RUDOLF SCHNITZLER (1, 3), HERBERT SEIFERT (2)

Draghi [Drago], Bernardo [Bernardino] (d Siena, 29 June 1592). Italian composer. He was a pupil of Andrea Feliciani and worked at Siena Cathedral. The first record of his presence there is a payroll of 1576, in which he is listed among the clergy as a member of the minor orders. By 1582 he was singing in the choir, first as a soprano and later as a contralto; in 1586 he became one of the permanent choir singers. He published *Il primo libro delle villanelle a tre voci* (Venice, 1591), and his teacher included one piece by him in a volume of eight-part vesper psalms (1590*). K. BOSI MONTEATH

Draghi, Giovanni Battista (b c1640; d London, 1708). Italian composer, harpsichordist and organist resident in England, possibly a brother of Antonio Draghi; he was often referred to as 'Signor Baptist'. He was one of the Italian musicians taken to England in connection with Charles II's abortive plans for establishing opera in England, 'having at his Majesty's desire left the service of foreign princes'. Pepys heard him on 12 February 1667 and was very impressed:

Signor Baptista, who hath composed a play in Italian for the Opera, which T. Killigrew do intend to have up; and here he did sing one of the acts. He himself is the poet as well as the musician; which is very much, and did sing the whole from the words without any musique prikt, and played all along upon the harpsicon most admirably, and the composition most excellent. . . He pretends not to voice, though it be good, but not excellent.

Evelyn called him, on 28 January 1685, 'that excellent & stupendous Artist' and thought him one of the best harpsichordists in Europe. In 1673 he was put in over

the head of Matthew Locke as first organist of the queen's Catholic chapel at Somerset House. Roger North remarked:

M^r Matthew Lock . . . was organist at Somerset House chappell, as long as he lived; but the Italian masters, that served there, did not approve of his manner of play, but must be attended by more polite hands afterwards Sig^r Babbista Draghe, used the great organ, and Lock (who must not be turned out of his place, nor the execution) had a small chamber organ by, on which he performed with them the same services. Draghi composed the instrumental entries and dances for Shadwell's adaptation of Shakespeare's *The Tempest* (1674) and the following year contributed the instrumental music before and between the acts, as well as the entries, to Shadwell's *Psyche*: all of these were omitted from Locke's published scores of his own music for these entertainments. Shadwell in his libretto of *Psyche* referred to Draghi as 'Master of the Italian Musick to the King'. Draghi also wrote songs for plays Aphra Behn's *The City Heiress* (1682), the anonymous *Romulus and Hersilia* (1683), Tate's *A Duke and No Duke* (1684), Mountfort's *The Injur'd Lovers* (1688) and Harris's *The City Bride* (1696).

In 1687 Draghi was appointed organist to James II's private chapel at an annual salary of £100 and was for a time music master to the king's daughters, the princesses Mary and Anne. It was for the St Cecilia celebration of 1687 that he set Dryden's famous *Song for St Cecilia's Day* ('From harmony, from heavenly harmony'). In 1695 his name ('Mr. Baptist') was in the list of teachers for a projected royal academy, and his song for Princess Anne's birthday was performed at York Buildings, London, on 24 February 1697. Benefit concerts were given for him there in 1698 and 1701. Also in 1698 William III awarded him an annual pension of £100 'in consideration of near 30 years service in the royal family and of his being incapacitated by the gout'. Queen Anne confirmed the pension on her accession in 1702 and on 28 July 1708 granted £25 to 'Sibilla Baptiste Draghi for the funeral of John Baptiste Draghi'.

It was perhaps through contact with Draghi, the elder Matteis and Pietro Reggio that Purcell made his first acquaintance with Italian music. But whether Draghi may truly be regarded as — to quote the preface to Purcell's sonatas of 1683 — one of 'the most fam'd Italian Masters' is very doubtful, although he did help to establish the 'seriousness and gravity' of the Italian style at a time when French influence was still strong in England. As an example the song 'Where art thou god of dreams' from *Romulus and Hersilia*, published in *The Theater of Music* (RISM 1686³), may be cited, especially the ground-bass section. Elsewhere the harmonic richness of his style is not always effectively handled, though there are numerous light and pleasing airs in the idiom common in England at the time. His keyboard suites begin with the customary sequence Prelude-Allemande-Courante-Saraband and finish with two further movements variously called 'Aire', 'Jigg', 'Round O', 'Bore', 'Minuet' and so on. They are similar in style to Purcell's suites and by no means inferior to them.

IAN SPINK

Dragma (It.). A double-stemmed semibreve found in musical manuscripts of the late medieval period (see J Wolf: *Handbuch der Notationskunde*, i, Leipzig, 1913/R1963, p.329) and mentioned by some theorists (*F-Psg* 1257, Philippus de Caserta, Anonymus X in *CS*, iii, etc). The term is presumably a theorist's invention, possibly from the Greek *drachmē* (It. *dramma*, a small coin, eventually 'dram'). The note may have more than one meaning even within the same composition. It was usually reckoned as the top half of one note joined to the bottom half of another, and its effect was usually that of reducing a semibreve to a value that could not ordinarily be expressed by a single symbol. In some sources it implies a pause (fermata) or indicates syncopation. The *dragma* should not be confused with other double-stemmed notes in later German keyboard tablatures, where the downward stem indicates chromatic alteration (Wolf, ii, 1919, p.12)

JOHN MOREHEN

Drago, Bernardo. See DRAGHI, BERNARDO.

Drăgoi, Sabin V(asilie) (b Selște, Arad district, 6 June 1894, d Bucharest, 31 Dec 1968). Romanian composer and ethnomusicologist. From 1918 to 1919 he studied harmony in Jassy with Zırza; he attended the Cluj Conservatory (1919-20) as a pupil of A. Bena (theory) and H. Klee (counterpoint), and then studied composition with Novák, conducting with Ostrčil and history with Krupka at the Prague Conservatory (1920-22). After teaching music in Deva from 1922 to 1924, he was lecturer in harmony (1924-42) and director (1925-43) of the Timișoara Conservatory, he then taught harmony and composition at the Cluj Conservatory (1943-5), was rector of the Timișoara Institute of Arts (1949-50) and taught folk music at the Bucharest Conservatory (1950-52). In collaboration with G. Breazu he wrote a series of school textbooks in which music education was grounded in folksong. Drăgoi himself had been brought up in the country, and he often returned to collect folksongs, publishing several noted scientific collections. Towards the end of his life, as director of the Folklore Institute of Bucharest (1950-64) and a member of the International Folk Music Council (1957-68), he made several analytic studies on the symmetry and harmony of folk music.

Peasant music formed the source for a large part of Drăgoi's creative output; at first this consisted largely of choral music (he conducted several choirs in Timișoara during the period 1924-40), but he also composed extensively in other genres. Drăgoi was attracted above all to the most archaic Romanian folk music, the

colinde, laments and wedding songs, although he also made use of peasant dances in his fast movements and in the many piano miniatures. His deep roots in folk music enabled him to achieve a rare degree of objectivity in expressing the shared sentiments of the Romanian people. Melody, always formally close to that of peasant models, is of principal importance in his work. A master of the small form, he generally cast his extended works as suites, with little development or variation. His opera *Năpasta* ('The plague') was a major contribution to the formation of a Romanian repertory; it is a paradigm of Romanian music in the inter-war period.

WORKS

(selective list)

DRAMATIC AND ORCHESTRAL

- Năpasta* [The plague] (opera, S. Drăgoi, after I. L. Caragiale), 1927, rev. 1958, Constantin Brăncoveanu (opera, S. Tudor), 1929; *Kir Ianulea* (opera, R. Urlăanu), 1937, Horia (opera, S. Drăgoi), 1945, *Mitrea Căcor*, film score, 1952, *Ciocirlia*, film score, 1954; *Păcală* (children's opera, Drăgoi), 1956

VIOREL COSMA

Dragonetti, Domenico (Carlo Maria) (b Venice, 10 April 1763; d London, 16 April 1846). Italian virtuoso double bass player and composer. His father, Pietro, was probably a barber from a poor family. Some sources say he played the double bass and guitar, which Domenico practised in secret. The young Dragonetti picked up some knowledge of the violin from a shoemaker, Sciaradori, and applied these basic principles to the bass. At the age of 12 he studied with Michele Bernini, and at 13 was appointed principal bass at the Opera Buffa in Venice. At 14 he held the same position at the Grand Opera Seria and later succeeded Bernini at the ducal chapel at St Mark's. A close friend in Venice was the violinist Nicola Mestrino, and together they passed many hours experimenting with 'scientific and accurate exercises on the violin and double bass' and composing *capricci* and other short pieces.

On 16 September 1794 Dragonetti left Venice for London, where he was to work for over half a century.

His first engagement was at the King's Theatre, Haymarket, where as 'double bass at the harpischord' he received '£250 and benefit'. Later he played in numerous concerts in and around London. In 1798 he visited Haydn in Vienna, where he returned in 1808 and made the acquaintance of Beethoven and Sechter. According to Thayer Dragonetti played Beethoven's Cello Sonata op.5 no.2 with the composer, who, after the final arpeggios, embraced both performer and his bass.

Domenico Dragonetti with his three-string double bass watercolour portrait by ? George Richmond (1809-96) (collection of the late Rembert Wurlitzer)

From 1804 he again appeared regularly in music festivals in England. He became renowned throughout Europe for his performances with the cellist Robert Lindley over a period of more than half a century, so great was their reputation that no major musical gathering was considered complete without them. Dragonetti used a large three-string bass which he normally tuned at orchestral pitch, and according to one listener 'in his hands it was like a tamed lion, which having lost its ferocity, retained all its strength and grandeur'. Another listener remarked in 1823, 'Dragonetti remains supreme, and uses his instrument as Jupiter his bolts now hurling the thunder, and now glancing the innocuous lightnings of heaven - for thus only can we describe the alternate succession of his powerful and delicate execution.' Called 'Il Drago' by his friends, he was a keen player of whist and a lover of good food, and was close over money matters. His fees were among the highest of the day, being frequently double or treble

those paid to the rank and file musicians. In his hotel room at Leicester Square 'there were half a dozen basses, several violins, violoncellos, harps, guitars, etc, etc, with innumerable curiosities, antique furniture, pictures, prints, and, above all, some dozens of dolls dressed in costumes of various countries'. Among his acquaintances were Paganini, Spohr, Hummel, Liszt, and Rossini, who wrote to him as 'Sigr. Dragonetti. Sole Professor of the Double Bass & Connoisseur of Pictures. London.'

On his death he bequeathed his manuscripts and his extensive music library to his close friend Vincent Novello. The British Museum now possesses ten manuscript volumes of works by him for double bass, both solo and with piano or orchestral accompaniment, and in addition at least eight concertos (some fragmentary or wanting orchestral parts), over 30 string quintets with double bass, other chamber works and some duets and songs.

RODNEY SLATFORD

Dragoni [Draconi], **Giovanni Andrea** (b Meldola, nr Forlì, c1540, d Rome, Dec 1598) Italian composer. He spent most of his working life in Rome. That he studied with Palestrina can be established from the dedication of his first madrigal book of 1575, in which he paid tribute to his former teacher. From June 1576 until his death he was *maestro di cappella* at St John Lateran. Except for a posthumously published book of motets his sacred output was primarily in the Lateran manuscripts, many of which have been lost. A list in manuscript 58, a collection of lamentations by Annibale Stabile and Dragoni, records those manuscripts that once formed the central core of the music archive. Among the volumes mentioned is an autograph collection of *Magnificat* settings by Dragoni. On f 69 of the *Liber Introit. et Exit Capp. Ann 1582* is recorded a payment of 77 scudi in January of that year to 'Gio Andrea' for the copying of six books of motets, five of which appear to have been lost. In addition to his duties at St John Lateran, Dragoni was appointed by Cardinal del Monte, after Palestrina's death in 1594, to a commission charged with appraising the work already done on the revision of the liturgical chant.

In his early works clarity of declamation and the avoidance of extensive word-painting seem to have been Dragoni's chief artistic concerns. In this respect he showed himself a true student of the style of Palestrina. His later secular works, however, show the impact of Marenzio's motivic style of counterpoint and reflect the contemporary trend towards melodic concentration in the upper parts with the resultant polarity between soprano and bass. The two sections that he contributed to the *Missa Cantantibus organis Caecilia*, a collaborative setting by the *maestri di cappella* of the major Roman chapels during the last decade of the 16th century, use the increasingly fashionable polychoral style.

PATRICIA ANN MYERS

Dragoumis, Marc (b Athens, 18 Dec 1934) Greek musicologist. He studied the piano at the Athens Conservatory and with Papaioannou at the Hellenic Conservatory where he graduated in 1962. He also studied Byzantine music privately with Simon Karas and at the Piraeus Odeon, where he graduated in 1961. From 1962 to 1964 he continued his Byzantine studies under Egon Wellesz at Lincoln College, Oxford. In 1960 he began working on Greek ethnomusicology at the Melpo Merlier Centre for Greek Folk Music Studies and from 1970 he has been professor of music history at the Athens Conservatory. Dragoumis has been chiefly occupied with modern Greek folk music, Byzantine and neo-Byzantine ecclesiastical chant; in several of his publications he has attempted to show the interrelationship of these traditions.

DIMITRI CONOMOS

Drake, Earl R(oss) (b Aurora, Ill., 26 Nov 1865, d Chicago, 6 May 1916). American violinist and composer. He studied in Chicago and Cincinnati, graduating in 1885, and after further studies in New York went to the Berlin Hochschule für Musik as a pupil of Joachim. On his return to the USA he founded the Violinists' Guild, formed his own quartet and toured widely. From 1893 to 1897 he was head of the string department of the Gottschalk Lyric School in Chicago; in 1900 he organized there the Drake School of Music. He composed the operas *The Blind Girl of Castel-Cuillé* (Jacques Jasmin, translated by Longfellow; performed

in Chicago in 1914) and *The Mite and the Mighty* (performed in Chicago in 1915); the *Brownie Suite* (1905), a *Dramatic Prologue* (1915) and *Ballet* for orchestra; *Gypsy Scenes* for violin and orchestra; and a number of works for violin and piano. He also wrote a number of articles on bowing, violin tone and the 'Joachim method'.

H. WILEY HITCHCOCK

Drake, Erik (b Föllingsö, Östergötland, 8 Jan 1788; d Stockholm, 9 June 1870). Swedish composer and teacher. He studied at the University of Uppsala from 1804 to 1808, and subsequently worked there for two years as an amanuensis at the observatory. Later he passed an examination in law and entered the government service, but he soon retired to his estate at Föllingsö where he devoted himself to the study of folklore and folk music, partly in close collaboration with Råaf. Of great importance to his development as a musician was his friendship with the composer Joachim Nicolo Eggert. In 1822 he was elected a member of the Swedish Royal Academy of Music, he was its inspector of education in 1834, its secretary in 1841 and its librarian in 1849. He taught theory at the conservatory (1826-59) and was promoted to professor in 1830; during his last years at the conservatory he wrote a number of pedagogical works. Owing to failing eyesight he retired in 1860, he was blind for his last eight years.

Drake was a prolific and skilled composer, whose works show the influences of the Viennese Classicists and Schubert. He was especially important as a theorist and teacher, his pupils numbering about 2000; his *Elementar-cours i Harmonie-läran* (1839-40) was widely used. Among his translations of works from the German were Seyfried's *Ludwig van Beethovens Studien im Generalbass* (1832) and Zöllner's *Organ-Schule* op. 71. He also arranged the melodies in several collections of folksongs, including A. I. Arwidsson's *Svenska folksånger* (1834-42) and A. A. Afzelius's *Afskåd af svenska folkskärpan* (1848), and he edited the music to P. A. Söndén's *Valda skrifter af C. M. Bellman* (1836-7).

Drama per musica. See DRAMMA PER MUSICA.

Dramatic opera. See SEMI-OPERA.

Drame lyrique (Fr.: 'lyric drama'). A term sometimes used to distinguish a genre of late 19th- and early 20th-century French opera that is usually seen as having grown out of the more serious sort of *opéra comique*, though often with little or no spoken dialogue. Epitomized by many of the operas of Massenet, the *drame lyrique* encompassed a wide variety of subject matter from the contemporary to the historical. It was

more intimate in scope and dramatic treatment than grand opera, and richer in musical style than the simpler and lighter sort of *opéra comique*. The term was not widely used as a genre designation on librettos: of Massenet's operas only *Werther* is called a *drame lyrique*, but others have similar designations, such as *pièce lyrique*, *épisode lyrique*, *conte lyrique*, *comédie lyrique*, *drame musical* or *drame passionnel* which reflect a sense of closeness to the spoken drama and to other literary genres (Charpentier's *Louise* is called a *roman musical*).

Dramma giocoso (It.: 'jocular drama'). A term used on Italian librettos in the second half of the 18th century to designate a comic opera of a particular type. It was used, from 1748 onwards, by Carlo Goldoni for librettos in which character-types from serious opera ('parti serie') appeared alongside the standard peasants and servants of comic opera ('parti buffe'), sometimes also with intermediate characters ('in mezzo carattere'). He referred to the type in his preface to *I portentosi effetti della Madre Natura* (1752) and in *De gustibus non est disputandum* (1754). Notable early examples of the genre are *Il filosofo di campagna*, set by Galuppi in 1754, and *La buona figliuola* (1756; set by Piccini in 1760); three further Goldoni *dramma giocoso* texts, *Il mondo della luna*, *Le pescatrici* and *Lo speziale*, were later set by Haydn. The most famous example of the genre is Mozart's *Don Giovanni*, to a libretto by Da Ponte based on an earlier one (also entitled 'dramma giocoso') by Giovanni Bertati.

For a discussion of Italian comic opera in the 18th century, see **OPERA**, §II,3.

Dramma [drama] **per musica** (It.: 'play for music'). A phrase found on the title-page of many Italian librettos; it refers to a text expressly written to be set by a composer (e.g. *L'Erismena, drama per musica di Aurelio Aureli, Favola Seconda dedicata all'illustriss. Signor Giacomo Cavalli* . . . *M DC LV*). But by some later writers the words are misinterpreted in the sense 'drama through music' and applied to musico-dramatic effects achieved by the composer.

Dranishnikov, Vladimir Alexandrovich (b St Petersburg, 29 May 1893; d Kiev, 6 Feb 1939) Russian conductor, pianist and composer. In 1909 he graduated in preceptorship from the court chapel and studied at the St Petersburg Conservatory with Lyadov and Shteynberg (composition) and Nikolay Tcherepnin (conducting). In 1914 he was engaged as pianist and leader of the orchestra at the Mariinsky (now Kirov) Theatre where he was conductor from 1918, and musical director from 1925 until 1936. A talented opera conductor, he achieved a sensitive integration of voices and orchestra to dramatic as well as musical purpose. Under his direction the theatre staged notable productions of Prokofiev's *The Love of Three Oranges*, Berg's *Wozzeck* and Musorgsky's original version of *Boris Godunov* between 1926 and 1928, and the première of Asaf'yev's ballet *Flames of Paris* in 1932. In 1936 he became artistic director and chief conductor at the Kiev Opera, where he staged a number of operas by Ukrainian composers. He appeared as symphonic con-

ductor and pianist, composed several works, and wrote articles on the problems of operatic dramaturgy and the arts. He was made Honoured Artist of the RSFSR in 1933.

I M YAMPOL'SKY

Draper, Charles (b Odcombe, Somerset, 23 Oct 1869; d Surbiton, 21 Oct 1952). English clarinettist. He was brought up by his eldest brother Paul after the early death of their father Samuel, a cellist. His brother gave him his first clarinet lessons and in 1888 sent him to study with Henry Lazarus. After winning an open scholarship to the RCM, he continued with Lazarus until he retired, and then spent a year with Julian Egerton. The playing of Manuel Gomez inspired him to change from simple- to Boehm-system clarinets. His tone on these was rich, his tonguing brilliant and his phrases always beautifully shaped. Draper made more gramophone records at this early period than any other clarinettist, and his later recordings of Brahms (including the Clarinet Quintet with the Léner Quartet) are considered masterpieces.

Draper joined the Crystal Palace Orchestra in 1895. He played in Queen Victoria's private band, and had long associations with the Leeds and Three Choirs Festival orchestras, also with the Philharmonic Society, for whom he gave the first performance of Stanford's Clarinet Concerto in 1904, under the composer. Stanford dedicated his Clarinet Sonata to Draper and Oscar Street (a talented amateur clarinettist). In 1905 Draper, with John Saunders and Eli Hudson, founded the New SO. Draper was a magnificent teacher and through his pupils (the most notable was Thurston) had a profound influence on English clarinet style. He taught at the Guildhall School of Music from 1895 to 1940, as well as at Trinity College and the RCM. His son Paul Beaumont Draper (1898-1971) was a distinguished bassoonist.

PAMELA WESTON

Draper, Haydn (Paul) (b Penarth, Glam., 21 Jan 1889; d London, 1 Nov 1934). English clarinettist, nephew of Charles Draper. Trained by his father Paul, he had already won prizes and played professionally when he gained an open scholarship to the RCM in 1908. Here he studied with Julian Egerton and with his uncle Draper became first clarinet in the Queen's Hall Orchestra, and solo clarinet for the BBC military band, where his extraordinary virtuosity won admiration. He was a member of the London Wind Quintet, and made many fine solo recordings. From 1923 he taught at the RAM, where his pupils included Reginald Kell.

Draudius [Draud, Draut], **Georg** (b Dauernheim, Hesse, 9 Jan 1573; d Butzbach, Hesse, 71635). German clergyman, scholar and bibliographer. After studying theology at Marburg, he was an editor for Nicolaus Basse's publishing house, first in Frankfurt am Main (1590-91) and later at the Herborn branch. From 1592

to 1599 he worked for the Verlag-Sigmund-Feyerabend-Erben, which was also in Frankfurt. He subsequently worked as a parish minister in Hesse, at Gross-Karben in der Wetterau (1599–1614) and Ortenberg (1614–25) and finally, as his father's successor, at Dauernheim (1625–35). Because of the Thirty Years War he left for Butzbach in 1635. In his own day he was best known for his numerous theological tracts and writings on Aristotelian philosophy, but his importance now lies in his bibliographies. These maintain the tradition of Frankfurt book fair and dealers' catalogues, including Bassé's *Collectio in unum corpus omnium librorum* (1592) and particularly Johann Cless's *Unius seculi . . . elenchus consummatissimus librorum* (1602), whose purpose was to list all books currently available in the city. Draudius's sections on music are, however, much more extensive than those in his models, though his citations are often unreliable. This is largely because of his sources of information – fair and dealers' catalogues which made him inconsistent about giving the publisher (the name of the Frankfurt dealer is sometimes substituted) and the date of publication, and led him to include ghosts and volumes listed under incorrect titles. His practice of abbreviating the titles and, in the *Bibliotheca classica*, translating them into Latin lessens the value of his work. Nevertheless, his three huge bibliographies remain valuable sources of information about editions now lost and about the nature and extent of the international book trade based in Frankfurt, the most important centre for northern Europe.

M E C BARTLETT

Drdla, František [Franz] **Alois** (b Žďár nad Sázavou, Moravia, 28 Nov 1869; d Bad Gastein, Austria, 3 Sept 1944). Czech composer and violinist. He studied with Bennewitz (violin) and Foerster (composition) at the Prague Conservatory (1880–82), and with Hellmesberger (violin), Krenn and Bruckner (composition) at the Vienna Conservatory (1882–8). After a period as a violinist at the Viennese Royal Opera (1890–93) he was leader and director of the orchestra at the Theater an der Wien (1894–9). Subsequently he made concert tours of Europe (1899–1905) and the USA (1923–5). As a composer he gave most attention to salon music, in which he elegantly mixed Czech melody with late Romantic cliché in the *art nouveau* spirit of the time. His light pieces achieved international popularity, as did his fantasias on folksongs, and their success overshadowed his work in operetta and serious music.

OLDŘICH PUKL

Dream. Descriptive title given to a handful of instrumental pieces in 17th-century English sources. The best-known of them, *Giles Farnahys Dreame* (in the Fitzwilliam Virginal Book, no.[194]), is a simple pavan in form and style and is followed in the MS by *His Rest Galiard* and *His Humour*. *The Marchants Dreame* (in Will. Forster's Virginal Book, p.170; anon.) begins like a galliard, with an eight-bar strain plus varied repeat but thereafter lapses into a dream-like incoherence of structure. A lute piece in *GB-Cu* Dd.2.11, f.48, simply entitled *A dreame*, is in effect a pavan of three strains without varied repeats.

The tune *Barafostus Dream* occurs in several lute and keyboard MSS. It was so called on account of its association with a broadside ballad of the same title and is thus not quite in the same category as the three pieces mentioned above. There are two settings of the tune in the Fitzwilliam book, one (no.18) anonymous and the other (no.[131]) by Thomas Tomkins.

Herbert Howells revived the use of the title in his two collections *Lambert's Clavichord* (1928) and *Howells's Clavichord* (1963)

ALAN BROWN

Dreaper. See RUSHWORTH & DREAPER.

Drechsel. See DRETZEL family.

Drechsler. See DRESSSEL family.

Drechsler, Joseph (b Vlachovo Bržďi, nr. Strakovice, 26 May 1782; d Vienna, 27 Feb 1852). Bohemian composer, conductor and organist active in Austria. After early musical training from his father, a Kantor and schoolmaster, he became a chorister in Passau and studied at the Benedictine monastery in Florenbach, later again in Passau and finally in Prague. In 1807 he moved to Vienna in response to an invitation to join the Theater in der Leopoldstadt, but he decided instead to maintain his independence by teaching, composing and studying. He became a répétiteur at the Court Opera in 1810, and in 1812 (or 1814) was appointed assistant Kapellmeister. The Court Opera's reduction in personnel obliged him to spend a period as conductor at Baden and Bratislava; following this 'gypsying about', as he called it, he was appointed organist at the Servitenkirche in Vienna in 1815. At the same time he opened a music school, where his pupils later included Johann Strauss (ii). He became choirmaster at St Anna's in 1816 and at the Pfarrkirche am Hof in 1823; in 1844 he was appointed Kapellmeister of St. Stephen's Cathedral.

In 1821 Drechsler was made a conductor at the

Theater in der Josefstadt, where his score to Meisl's *Das Bild des Fürsten*, together with Beethoven's *Die Weihe des Hauses*, was performed on 3 October 1822 to celebrate the reopening of the theatre; in July of the following year, Beethoven recommended Drechsler to his pupil the Archduke Rudolph. From 1824 to 1830 Drechsler was chief conductor and composer at the Theater in der Leopoldstadt, for which he composed many scores. But although he continued to write the music for Singspiels and farces after 1830, he devoted himself mainly to his church duties and to teaching.

Highly regarded in his day for his theoretical works (which include an organ tutor, a harmony and thorough-bass course, a set of guidelines on the art of preluding and a revised edition of Pleyel's piano tutor), Drechsler is now remembered most for the music he wrote for three of Ferdinand Raimund's plays, in particular *Das Mädchen aus der Feenwelt* with its haunting duet 'Brüderlein fein', the melody of which is by Raimund himself.

Drehleier (Ger.) HURDY-GURDY

Drehorgel (Ger.) BARREL ORGAN.

Dreiklang (Ger.). Literally, any three-note chord, the term is usually applied to a TRIAD.

Drei Masken Verlag, German firm of music publishers. It was founded on 24 November 1910 in Munich by the composer Ludwig Friedman. In the year 1912 it moved to Berlin, and was taken over in 1930 by Victor Alberti and A. L. Robinson, except for the literature department, which had returned to Munich in 1920. Among the musicological works that the Munich branch published were *Musikalische Stundenbücher*, H. W. von Waltershausen's *Musikalische Stillehre in Einzeldarstellungen*, Guido Adler's *Richard Wagner*, the *Sammelbände für vergleichende Musikwissenschaft* (ed. Stumpf and Hornbostel), the first two volumes of the *Mozart-Jahrbuch* (ed. H. Abert), A. Sandberger's *Ausgewählte Aufsätze zur Musikgeschichte und Faksimiledrucke berühmter Musiker-Handschriften*.

The Berlin branch published mainly operas, operettas

and ballets as well as dance, popular and film music. Opera and ballet composers published by the firm included Eugen d'Albert, Walter Courvoisier, Friedrich Klose, Franz Schmidt and H. W. von Waltershausen; light music was represented by works by Leo Blech, Leo Fall, Jean Gilbert, Emerich Kálmán, Walter Kollo, Eduard Künneke, Robert Stolz and Oscar Straus. After the firm's liquidation in 1934 on racial grounds, the Dreiklang-Verlag took over the Drei Masken Verlag and its affiliated firms. During World War II the name Dreiklang- Dreimasken Bühnen- und Musikverlag was introduced. After the loss of the Berlin premises in 1943 due to war damage, the firm re-established itself in Wiesbaden on 1 January 1949; on 1 July 1957 it moved to Munich. The business is now part of an important publishing group which includes the UFA Music Press, the Wiener Bohème Press and the Ufaton Press (all based in Munich). There is still a separate firm in Munich under the name Drei Masken Verlag which publishes plays

EMIL KATZBICHLER

Dreiser, Paul. See DRESSER, PAUL.

Dresden. City in the German Democratic Republic, in Saxony. Originally a Germanic settlement on the Elbe, from about the 7th century to the 10th it was inhabited and ruled by Slavonic Sorbs. It then passed to the jurisdiction of the margraves of Meissen. Missionaries undertook the conversion of the Sorbic population, and Dresden had its first church during the mid-12th century. In an attempt to consolidate the dynastic power of the Wettins, and to colonize the country further, Margrave Dietrich founded many towns, including Dresden, near the site of the original Sorbic village. The city was systematically planned around the margraves' castle (1200), and was vested with Magdeburg law.

1 Churches and schools 2 Municipal music (to 1872) 3 Music at court 4 The development of middle-class music in the 18th century 5 1815 1914 6 From 1914

1 CHURCHES AND SCHOOLS. The Frauenkirche, Dresden's first church, was dedicated to the Virgin ('Zu unserer lieben Frau'), and stood in the Sorbic village on the left bank of the Elbe. It seems to have been founded after 1142 by Margrave Dietrich, and although outside the town walls it remained the parish church until 1539. Presumably pliant was sung there at the time of its foundation. At the end of the 13th century the church was surpassed in size and magnificence by the Nikolaikirche. There are records of masses at the Frauenkirche from the early 14th century and in 1556 and 1616 the organ was rebuilt. From 1559 until 1896 music was performed jointly with the pupils of the Kreuzschule, but in 1897 the Frauenkirche was given its own precentorship and a boys' choir was formed which was active until World War I; this was followed (1925-45) by a mixed choir initiated by the Kantor, Erich Schneider. The church had its own organists from 1601, and the last of these (to 1945) was Hanns Ander-Donath. The medieval church (where Schütz was buried in 1672) was replaced in 1726 by one designed by George Bähr, the zenith of Lutheran church architecture in Germany (see fig.1). Gottfried Silbermann's great

organ was installed between 1732 and 1736 and on 1 December 1736 Bach performed on it in the presence of the court. T. C. Reinhold composed festal cantatas for the laying of the cornerstone in 1726 and for the inauguration of the church (1734) and the organ (1736). The church was destroyed in 1945.

The Kreuzkirche, dedicated to St Nikolai, was founded before 1216 as a market church. After 1234 Margrave Heinrich der Erlauchte donated a splinter from the Cross, which was venerated in the Capella Sanctae Crucis, added to the Nikolaikirche probably after 1260. This encouraged pilgrimages and indulgences and drew attention to the need for a school in which to train choristers for the chapel's altar services, although it is not certain when such a body was founded. In the 14th century the name of the Kreuzkapelle was gradually taken over by the Nikolaikirche (hence later known as the Kreuzkirche), and the choir school, which served the whole church, came to be called the Kreuzschule. At some date after 1350 it passed into the administration of the town council. In 1398 one of Dresden's patricians established a trust requiring the boys to sing the *Salve regina* and *O crux ave spes* every evening at sunset. Singing of the *Salve regina* continued until the Reformation. The performances were directed first by the rector and then by his *collaboratores* or *locati*. It was only after the Reformation that 'Cantor' became an official title.

The first notable rector of the Kreuzschule was Petrus Dresdensis (1409–12). A staunch representative of Hussite Utraquism, he was expelled from the diocese of Meissen in 1412 and retired to Prague, before being burnt as a heretic in Regensburg in 1421. It was traditionally believed at the Kreuzschule that Petrus Dresdensis was the author of a number of songs including *In dulci jubilo*, *Puer natus in Bethlehem* and *Quem pastores laudavere*; this was supported by early writers on music (for example, Printz in *Sing- und Kling-Kunst*, 1690) and the belief persisted to the 19th century, but is now doubted. It is equally unlikely that he was the composer of three-part polyphonic settings, as was claimed in the mid-16th century by Johann Matthesius. Luther's first biographer The choristers of the Kreuzschule must have sung polyphony as early as 1500 and on 6 July 1539 they took part in the first Lutheran service in the Kreuzkirche, performing polyphonic settings of the Introit, Kyrie, Gloria, Alleluia and *prosa* of the Holy Trinity. From about 1480 they had also performed on the annual Midsummer Day festivities, which, together with the feasts of the Invention of the Cross (3 May) and Exaltation of the Cross (14 September), was the most important of Dresden's feasts of indulgence. From 1498 onwards they were also involved in the annual St Dorothea's Day play and from 1473 they accompanied the annual Corpus Christi procession with performances of *O quam suavis* and *O sacrum mysterium*. The school was divided into a number of choirs, the poorer boys in particular having to earn their fees by singing in the streets, a custom which was not abolished until 1848. The custom of singing at funerals was maintained after the reorganization of the school in 1539, when as a result of the Reformation only the Protestant Mass, the weekly sermons and Vespers were retained from the liturgy. The choir was joined by adult assistants in 1559, about the same time as the *Stadtpfeifer* began to take part in the service.

1 Interior of the Frauenkirche, Dresden (with Gottfried Silbermann's organ of 1736), destroyed in 1945

The earliest documentary evidence of an organist dates from 1370, while *organae*, presumably connected with the 'large organ' (attested c1420) and the 'small organ' (1462), were mentioned in 1371. The medieval building was burnt down in 1491, and was replaced by a new Late Gothic church, consecrated in 1499; its organ, installed in 1512, was demolished in 1729 and a second organ, added some time after the first, was removed in 1662. The church was burnt down again in 1760, and was once more rebuilt. In 1792 the Wagner brothers of Suhl installed a new organ which, following the fire of 1897, was replaced by a huge instrument made by the Jehmlich brothers of Dresden. The church was again burnt down in 1945 and, since 1963, has had a number of smaller instruments together with the large organ built by Jehmlich. Prominent organists at the Kreuzkirche have included G. A. Merkel (1859–64; he then became court organist), Alfred Sittard (1903–12), the blind organist Bernhard Pfannstiehl (1912–34) and the composer Herbert Collum (1934–). A number of the Kantors at the Kreuzschule were distinguished as composers, including Samuel Rühling (1612–15), Michael Lohr (1625–54), T. C. Reinhold (1720–55), G. A. Homilius (1755–85), C. E. Weinlig (1785–1813), C. T. Weinlig (1814–17), Julius Otto (1828–75) and Rudolf Mauersberger (1930–71). J. Z. Grundig (1713–20) was a singer in the Hofkantorei until 1697 and is responsible for manuscript copies of Schütz's three Passions and Peranda's *Markuspassion*. From 1717 to 1817 the choir of the Kreuzkirche functioned as an opera chorus, in which they were joined at the end of the 18th century by pupils of the Dreikönigsschule. Under

2. Kreuzkirche, Dresden: painting (1754) by Bernardo Bellotto in the Gemäldegalerie Alte Meister, Dresden

Otto Richter (1906–30), and above all Rudolf Mauersberger the Kreuzchor achieved a worldwide reputation comparable to that of the Leipzig Thomanerchor.

The Kreuzkirche was burnt down in a night of bombing on 13 February 1945, and the choir was without a home for ten years, even though it continued to perform from the summer of 1945. In 1955 the choir inaugurated the new Kreuzkirche with a performance of the *Dresdner Requiem* by Rudolf Mauersberger, their conductor, whose achievement during the postwar era was

3. Gottfried Silbermann's organ (1720) in the Sophienkirche, Dresden, destroyed in 1945

to raise the choir to a high level of excellence. In 1947 he revived the custom of taking the choir on tour, and in 1955 he founded the Heinrich-Schütz-Tage in Dresden at which the choir regularly performed. He was succeeded in 1971 by Martin Flämig.

The Sophienkirche, Dresden's third church, was that of the Franciscan monastery, founded by Heinrich der Erlauchte in 1265 and rebuilt in 1351. It is unlikely that polyphony was performed there before the monastery was secularized in 1539; however, there is a record of repairs made to the organ in 1421. The church stood unused from 1539 until 1599, when services there were resumed; from 1601 until 1695 the organists came from the Frauenkirche, and a new organ was built in 1622. From 1695 the church had its own organists. The most prominent of these were Christian Pezold (1703–33), W. F. Bach (1733–47) and Johann Gottlob Schneider (1825–64), all of whom performed on Silbermann's fine organ of 1720 (fig.3). The last organist of the Sophienkirche before its destruction in 1945 was Hans Heintze (1934–40). Following the closure of the Lutheran palace chapel in 1737, the Sophienkirche also functioned as the Lutheran court church until 1918. From 1610 until 1923 sacred polyphony was performed there by the choristers of the Kreuzschule.

In 1403 Margrave Wilhelm I granted civic rights to part of the oldest Sorbic village on the right bank of the Elbe, known as Altendresden. In 1404 he founded an Augustinian monastery there, which was sequestered in 1542. At the beginning of the 15th century a parish church 'Zu den heiligen drei Königen' (the Dreikönigskirche) was founded, which, like the Kreuzkirche, set up a choir school for its liturgical services. A schoolmaster is first recorded in 1431, and in 1465 a foundation required him and his pupils to sing the *Salve regina* once a day. The organ was rebuilt in 1489, 1504 and 1606. The parish school assumed the status of a municipal Lateinschule following the Reformation (1539). In 1543 its rector was joined by a Kantor and the following year an organist was engaged as the third member of staff. Paul Preschner (c1538–86) was one of the rectors who was also active as a composer, but the best-known Kantor was Joseph Schlegel (1529–93), whose fame rests chiefly on his *Passio germanica* and his motets. In 1549 Ambrosius Erich, a composer and Dresden's official treasurer, wrote to inform the town council of Altendresden that it was to be incorporated into the capital. Following the city fire of 1685 the town and church were rebuilt and that quarter of the town was renamed Dresden-Neustadt; a new organ was installed in 1711. The church was replaced by a vast new Baroque structure in 1731, and a new organ was fitted in 1754. At the end of the 18th century the choristers of the Lateinschule formed an opera choir, which usually performed at the Theater auf dem Linckeschen Bade; they also regularly sang for alms in the streets. Otto Kade, Kantor at both the school and the church from 1853 to 1860, was of considerable importance as a music historian. In 1877 the office of choir trainer was separated from the school, which retained the name Dreikönigsschule. This and the Baroque Dreikönigskirche were destroyed by fire in 1945.

In 1563 the town council established a 'German school' (i.e. one with no Latin instruction) in the Bartholomäushospital, founded in the 13th century as the Heilig-Geist-Hospital (from the 14th century it included a chapel dedicated to St Bartholomew). From

about 1334 the chapel had its own chaplain and in 1519 it was replaced by a new building with a gallery and positive organ. The school was founded to provide singers to take part in funeral services at the hospital cemetery, as the Kreuzchor no longer fulfilled that function, and also to perform in church services. By 1578 the Bartholomäuskirche was no longer large enough and was replaced by the Annenkirche, named after the Electress Anna. The choristers of the Kreuzkirche joined with the Stadtpfeifer in performing Clemens non Papa's six-part *Jubilare Deo* and Lassus's six-part *Te Deum patrem*, a notable example of vocal instrumental performance. In 1618 the school became a municipal Lateinschule and in 1724 a lyceum; a period of decline then followed until it was reorganized in 1851 as a secondary and in 1884 as a grammar school, it occupied a prominent place among Dresden's schools until its closure in 1945. The students' choral duties, including their custom of singing for alms, remained unchanged until 1828; after 1828 their duties decreased as those of the student teachers of the Dresden-Friedrichstadt training college and of the Stadtpfeifer grew. The old Annenkirche was burnt down in 1760 but by 1769 was replaced by a splendid new Baroque church, which acquired a new organ in 1782; the church survived World War II.

The Matthäikirche, a simple Baroque church, was built in Dresden-Friedrichstadt and consecrated in 1730. Bells were added in 1732 and an organ in 1737, the latter coming from the secularized Lutheran palace chapel; it had been built by Gottfried Fritzsche to Hassler's specifications and remained in use until 1861, the façade surviving until 1945. The new organ of 1882 was used until the church was destroyed in 1945; rebuilding of the church began in 1975. From the beginning of the 19th century Kantors and organists were also teachers at the Friedrichstadt teacher-training college.

2 MUNICIPAL MUSIC (TO 1872) The beginnings of municipal music-making in Dresden are obscure. As elsewhere, the Turner (or 'Hausmann') of the Kreuzkirche was supposed not only to sound the alarm in times of fire and war, to act as bell-ringer and, later, as time-keeper, but also to blow a horn several times a day. The earliest evidence of any regular artistic musical activity in the town was the order issued around 1420 whereby three wind players were required to perform 29 times a year on major feasts, standing by the Kreuzkirche great organ. In 1522 the Leipzig Stadtpfeifer were specially engaged for the Midsummer Fair. The Dresden Stadtpfeifer were reorganized in 1572, when four wind players were entrusted with performing a four-part work from the tower, not only carrying out their usual guard duties but also helping 'to strengthen and enhance' the Kreuzchor with their playing on feast days, Sundays and at weddings and other occasions when polyphony was performed. In 1606 the group included crumhorns, recorders, flutes, dulcians, trumpets and cornets. For the emperor's visits in 1617 and again in 1662 they were commanded to perform with the Stadtpfeifer from neighbouring Meissen, Pirna and Freiberg, although they often complained that their right to perform at family celebrations (e.g. weddings) was being compromised not only by these players but also by the musicians from the electors' court and local regiment, and by the town fiddlers. In 1675 the Stadtmusicus and the Kreuzchor were ordered to per-

form on each of the three high feasts for half an hour before the bells were rung; it was also agreed that he and his journeymen and apprentices should be responsible for church music in the Sophienkirche and Frauenkirche whenever the superintendent was preaching there, and, finally, he was expected to be in attendance once every six weeks at the church in Neustadt. Daniel Weber, Stadtmusicus from 1679 until 1735, used both wind and string instruments in the group, which then became the Stadtkapelle. At the beginning of the 19th century the religious duties of the Stadtkapelle extended at various times to the Kreuzkirche, Frauenkirche, Sophienkirche and Dreikönigskirche, with the addition from 1843 to 1863 of the Annenkirche and the Matthäikirche. At that time the Stadtkapelle had 24 members (15 in 1810; 24–30 from 1816), who also took part in performances of oratorios and other concerts given by Dresden choral societies such as the Dreyssische Singakademie, Liedertafel and Orpheus. The last Stadtmusikdirektor was Erdmann Puffholdt; when he resigned in 1872, the town council withdrew the post and the Stadtkapelle was dissolved. It was succeeded by the Gewerbehaus Orchestra (see §5).

3 MUSIC AT COURT

(i) *To 1694* The Meissen court of Margrave Dietrich der Bedrante (ruled 1197–1221), son-in-law of the instigator in 1206–7 of the Wartburg song contest, Landgrave Hermann of Thuringia, was an important centre of poetry and music. Walther von der Vogelweide spent the winter of 1210–11 there and Heinrich von Morungen remained there for a somewhat longer period, possibly as court poet. Under Dietrich's artistically gifted son Heinrich der Erlauchte (ruled 1227–88) the vast Wettin lands (Thuringia, the Meissen marches and Lower Lusatia) enjoyed a period of considerable economic and cultural prosperity, in which Dresden shared. He made Dresden his temporary home in 1255 and again from 1266, taking up permanent residence there in 1276. Dresden has retained the love of art, particularly of music, that he fostered.

Heinrich was himself a minstrel (six of his songs are in the Heidelberg Manesse Manuscript), and composed a number of sacred works. In 1254 Pope Innocent IV granted a licence for settings of the Kyrie and Gloria, which Heinrich had written specially for Annunciation services, to be used in church. It is probable that Tannhäuser, Reinmar von Zweter (in Meissen in 1234 and 1242–4) and Frauenlob (Heinrich von Meissen) spent some time at his court in Meissen and possibly in Dresden, as the didactic poets Heinrich von Freiberg and Heinrich von Mügeln probably did too. Heinrich der Erlauchte and his sons are thought to have commissioned Albrecht von Scharfenberg's *Der jüngere Titarel*, the continuation of Wolfram von Eschenbach's *Titarel* fragment. Margrave Heinrich presumably also entertained instrumentalists at his court, and the great tournaments at Nordhausen (1263), Meissen (1265) and Merseburg (1268) are unlikely to have taken place without wind players.

There are virtually no reports of court music in Dresden during the 14th century, when the margraves generally held court elsewhere. Furthermore, wars (1315–16) and the Black Death (1349) interrupted cultural life, though Flagellant songs were briefly heard in Dresden during the plague. According to contemporary records *fistulatores*, *vigellatores* and *tympanatores* were

at the court of Margrave Wilhelm I in 1386 (his permanent residence was in Dresden from 1382). The early decades of the 15th century continued to be artistically unproductive as a result of the Hussite and dynastic wars in Saxony. Dresden again became the Wettins' permanent residence from 1464, and until 1485 accommodated the two households of the brothers Elector Ernst and Duke Albrecht; the country was then divided and Dresden became the seat of the Albertine branch of the Wettins, which it remained until 1918. There is evidence of six trumpeters and five fifers at the ducal court in Dresden in 1470–71. There were also musicians at the court of Duke Georg (1500–39), probably wind players. About 1475 an organ from Memmingen was installed in the palace chapel. In 1506 the composer Matthias Eckel is mentioned as scribe to Duke Georg, but it is not known what connection he may have had with court music which under Georg must still have been largely undeveloped.

It was during the period between the Reformation (1539) and the coronation of Elector Friedrich August I as King of Poland in 1697 that sacred and secular music first achieved prominence at the Albertines' Lutheran court. The earliest permanent body of musicians there was doubtless the band of wind players. Duke Moritz (1541–53), elector from 1547, maintained eight or nine trumpeters and one timpanist, and Elector August (1553–86) nine or ten trumpeters and one timpanist. From about 1586 until after 1800 the band of trumpeters at the Dresden court consisted of at least 13 trumpeters and one or two timpanists (1629, 14 trumpeters; 1680, 19 trumpeters), used in both a musical and military capacity. From the 17th century it was the Dresden 'Oberkameradschaft' to which all the other German court and military trumpeters were subject. Its statutes were ratified by the 1623 Regensburg Reichstag and renewed in 1630 and 1646, in 1653 its constitution was increased from 11 to 22 articles and remained in force until 1831, when compulsory membership in guilds was abolished in Saxony. The Elector of Saxony was the 'Reichserzmarschall' and thus the highest representative of all German court trumpeters. After 1840 the Dresden court trumpeters were increasingly rarely called upon to perform in the orchestra and in 1918 they were disbanded. From the 16th century onwards chamber musicians were used as trumpeters in performances of polyphony.

Under Elector Friedrich der Weise (*d.* 1525) the Hofkantorei at the Ernestine residences of Torgau, Wittenberg, Altenburg and elsewhere reached a high standard of performance, but within two years of his death it was disbanded and the first period of large-scale musical patronage at the Wettin court came to an end. The tradition was revived, however, in 1548 when Elector Moritz founded a Hofkantorei in Dresden and appointed Johann Walter (*i.*), a singer and composer in the old Ernestine Kapelle, as its first Hofkapellmeister. The new Hofkantorei was generally involved only in church services, the form of which was prescribed by Duke Heinrich (1539–41) in 1539 and retained for some 200 years. Walter first introduced to Dresden the repertory of the Josquin era. He also performed works of his own and laid the foundations for the tradition of *historia* settings and performances which continued to flourish in the palace chapel until 1697 and in central Germany as a whole until the 19th century. His two passions were followed by settings by Scandello,

Christoph Bernhard (1663), Schütz (all three around 1665–6) and M. G. Peranda (1668); Scandello's Resurrection story was in turn followed by versions by Schütz (*c.*1660), Johann Müller (1676), J. W. Furchheim (1677) and N. A. Strungk (1690), while Rogier Michael's Christmas story set the example for similar works by Schütz (1623) and Peranda (1668). Walter's successors were Matthaeus le Maistre (1554–68), Scandello (1568–80) and G. B. Pinello di Ghirardi (1580–84) and it was under them that the tradition of performing vocal-instrumental works developed. The countless works by these three Kapellmeister as well as those by Michael (1587–*c.*1613) show a late Netherlands polyphonic technique, while Scandello's music is particularly characterized by its Renaissance-like coolness and clarity.

In 1548 the Kantorei numbered 19 singers (including choirboys) and one organist; in 1554 it had 25 members in addition to seven 'welsch' (meaning in fact Netherlands) musicians, and by 1606 it had risen to 47 singers and instrumentalists. In 1593 the instruments included violins, viols, flutes, shawms, horns, crumhorns, dulcians, cornetts, trumpets, trombones, drums, lutes and organs. In 1613 Michael Praetorius was appointed Michael's assistant and became *de facto* conductor of the choir and orchestra. His enormous printed output contains almost exclusively plainsong-based liturgical music and it undoubtedly formed the basis of the court church music during the early 17th century. Schütz, who finally became Hofkapellmeister in 1617, added a number of his own works to it, most of which were sacred though not in the tradition of the earlier plainsong-based liturgical works. Apart from his *historiae* it was above all his Becker Psalter (1628) that dominated Lutheran court services in the 17th century. After 1548 both Netherlands and Italian musicians supplemented the native stock and around 1630 they were joined by English players. The Thirty Years War (1618–48) reached Saxony by 1631 and adversely affected the electoral Kapelle. In 1632 there were still 39 members, but by 1639 there were only ten. Schütz spent much of the time during 1633–41 visiting other courts, occasionally returning to Dresden, where he remained nominally in the service of the elector. From 1641 he had tried to reorganize the Kapelle, and by 1647 it numbered 21. Italian influence continued to grow, reaching a peak under Elector Johann Georg II (1665–80), who, as electoral prince, had maintained his own musicians as early as 1640. In 1665 this 18-member Kapelle was merged with the 17-member electoral Kapelle. From 1650 to 1680 court music in Dresden remained wholly set on princely ostentation, its course influenced less by the ageing Schütz, who retired to Weissenfels in 1655, than by G. A. Bontempi (the first castrato in Dresden), Albrici, M. G. Peranda, Carlo Pallavicino and others. In 1666 C. C. Dedekind, a member of the Kapelle, succeeded in forming and leading a 'Kleine deutsche Music' ensemble, consisting solely of Germans, chiefly for church services.

A number of instrumentalists of the Kapelle during the 17th century were also important as composers: Carlo Farina (*c.*1625–9), Dedekind (Konzertmeister, 1666–75), J. J. Walther (1673–80), J. P. von Westhoff (1674–97), J. W. Furchheim (1655–82) and N. A. Strungk (1688–97). Outstanding among the organists were Hans Leo Hassler (1608–12), under whom the organ of the palace chapel, built in 1563, was rebuilt in

1612, Matthias Weckmann (1641, 1647–54), Schütz's gifted pupil, and Adam Krieger (1657–66), a prominent songwriter. Anton Colander (1590–1621), a pupil and distant cousin of Schütz, was also court organist; he went to Dresden in about 1616 and, together with J. H. Schein, was one of the earliest composers of small German sacred concertos. The last incumbents of the post of first Kapellmeister, between the death of Schütz (1672) and 1697, were M. G. Peranda (1672–5), important for his numerous sacred concertos, two *historiae* and two operas, Sebastiano Cherici (1675), Vincenzo Albrici (1675–80), Bernhard (1681–92) and, finally, Strungk (1692–7), whose role as Kapellmeister in Dresden was overshadowed by his activities as an operatic impresario and composer in Leipzig.

From 1548 the growth of music at the court was confined to banquets and church services, and more works of Lutheran church music were written under Johann Georg II than at any other time. However, from the 1570s onwards court festivities increasingly used all the available forces. Carnivals, princely baptisms, weddings, visits and numerous other occasions increasingly gave opportunities to organize as a single event what had once been separate festival events and individual scenes of ceremonial processions ('inventions'); by the 17th century each festival at the Dresden court was a cyclical, highly imaginative *Gesamtkunstwerk* accom-

panied by such events as sports, theatrical entertainments, hunting, fireworks and dancing. Within this court festival culture, ballet – increasingly, sung ballet – and finally grand opera played a prominent role.

The most important works written in Dresden for the musical theatre during the 17th century were Schütz's *Dafne* (Torgau, 1627) and *Orpheus und Euridice* (Dresden, 1638), an anonymous ballet *Paris und Helena* (1650), Bontempi's *Il Paride* (1662), *Teseo* (libretto by G. A. Moniglia, music possibly by Moniglia or Bontempi), the performance of which opened the first opera house and theatre in Dresden in 1667 (built on the Taschenberg and for which Johann Georg III engaged an ensemble of leading Italian singers in the mid-1680s), *Apollo und Daphne* (1671) and *Io* (1672), both by Bontempi and Peranda, Bernhard's ballet *Von der Wirkung der sieben Planeten* (1678) and Carlo Pallavicino's *La Gerusalemme liberata* (1687), a personal triumph for Margherita Salicola, Dresden's leading prima donna.

(ii) 1694 1815. Throughout the 18th century the activities of the court orchestra and its dependent institutions left their mark more than ever on Dresden's musical history and gave it perhaps its greatest lustre. Political events divide the period in two parts: the first begins in 1694 with the accession of Friedrich August I,

5. Festivities held in honour of the marriage of Crown Prince Friedrich August II to Maria Josepha, daughter of Joseph I of Austria in August 1719, which included a performance of the operetta 'Vier Jahreszeiten' at the theatre in the Grosser Garten (above), and the Festival of Diana on the Elbe (18 September), with Heinrich directing the orchestra of the Dresden Hofkapelle (below). pen and ink drawings with wash, by an unknown artist, in the Kupferstichkabinett, Dresden

who converted to Catholicism the better to secure his and his heirs claims to the Polish crown, and ends in 1763 with Saxony's defeat in the Seven Years War and the death of the electors Friedrich August II and Friedrich Christian; the second covers the five-year administration of Prince Xaver and most of the reign of Friedrich August III, the last elector and first King of Saxony. The title King of Saxony was created by Napoleon I in 1807 and ratified by the Vienna Congress of 1814–15, when it was restricted to the ruler of a country which had been reduced to less than half its original size. The political events of 1813–15 were even more disruptive than those of 1763 and inevitably produced a further interruption in the cultural life of the Saxon capital.

The Saxon Polish kings Friedrich August I (King August II, 'der Starke', 1697–1773) and Friedrich August II (King August III, 1733–63) exhibited all the magnificence normally associated with the court of an absolute monarch and the arts played the leading part in the display. Architecture, painting, sculpture, music and theatre were all encouraged. Friedrich August I's taste generally favoured French art, whereas those of his son were exclusively directed towards Italy: as a result, the court of August der Starke entertained not only Italian musicians but also French singers and actors, whereas his successor accepted French artists only for the opera and the ballet. The actors' repertory, like that of the Italian players, always included musical pieces such as intermezzos; but musical interest naturally centred on the Hofkapelle, which was occasionally strengthened or increased by the court trumpeters and drummers, and by fifers from the court and the hunt: between 1717 and 1733 it was further strengthened by the Königlich Pöhlische oder Kleine Cammer-Musique, which included many prospective Hofkapelle members, such as Quantz and Adam. The Churfürstlich Sächsische Capell- und Cammer-Musique comprised both the expanding orchestra itself and a body of Italian or Italian-educated singers. Among the most famous musicians of the period 1694–1763 are Volumier, F. M. Veracini, Pisendel, F. M. Cattaneo (violin), Johann Adam (viola); G. F. M. and A. F. Picinetti, A. A. de Rossi (cello); Carl Friedrich Abel (viola da gamba), G. Personelli, G. F. Kästner (double bass); Buffardin, Quantz, F. J. Götzl (flute), F. le Riche, J. C. Richter, Antonio Besozzi (oboe); A. J. Hampel (horn); S. L. Weiss (lute); and Hebenstreit (pantaleon). The Kapellmeister and court composers of the time include Zelenka, Ristori, Lotti, Heinichen, Hasse and Schürer. Minor roles were played by E. C. Hesse, Porpora and others, while Bach (who dedicated the Kyrie and Gloria of what was to become the B minor Mass to Elector Friedrich August II in 1733) was given the title of court composer from 1736 until 1750. Prominent singers included S. S. Lotti, Vittoria Tesi, Faustina Bordoni (Hasse's wife), Regina Mingotti, Teresa Albuzzi-Todeschini, Senesino, Giovanni Bindi, Domenico Annibali, A. M. Monticelli, V. Rochetti, F. Salimbene and the two Erminis, who sang together in intermezzos. The duties of the vocal and instrumental Kapelle included playing in Italian opera, Catholic church music and chamber music. The Lutheran court church music ensemble survived the introduction of Catholicism by August der Starke, but the number of its members was gradually reduced; some of them were well-known figures, such as Hebenstreit, who was in charge of the ensemble from 1735 until 1751.

But large-scale works could be performed only with the assistance of the Hofkapelle, which was exceptional.

The Italian opera, however, was the centre of attention, especially those performances conducted by Lotti (1717–19) or Hasse (1731, 1734–56). Its fame dates from the opening of the opera house on the Zwinger built by the architect Pöppelmann, decorated by Alessandro Mauro and later redesigned by Giuseppe Galli-Bibiena. Its capacity was between 1500 and 2000, one of the largest theatres in Europe (see fig.6). The standards it set created a stir throughout Europe and its decision to allow free admission was widely acclaimed. Handel visited Dresden in 1719 for the wedding of Crown Prince Friedrich August II and Maria Josepha, daughter of Joseph I of Austria; he engaged the leading singers for his London company and so seems to have been the cause of the 'opera scandal' of 1720, which led to the closure of the opera house. It reopened, however, in 1726 with a new ensemble of young singers. It was Hasse who soon after achieved the greatest glory, his abilities as a conductor being equal to his talents as a composer. His arrangement of the orchestra was reproduced by Rousseau in his *Dictionnaire de musique* (1767) and held out as a model.

From at least 1730 music in the church culminated in the annual performance of an Easter oratorio, but was rather less in the public eye, as Saxony, the home of the Reformation, only tolerated its princes' conversion and failed to grant the Catholic church any significant status. Moreover, the electors, doubtless in imitation of the papal chapel, strove to give their church music an air of mystery and exclusiveness, for example, the copying and circulation of Zelenka's sacred works was forbidden. In the development of instrumental music Pisendel, first violinist in the Kapelle from 1712 and Konzertmeister from 1728 to 1755, was one of the key figures of the period. While Dresden followed Venice and Rome in opera and looked to Vienna for church music (Electress Maria Josepha was Austrian by birth and Zelenka had links with the Vienna school of composers centered on Fux and Reutter), it was Pisendel who introduced Dresden to the influence of the instrumental music of central and northern Germany. Not only were the concertos and chamber music of Vivaldi, Albinoni and Tartini regularly performed (which would have been inconceivable without Pisendel), but also similar works by Telemann, Fasch, Graupner, Stölzel, Quantz and the Bendas and Grauns, musicians whom Pisendel had known in Leipzig or whose training he had supervised or supported. Many manuscripts of works by all these composers are in the music collection of the Sächsische Landesbibliothek in Dresden. Pisendel's influence on the standard of orchestral playing (particularly when he was working with Hasse), on the taste of his courtly public and on his pupils must have been formidable.

Saxony's defeat in the Seven Years War (1756–63) and the death soon afterwards of two of its electors brought an end not only to its association with the Polish monarchy but also, for a time, to the electorate's economic strength. The country suffered greatly during the war and Dresden was largely destroyed by the Prussian bombardment of 1760 (the former princes' palace was burnt down, and with it all the court musical archives, including many works by Schütz). The government's preoccupation with economic recovery and the rebuilding of the capital restricted interest in the arts at court for a time. Records (in *D-Dia*) give details of the

6. Interior of the opera house on the Zwinger during a performance of the opera 'Teofane' by Lotti in 1719 (probably with Lotti conducting the Hofkapelle) pen and ink drawing by an unknown artist in the Kupferstichkabinett, Dresden

strained circumstances of the musicians, who had not been paid a regular salary for years. Most of the Italian singers were discharged, as were Hasse and his wife, although Hasse retained his title 'Oberkapellmeister'. A troupe of French actors engaged in 1764 was disbanded in 1769. The Italian opera was reconstituted and given the status of a private enterprise, although the court maintained a financial interest in its affairs, the large opera house was closed down and a smaller theatre which was cheaper to run was leased to the court by Moretti and later bought. The Hofkapelle remained in attendance, together with a few singers for the Catholic services, the court trumpeters and the fifers of the court and hunt. Elector Friedrich August III, a distinguished connoisseur of music and a keyboard player capable of playing from a full score, was always anxious lest the traditions of music-making at court be allowed to lapse. Slowly it became possible to regenerate the orchestra, which had to fulfil a threefold function in opera, church and chamber music. Prominent artists who joined the orchestra during these years included the Konzertmeister Cristoforo Babbi, J. B. Tricklir (cello), J. C. Horn (double bass), J. F. Printz (flute), Carlo Besozzi (oboe) and A. J. Hampel (horn). Kapellmeister included Schürer, Domenico Fischietti, J. G. Naumann, Schuster, Seydelmann, Paer and Morlacchi, some of whom worked simultaneously. Naumann proved to be the outstanding figure of the period: under his direction (1776–1801) the Kapelle regained its former reputation and, particularly in church music, achieved high stan-

dards. Chamber music, too, under Schuster's direction again began to prosper. Unlike church music, which largely drew on works by local composers, instrumental music was firmly orientated towards Vienna (Haydn's symphonies, Mozart's keyboard concertos and chamber music, together with works by a number of lesser Viennese composers); but it was the harpsichord which, in accordance with the elector's personal taste, was given pride of place. In the theatre the emphasis shifted to *opera buffa* and large-scale intermezzos more popular in Dresden than anywhere else outside Italy, probably because of the low cost of production. At the end of the century, following the general trend, *opera semiseria* began to appear. The court theatre remained closed to Naumann's reform operas, composed for the courts in Stockholm and Copenhagen and Mozart was represented only by *Così fan tutte* (1791), *Die Zauberflöte* in Italian (1793) and a remarkable pasticcio, *Gli amanti folletti* (1794). *Don Giovanni* and *Le nozze di Figaro* did not enter the repertory until 1813 and 1815 respectively. Nevertheless, despite the Italian bias of the repertory, the Dresden opera, both from a visual and musical point of view, could compete with anything that the other theatres of the time could offer. It was, however, probably not until the time of Paer (1802–6) that the standard of singing and of stage design could match that of the orchestra. But the period of impresario opera also boasted notable singers, including Maddalena Sirnen, Maddalena Allegranti, Francesca Paer, Charlotte Haeser, Domenico Guardasoni, Francesco

Ceccarelli, Antonio Benelli and Giuseppe Tibaldi.

While Dresden's music was shaped by a variety of external influences, it was itself influential elsewhere. In the first half of the 18th century Pisendel's many friends exchanged his compositions for works of their own. In Potsdam and Berlin the influence of Dresden was compounded by Frederick the Great, who after staying in Dresden in 1728 modelled his Prussian residence on all that he had seen and heard there, and who went out of his way to engage Dresden musicians. Less permanent links resulted from the royal progresses of the Saxon princes, whose retinue often included orchestral players, and also from dynastic ties; one of Friedrich August II's daughters, for example, married into the French royal family and became dauphine, and probably brought about the successful appearance of Hasse and his wife in Paris in 1750. The Bavarian princess Maria Antonia Walpurgis married Friedrich Christian and introduced Dresden's music to Munich, and her daughter-in-law Amalia Augusta of Pfalz-Zweibrücken in turn probably transmitted the influence to Mannheim. Guest appearances took Dresden's artists to various places (the Erminis, for example, travelled to Venice in 1739), while commissions took the city's composers to Italy (Hasse, Naumann, Schuster), northern Germany, Denmark and Sweden (Naumann). The Dresden troupe of Italian players was hired out to the Russian imperial court in 1731 and thus brought the tsars their first taste of Italian opera. Friedrich August I and Friedrich August II introduced the musical traditions of the Dresden court to Poland; later, opera impresarios repeated their Dresden repertory in Prague and Leipzig. Dresden, then, was not only a town with its own highly developed musical traditions but a point at which all the thoroughfares which ran to and from various European centres of music converged.

4 THE DEVELOPMENT OF MIDDLE-CLASS MUSIC IN THE 18TH CENTURY. During the first two thirds of the 18th century, the only counterbalance to the dominance of court music in Dresden was the music of the city's three Lutheran mother churches. To judge simply by the inflated prices of admission, guest appearances by leading Italian opera companies, such as those of the Mingotti brothers in 1746 and 1747 and of G. B. Locatelli from 1754 to 1756, might appear to have been financially dependent on audiences of townspeople, but they too relied on the support of the court; indeed, the Mingotti company took part in the crown prince's marriage celebrations in 1747, mounting a performance of the festival opera *Le nozze d'Ercole e d'Ebe* which Gluck, their conductor, composed for the occasion. Equally dependent on the court's financial support were the ventures of Biaggio Campagnari, a court opera singer who, together with his German students, put on performances of operas and intermezzos between 1746 and 1748; and of Pietro Moretti, an Italian actor who, together with German actors and intermezzo players, appeared in 1755 and 1762-3 in his own theatre, which was later bought and rebuilt as the Kleines Churfürstliches Theater. An altogether different state of affairs prevailed in the case of the middle classes' slowly developing interest in concert-going. Even members of the Hofkapelle took part in the more important organizations, although the organizers counted neither on the court's financial support nor on its presence. The first landmark was a series of concerts organized in 1779-82 by J. G. A.

Basemann, head court cook, and conducted by Naumann; the second was the series of Grosse Concerte directed by Schuster (for a time these were performed in association with the Societäts-Theater (1776-1832), a society of amateur performers). Most of the concerts were organized on a subscription basis. Amateur societies, including the Societäts-Theater, mounted concerts, operas and Singspiels as well as plays. The history of this period of Dresden's musical life, however, has been little explored. Prominent theatre troupes of the period included those of G. H. Koch (1764-5), J. C. Wäser (1770-72), C. T. Döbbelin (1774-5), A. Seyler (1775-7), Pasquale Bondini (1778-93) and Franz Seconda (1793-1814), all of whom were more or less firmly contracted to the court. Of the theatres at the actors' disposal, the Theater auf dem Linckeschen Bade, east of the city walls on the right bank of the Elbe, soon became the centre of activity, and every summer from 1790 until 1817 the Gesellschaft deutscher Schauspieler of Joseph Seconda (Franz's brother) appeared there; the troupe also performed in Leipzig and other towns in Saxony, and in Dresden it was to become the most significant among those unconnected with the court. All the troupes followed contemporary practice in performing not only plays but also music-theatre and occasionally ballet. Any real rivalry with the achievements of the Italian opera was out of the question and the outspoken praise that contemporary critics lavished on the singing actors must be seen in context. The belated opening of a German court opera in Dresden is largely explained by the fact that the aristocracy confused the amateur singing of the German actors with German opera in general. The historical importance of the companies, however, consists not only in their bringing German adaptations of *opere buffe*, intermezzos and *opéras comiques* to a wider audience, but also in giving them an insight into the German Singspiel and the broad development of German opera. Many of the leading exponents of the new genre were closely associated with the troupes as conductors (Standfuss was with the Koch troupe, F. L. Benda and Neefe with Seyler, E. T. A. Hoffmann with Joseph Seconda, 1813-14); and others soon had their works accepted into the repertory (J. A. Hiller and Georg Benda). Joseph Seconda gave first performances in Dresden of the most important works of Mozart, Beethoven and the young Weber. Richard Engländer's research into Dresden's musical history indicates the encouragement that the Singspiel productions of Seyler's company gave to German opera in the eyes not only of the general public but also of local composers. Schuster and Seydelmann composed Singspiels and Naumann adapted a number of his own works into German.

Music was also privately encouraged in the homes of the middle classes and the aristocracy. Throughout the 18th century ministers, ambassadors and others maintained their own orchestras; that of Brühl (d 1763) is frequently mentioned and is known to have included Georg Gebel the younger and J. G. Harrer. The aristocracy also organized gala concerts, serenades and the like to celebrate family or political events, and these led to regular series of concerts such as Schönberg's Donnerstags-Concerte of about 1775. Of equal importance to both the aristocracy and the middle classes, however, was domestic music-making, possibly in imitation of the elector and his family. Local composers thus made valuable contributions to the corpus of chamber

7. The Royal Saxon Opera House designed by Gottfried Semper and opened in 1841 lithograph

music, and the accompanied songs of Naumann, Schuster, Seydelmann and Weinlig are noteworthy in that context. However, music outside the court was as a whole not only socially beneath that of the court itself but also inferior to it artistically, and it is unlikely that its influence extended beyond Dresden, although it was of greater importance than earlier research indicates

5. 1815–1914 Dresden became the seat of a royal court with the establishment of the Kingdom of Saxony at the Vienna Congress (1814–15). Under Count Heinrich Vitzthum, the first general administrator of the *Königliche Kapelle* and court theatre, a German Opera was founded in 1817. The struggle for supremacy between Italian opera, which the court favoured, and German opera, supported by the middle classes, continued in Dresden until 1832, when the Italian company was disbanded. Weber, who wrote many of his works in Dresden (including *Der Freischütz*, *Euryanthe* and most of *Oberon*), was formally sworn into his new post as conductor of the so-called 'Deutsches Departement' on 17 January 1817. Weber's repertory avoided all things Italian and initially tended in the direction of *opéra comique* and related genres before progressing to German works, including those of Mozart and Beethoven (*Fidelio*, 1823), and, finally, his own operas (*Der Freischütz*, 1822; *Euryanthe*, 1824). With his early death in London in 1826, there seemed to be little hope of any further artistic development and consolidation of German opera. The Italian court opera was conducted from 1810 until its dissolution in 1832 by Weber's opponent Francesco Morlacchi (who continued as director of opera until his death in 1841); Dresden was certainly indebted to his abilities as an orchestral trainer and to his enthusiasm for social innovation (he introduced Palm Sunday concerts in 1826 to support

the orchestra's widows and orphans). There is little evidence of the activity of Heinrich Marschner (music director, 1824–6), whereas Karl Gottlieb Reissiger (music director from 1826, Kapellmeister from 1828 and principal Hofkapellmeister, 1851–9) decisively influenced the course of Dresden's musical life for several decades. From 1843 to 1849 Reissiger was joined by Wagner, who conducted both the opera and the orchestra, and during Reissiger's term of office regular public subscription concerts were finally introduced in 1858. Earlier unsuccessful attempts to establish such concerts had been made by Weber (1821), Wagner (1848) and others. The Royal Saxon Opera House, built to designs by Gottfried Semper, was opened in 1841 (see fig. 7)

Wagner, 17 years after Weber's death, was the latter's true successor, and continued his plans and ideas. It is significant that the test piece that he chose to conduct on 10 January 1843 was Weber's *Euryanthe*. Wagner had attended the Kreuzschule in Dresden, but his creative period there began with the successful première of *Rienzi* in 1842, a high point in the town's musical history; this was followed by the première of *Der fliegende Holländer* in 1843. While there he also composed *Tannhäuser* (first performed on 19 October 1845), *Lohengrin* and the biblical scene *Das Liebesmahl der Apostel* (1843), and began work on the librettos of *Die Meistersinger* and the *Ring*. He also distinguished himself conducting performances of Gluck's works and, together with the orchestra (which he praised as a 'magic harp' and whose excellence stimulated his powers of orchestration), offered exemplary interpretations of Beethoven's symphonies, including the memorable 'rediscovery' of the Ninth Symphony at the Palm Sunday concert of 1846. The leading singers of this period included Wilhelmine Schröder-

Devrient, whom Weber had engaged, Joseph Tichatscheck and Anton Mitterwurzer. On Wagner's initiative Weber's mortal remains were brought from London to Dresden in 1844, an occasion marked by his delivering the funeral oration, for which he wrote *An Webers Grabe*. Wagner's part in the Dresden May Rising of 1849 resulted in a warrant being issued for his arrest and caused him to flee; he did not revisit the town until 1862, by which time his operas were firmly established in the Dresden repertory.

Regular quartet societies made up of members of the orchestra were formed as early as 1811, so that chamber music must have been publicly performed from that time. The quartet of the Konzertmeister Franz Schubert (1808–78) was first performed in 1836. In the 1840s there were the midday and evening concerts by Clara and Robert Schumann, a series continued after 1850 by the pianist Marie Wieck, Clara Schumann's half-sister. There were also notable recitals by Karol Lipiński's quartet; Polish by birth, Lipiński was the Konzertmeister of the orchestra from 1839 to 1859 and was responsible for the excellence of its string section throughout the 19th century. In 1854 members of the orchestra, led by the flautist and librarian Moritz Fürstenau, founded the Tonkünstlerverein, which promoted and performed the chamber music works of all periods, including the most recent. Notable artists from outside Dresden also appeared at the concerts. From 1856 members were admitted 'to listen', so that the society soon grew to be dependent on the support of the middle classes. As early as 1825 an 'Institute for those aspiring and hoping to be trained as a future generation of artists' had been founded in association with the Hofkapelle, an idea to which Morlacchi (1814) and Wagner (1848) also subscribed. But it was only in 1856 that, thanks to the initiative of the chamber musician Friedrich Trostler, the Dresden Conservatory was founded, it soon began to prosper, with such teachers of composition as Felix Draeseke (from 1884).

The Musikalische Akademien of the Hofkapelle were held in the rooms of the Hôtel de Pologne and the Hôtel de Saxe alongside Palm Sunday, Ash Wednesday (from 1850) and charity concerts, they brought before the public the most prominent virtuosos of the period as well as soloists from the orchestra, also providing the setting for Reissiger's Beethoven performances. The performers included Spohr, Hummel, Paganini (1829), Jenny Lind, Bülow and Vieuxtemps, among the conductors were Berlioz (who gave his *Symphonie fantastique* and *Harold en Italie* in 1843 and his *La damnation de Faust* in 1854), Mendelssohn (*St Paul*, 1843), Schumann (*Das Paradies und die Peri*, 1843) and Liszt (*Dante Symphony*, 1857).

The middle classes followed the example of Berlin in establishing a choral tradition. Soon after the Berlin Singakademie had been founded (1791) the court organist Anton Dreyssig inaugurated a similar academy in Dresden, the Dreyssigsche Singakademie (1807). Regular performances of oratorio date from Haydn's *The Creation* in 1814 and found their most fervent advocate in J. G. Schneider (1832-57), under whom Beethoven's *Missa solemnis* received its first performance in Germany in 1839. Among the male-voice choirs formed in Dresden after the model of Zelter's Berlin Liedertafel (1809) were the Liedertafel, of which Reissiger was the first conductor (1830), and the Orpheus (1834). In 1842 and 1843 the first major

German male-voice choral festivals were given there. Schumann lived in Dresden from 1844 to 1850, active both as a composer (*Genoveva*, Second Symphony, Piano Concerto etc) and as a teacher. In 1847 he took over the Liedertafel from Hiller and in 1848 founded a Verein für Chorgesang, which in 1873 became known as the Robert Schumannsche Singakademie. In 1849 he celebrated the centenary of Goethe's birth with the first performance of the closing scene and chorus from his *Scenen aus Goethes 'Faust'*. The *Vier Märsche* op.76 were Schumann's contribution to Dresden's civilian revolution of that year.

Karl August Krebs succeeded Wagner in 1850 and was joined in 1860 by Julius Rietz, who was in charge of the opera and orchestra, and from 1874 was also Dresden's first general musical director until his death in 1877. The first Semper opera house was burnt down in 1869 and was replaced by a temporary wooden theatre until the second Semper opera house was opened in 1878. Rietz's successors were Franz Wüllner and, from 1882, Ernst von Schuch, who had been with the

Königlich Sächsisches Hoftheater.

Sonntag, den 19. October 1845.

Zum ersten Male:

Zannhäuser

der Sängerkrieg auf Wartburg.
Große romantische Oper in 3 Akten, von Richard Wagner.

[illegible]

Die neuen Stoffe sind nach der Anordnung des Herrn Hofkassapleiers Helmer geordnet.

Textbücher sind an der Kasse des Gymnasiums mit 3 Markstücken zu haben.

Freitag, den 20. October: Richard & Wanderleben. Lustspiel in 4 Akten, von Kretz
Hierauf Tony, Divertissement

Das Sonntag-Abonnement ist bei der heutigen Vorstellung aufgehoben

Die Büllets find aut am Tage der Bericklung gültig, und auszugsweise Büllets werden auf
bis Montag 12 Uhr an traifenden Tage angenommen.

Der Verkauf der Billets gegen sofortige baare Bezahlung findet in der, in dem unteren Theile des Rundbaues befindlichen Expedition, auf der rechten Seite, nach der Erde zu, früh von 9 bis Mittags 12 Uhr, und Nachmittags von 3 bis 4 Uhr statt.

Alle zur heutigen Vorstellung bestellte und zugefaltete Blätter sind Vermittlung von früh
9 bis späters 11 Uhr abzuholen, außerdem darüber anders verfügt wird.

Freibillette sind bei der heutigen Vorstellung nicht gültig.
Einlaß um 5 Uhr. Anfang um 6 Uhr. Ende nach 9 Uhr.

8. Playbill for the first performance of Wagner's 'Tannhäuser' at the Royal Saxon Opera House on 19 October 1845

orchestra as both musical director and conductor as early as 1872; as director of the court opera he presided over one of the most brilliant periods in the history of Dresden opera until his death in 1914 (from 1889 he was also general musical director). He championed Wagner's later works, in which he had the support of such outstanding singers as Therese Malten, Heinrich Gudehus, Karl Scheidemantel and Karl Perron. The production of *Feuersnot* in 1901 was the first in a series of Strauss premièrès which laid the foundation for the reputation of the Dresden Staatsoper throughout the 20th century; *Salome* followed in 1905, *Elektra* in 1909 and *Der Rosenkavalier* in 1911. Singers such as Marie Wittich, Karel Burian, Margarethe Simcs, Minnie Nast, Eva von der Osten and Friedrich Plaschke formed Schuch's famous Strauss ensemble, and under him the orchestra achieved a worldwide reputation. As a concert conductor he gave particular encouragement to the works of the new German composers.

Music in the Catholic court church had previously paid homage to the Italian operatic style and had been characterized above all by its performances of masses with orchestral accompaniment in which the choristers and members of the orchestra were joined by soloists and members of the opera chorus; but under Franz Wüllner it was reorientated towards works by classical German composers, while greater prominence was also given to a *cappella* singing. The composer Edmund Kretschmer was appointed conductor of the church choir in 1880: he had been court organist from 1863 and had taught at the Königlich-Kapellknabeninstitut since 1872. He was then given the title of royal composer of church music. In 1901 K. M. Pembaur was appointed court organist in Dresden, where he conducted the Liedertafel (from 1903) and the Schumannsche Singakademie (1910-13). In 1913 he became conductor of instrumental and vocal music at the Hofkirche.

Throughout the 19th century associations such as the Dilettantenkonzert, Stadtschreiber Fehr'sches Konzert and the Freundschaftliches Konzert and societies such as Harmonie and Konversation were of considerable importance in the growth of concert-going among the middle classes. In 1845 Ferdinand Hiller, conductor of the Liedertafel, tried to set up a civic concert body in Dresden by combining various orchestras including the Stadtkapelle, the band of the municipal guard and independent players and a specially formed mixed choir, but, despite the appearance of such prominent soloists as Clara Schumann (who gave the first performance of her husband's Piano Concerto in 1845) and Joachim, the venture had to be abandoned after two winter seasons because of competition from the Königl. Kapelle. The lack of a suitable concert hall gave rise to a phenomenon typical of Dresden at that period: open-air concerts held in the Grosser Garten, the Linckesche Bad and on the Brühlsche Terrasse, performed by the Stadtkapelle and military bands.

With the inauguration of the Gewerbehaus until the hall was destroyed in World War II. The Königl. Kapelle also held its symphony concerts there until it transferred to Semper's new opera house in 1878. Henri Petri was appointed Konzertmeister of the Kapelle in 1889; he formed an excellent string quartet that toured extensively. The members of the disbanded Stadtkapelle formed the Gewerbehaus Orchestra, and from 1885 it gave the Philharmonic Concerts organized by the Berlin concert manager H. Wolff and conducted by J. L. Nicodé.

The Philharmonische Populäre Künstlerkonzerte (now the Ausserordentliche Konzerte) were founded in 1894 as a counterpart to the concerts of the Königl. Kapelle in the opera house. The orchestra soon began to make international tours, with guest appearances in the 1870s and 1880s in Russia, Poland and the Netherlands. Under their Danish conductor H. W. Olsen further tours were undertaken to Denmark, Sweden and Norway in 1907 and the USA in 1909. Well-known guest conductors and soloists helped the orchestra to achieve its present status: Brahms (1884), Richard Strauss (1888), Tchaikovsky (1889), Dvořák (1889), Bülow, d'Albert, Anton Rubinstein, Motil, Nikisch, Rakhmaninov (who lived in Dresden in 1906-9), Busoni, Sarasate, Casals and many others. In 1915, when Edwin Lindner was conductor, the orchestra became known as the Dresdner Philharmonisches Orchester. Lindner also changed the name of the Schumannsche Singakademie to the Dresden Singakademie, treating both that choir and the Dresden Männergesangsverein as the Philharmonischer Chor, under which guise it was revived in 1967. He also worked in close association with the Kreuzchor and the Dreyssische Singakademie. Indeed, the orchestra's activities in general were characterized by his attempts to reach a broader spectrum of the public: historical symphony concerts were introduced in the 1880s, popular symphony concerts were given from 1912 onwards; and under Paul Buttner, the composer and conductor of the Dresden Arbeitersängerbundes, concerts for young workers were introduced.

6 FROM 1914. In 1923 the orchestra, then under J. G. Mraczek, became known as the Dresdner Philharmonie. In 1924 it changed its constitution, becoming a co-operative instead of a private organization. Its earliest conductors were Eduard Mörike (1924-9), Paul Scheinflug (1929-32) and W. Ladwig (1932-4); in 1934 the Dutch Paul van Kempen took over, turning the orchestra into one of the most famous in the world. He performed both the Classical and Romantic repertoires but concentrated particularly on contemporary music, establishing festivals of modern music (1935-42) and founding the tradition of a 'Dresden Musiksommer', in which the Staatsoper (as the court opera has been called since World War I), the Kreuzchor and the conservatory also took part. In 1928 Erich Schneider, then Kantor at the Frauenkirche, had performed serenade concerts in the Zwingerhof, conducting the orchestra of the Dresdner Mozart-Verein. The practice was revived by the Philharmonie in 1935. Kempen was forced to leave in 1942 by the Nazi authorities. Otto Matzerath, Bernardino Molinari and, finally, Carl Schuricht, the new principal conductor, conducted the Philharmonie's concerts until the orchestra was disbanded following the declaration of total war in autumn 1944.

9 Interior of the Dresden Palace of Culture

During and after World War I the Staatsoper had such eminent conductors as Hermann Kutzschbach (1898–1906, 1909–36), Kurt Striegler (1909–45, 1952–3) and Fritz Reiner (1914–21). Fritz Busch became general musical director and director of the opera in 1922, remaining until driven from office by the Nazis in 1933. He further raised the orchestra's standards and in both the opera house and the concert hall gave particular encouragement to contemporary composers including Pfitzner, Hindemith (*Cardillac*, 1925), Busoni (*Doktor Faust*, 1925) and Weill (*Der Protagonist*, 1926). He continued the Strauss tradition with the premières of *Intermezzo* (1924) and *Die ägyptische Helena* (1928), the latter conducted by the composer, with the general administrator Alfred Reucker he built up an ensemble of fine young singers, including Elisabeth Rethberg, Marta Fuchs, Maria Cebotari, Erna Berger and Paul Schoffler. After a brief interregnum, which witnessed the première of Strauss's *Arabella* (1933) under Clemens Krauss, Karl Böhm took over control of both the opera and the orchestra (1934–42). Strauss's *Die schweigsame Frau*, which had its première in 1935, was taken off by the authorities after four performances, because the librettist Stefan Zweig was a Jew. Böhm also conducted the premières of *Der Günstling* by Wagner-Régeny (1935), Strauss's *Daphne* (1938) and Sutermeister's *Romeo und Julia* (1940). Böhm's successor in 1943–4 was Karl Elmendorff, who conducted the première of Joseph Haas's *Die Hochzeit des Jobs* (1944) with Matthieu Ahlersmeyer and Elfride Trötschel in the leading roles. Semper's opera house, like all the Dresden theatres, was destroyed by bombing in 1945.

The Tonkünstlerverein was presided over from 1914 to 1939 by Theo Bauer and then, until the 1944 ban, by Arthur Tröber, who was later the orchestra's manager for many years (1955–69) and who continued the society's traditions after the war with the Kammermusik der Staatskapelle Dresden in 1952. The leading cham-

ber ensembles and soloists continue to shape this important aspect of Dresden's musical life, together with the chamber recitals of the Philharmonic players, as they did during the early decades of the 20th century. Particular mention should be made of the Gustav Havemann Quartet (1921) and those of Max Strub (1936) and Jan Dahmen.

In order to train a new generation of players in the traditions of the Dresden Staatskapelle the Orchesterschule der Sächsischen Staatskapelle (before World War I the Königl. Kapelle) was founded in 1923, its artistic control was entrusted to Fritz Busch and later to Karl Böhm. An opera school and seminary for music training were later incorporated with the orchestral school and the two bodies were amalgamated in 1937 as the Konservatorium der Landeshauptstadt Dresden, also known as the Akademie für Musik und Theater. After the war (as early as June 1945) teaching began again in the Staatliche Akademie für Musik und Theater, its rector from 1946 to 1951 was the eminent Prague composer Fidelio F. Finke, who lived in Dresden until his death in 1968. The institute received university status in 1952, during the rectorship of the musicologist Karl Laux (1951–63), and in 1959 was named after Weber. A department of musicology under Gerd Schönfelder was established in 1974. In 1968 the composer and musicologist Siegfried Köhler was appointed rector of the Dresden Musikhochschule; the Sächsische Landeskirchenmusikschule is also in Dresden.

The Dresden Philharmonic began giving concerts again on 8 June 1945, within a month of the end of the war. From 1947 to 1964 its artistic manager was Heinz Bongartz, who secured the orchestra's financial future as a state institution in 1950 and who raised it to new heights of artistic excellence. He gave further emphasis to the cycles of concerts founded by Mörike in 1925 in order to educate audiences, and increased the amount of time spent on foreign tours, thereby adding to the

orchestra's international reputation. In 1961 the Philharmonic was appointed a founder-member of the Prague Dvořák Society and in 1966 its services on behalf of Mahler's works were rewarded with a gold medal from the International Gustav Mahler Society of Vienna. Bongartz's successors were H. Förster (1964-7) and Kurt Masur (1967-72); during Masur's tenure the orchestra, considerably enlarged, moved to a new permanent home in Dresden's imposing Palace of Culture (1969; fig.9), where symphony concerts by the Staatskapelle are also given. From 1972 to 1977 the orchestra's principal conductor was Günther Herbig; he was succeeded by Herbert Kegel.

The Staatsoper and Staatskapelle also survived the collapse of 1945 and continued for a time to perform in temporary halls until 1948, when the former Schauspielhaus was reopened as the Grosses Haus of the state theatre complex. From 1945 to 1950 both opera and orchestral concerts were conducted by Joseph Keilberth, supported by the producer Heinz Arnold and a fine ensemble which included Elfriede Trötschel, Christel Goltz, Joseph Herrmann and Gottlob Frick. Keilberth was succeeded by Rudolf Kempe (1950-53) and Franz Konwitschny (1953-5). At the same time Rudolf Neuhaus began his long association with the Staatskapelle, first as its conductor and from 1955 as general musical director and assistant principal conductor. Since the 1950s the orchestra has maintained its outstanding reputation through guest appearances abroad and through its many recordings. Lovro von Matačić was principal conductor from 1956 to 1958, followed by Otmar Suitner (1960-64), Kurt Sanderling (1964-7) and Martin Turnovsky (1967-8). The composer Siegfried Kurz was one of the conductors from 1960; he was appointed general musical director in 1971 and in 1975 became executive musical director of the state theatres. In 1975 the conductor Herbert Blomstedt assumed control of both the opera and the orchestra. In 1973 the musicologist Horst Seeger became Intendant of the Dresden Staatsoper and Harry Kupfer became director of opera; leading members of the ensemble are the Dresden-born singers Peter Schreier and Theo Adam. The Staatsoper strives to retain the great traditions of the Dresden opera as well as encouraging contemporary operas, with premières of Blacher's *Die Flut* (1947), Oboussier's *Amphitryon* (1951), Finke's *Der Zauberfisch* (1960), Kunad's *Maitre Pathelin* (1969) and Udo Zimmermann's *Levins Mühle* (1973) and *Schuhu* (1976). The Staatsoperette performs operettas and musicals. Since 1946 the Landesbühnen Sachsen have been based in nearby Radebeul; they form the largest touring theatre company in the DDR, and with their fine music section, the Landesoper, have become an increasingly important part of Dresden's musical life.

Besides the choir of the Kreuzkirche (see §1 above), there are a number of large amateur choirs including the Beethoven-Chor (which originated in Fritz Busch's Lehrgesangverein of the 1920s), the Philharmonische Chor (which grew out of the Städtische Chor), the Sinfoniechor and the Neue Chor. Herbert Collum, organist at the Kreuzkirche, has made notable contributions to Dresden's concert activities with organ, harpsichord and chamber recitals. Renowned Dresden composers include Otto Reinhold, J. P. Thilman, Manfred Weiss (b 1935), Rainer Kunad and Udo Zimmermann. The Dresden Musiktage was inaugurated in 1949 and

continued in the 1960s in the form of a summer festival. In 1968 the 43rd German Bach Festival was held in Dresden, followed in 1972 by the Heinrich-Schütz-Tage der DDR and in 1976 by the Weber-Tage der DDR. Through the Carl Maria von Weber Prize (from 1976 an international competition) the rising generation of young artists, from 1969 specifically composers and conductors, has been fostered. An annual international music festival was founded in 1978. Dresden has become the leading musical centre of the DDR.

Dresden, Sem (b Amsterdam, 20 April 1881; d The Hague, 30 July 1957) Dutch composer and teacher. He was a scion of a merchant family and was partly self-taught in music. A short Piano Sonata, which he submitted for a music competition in 1903, attracted attention, and Dresden went to study in Berlin at the Stern Conservatory, where he studied composition and conducting under Pfitzner. After two years of study, Pfitzner offered to allow him to take over part of his conducting activities, including opera at the Berlin Theater des Westens. However, Dresden decided to return to the Netherlands and he began his Dutch career as a choral conductor. In 1919 he was appointed to teach composition at the Amsterdam Conservatory, being director of this institution from 1924 to 1937, and from then until 1949 (with a break during the war years) he was director of the Royal Conservatory in The Hague. In addition, he fulfilled important administrative functions in numerous music organizations.

During his first period (until about 1935) Dresden wrote only chamber and vocal music, except for the orchestral Theme and Variations, and he remained under the influence of German and French contemporaries. The three suites for wind and piano (1911, 1913, 1920) and the Trio (1921) for oboes and english horn show his particular familiarity with wind instruments, while in the contrapuntal technique and in the working with small motifs a few characteristics of his later style can be recognized. One of the chief works from this period is the Sonata for Flute and Harp (1918), a composition which gives striking attention to the timbre of the instruments. Of similar importance is the String Quartet no. 1 (1924), whose melodic nuclei are taken from two medieval Dutch songs. Dresden also wrote three major choral works at this time: the *Peasants' Festival* (1923), *Chorus tragicus* (1927) and *Hymnus matutinus* (1935). The second is based on a text by the 17th-century writer Joost van den Vondel, concerning the fall of Jerusalem. Unusual choral techniques are used, while particularly suggestive sound effects are achieved by means of an instrumental accompaniment of brass and percussion.

From 1935 to 1950 Dresden's interest was directed to the solo concerto. Each was written after Dresden had made a detailed study of the capabilities of the solo instrument. An extremely transparent treatment of the orchestra is a feature of these scores; Dresden's technique of instrumentation always strove for extreme clarity, any form of excess being avoided. In the First Violin Concerto the soloist is contrasted with an ensemble of wind, double basses and percussion; the Second is scored for full orchestra, but the soloist is never overwhelmed, rather the orchestra provides the

violin's development with a lively background, sometimes a conglomeration of rhythmic ideas in which the enlarged percussion section plays a prominent role.

During the war years, when Dresden was removed from his offices by the German occupiers, he worked on his most monumental composition, the *Chorus symphonius*, based on four psalm texts appropriate to the time in which the work was written. Dresden became more active as a composer after his retirement in 1949. In 1951 he wrote his most successful orchestral work, *Dansflitsen*, a suite in which the same motifs are developed in seven short dance forms. The last of the series of choral works based on religious texts were *Psalm 84* and the oratorios *St Antoine* (which made a deep impression during the international congress for church music in Augsburg in 1955) and *St George and the Dragon*. Dresden's last composition was the one-act opera, *François Villon*, for which he wrote the text. The piano score was completed a few weeks before his death, and from it his pupil Jan Mul prepared the orchestral score; the work had its first performance during the 1958 Holland Festival.

WORKS (selective list)

STAGE AND ORCHESTRAL

Toto, operetta, 1945, François Villon (opera, 1, Dresden), 1957, inc Theme and Variations, 1913, Vn Conc no 1, 1936, Symphonietta, cl, orch, 1938, Ob Conc, 1939, Vn Conc no 2, 1942, Pf Conc, 1946, Fl Conc, 1949, 3 Pieces for School Orch, 1949, Dansflitsen, 1951, Org Conc, 1952

CHORAL AND VOCAL

Meilied, chorus, 1909, Oud Nederlandse liederen Wilt heden zu treden, 't Haesken, chorus, 1916, Wachterlied, chorus, 1918, Peasants' Festival, chorus, 1923, Chorus tragicus (J van den Vondel), chorus, brass, perc, 1927, Memoria judaeorum, male chorus, 1932, Hymnus matutinus, chorus, 1935, 4 Vocalises, Mez, chamber orch, 1935, O Kerstnacht [O Christmas night], chorus, str, 1939; Assumpta est Maria, chorus, 1943, Gelukkig is het land, chorus, wind, 1948, 't Ros Beyaard, male chorus, 1949
3 Schuintamboers, male chorus, 1949, Te duinkerck, male chorus, 1949, Daar was een wuf, chorus, 1950, Psalm 99, chorus, org, trbns, 1950, Beatus vir, male chorus, 1951, Boerenfeest [Country Festival], chorus, 1953, Psalm 84, solo vv, chorus, orch, 1953, St Antoine, solo vv, chorus, orch, 1953, Carnavals Cantate, S, male chorus, orch, 1954, De wijnen van Bourgondie, chorus, orch, 1954, Chorus symphonius, S, T, chorus, orch, 1955, St Joris, S, Bar, chorus, orch, 1955, Rembrandt's Saul en David, S, orch, 1956, Catena musicale, S, ww qt, str qt, orch, 1956

JOS WOUTERS

Drese, Adam (b Thuringia, c1620; d Arnstadt, 1701).

German composer, gamba player and teacher. He was the outstanding member of a dynasty of Thuringian musicians. He is first heard of in Merseburg as *collaborator* and cathedral musician, and in 1648 he described himself as 'director of music'. In about 1650 he went via Jena to become director of music to Duke Wilhelm IV of Saxe-Weimar at Weimar. The development of musical life at the court benefited from his visits to Warsaw before 1649 to study with Marco Scacchi, to Dresden in 1652 and 1656 to study with Schütz and in 1653 to Regensburg, a leading centre of instrumental music. An outcome of these visits can be seen in a catalogue of his music that he compiled in 1662; it shows that he played an important part in transmitting Italian musical traditions in particular from region to region. On Duke Wilhelm's death in the same year, however, the court musicians were dismissed. Applying unsuccessfully for a post to the Landgrave of Hesse-Darmstadt, Drese referred to himself as being 'without a position for some time'. Soon, however, almost certainly by 1663, he went, possibly via Darmstadt, to Jena, where he served the court of Duke Bernhard as Kapellmeister and private secretary and the town as mayor. To strengthen the musical establishment at the court he took with him some of the musicians who had lost their jobs in Weimar. That he again had connections with Weimar is shown by his work there as well as at Jena as a director of operatic and other theatre music. He also had connections with Jena University: for example, he wrote a work to celebrate the duke's installation as rector of the university, and in 1677 a 'sacred comedy' by him on Christ's resurrection caused a scandal at a student performance, both works are now lost. He was also active as a teacher, Christian Demelius was one of his numerous pupils.

After Duke Bernhard died in 1678, Drese had to accept another change in his circumstances and cease working in Jena. He moved to Arnstadt to become Kapellmeister to the Count of Schwarzburg and remained there until his death. There he came into close contact with musicians of the Bach family and others who, like himself, were outstanding gamba players. This move caused a decisive change in his life. Whereas he had previously been concerned chiefly with secular music-making, including uninhibited theatre music, he now became a devout advocate of the Pietism of PHILIPP JAKOB SPENER. The conventicles of Pietist sympathizers that met in his house aroused the disfavour of their intolerant opponents, and so Drese (who described himself in 1697 as 'a loyal old Saxon servant approaching the grave') found that his last years were tinged with bitterness.

Most of Drese's music is lost, including many works of various kinds listed in his own above-mentioned catalogue of 1662 (at *D-WRI*) and in the Erlebach catalogue (at *D-RU*). His surviving music still awaits proper investigation, as too does his influence on his contemporaries; in this respect it is unfortunate that among his lost works is a treatise on music. The Pietism of his last years is foreshadowed to some extent in the melodies that he contributed to collections of sacred verse in the 1650s, for example to Georg Neumark's *Fortgepflanzter musicalisch-poetischer Lustwald* (1657). His chorale *Seelenbräutigam*, which was printed in a Darmstadt songbook of 1698, is very well known as *Jesu, geh' voran*: this text was later written to it by Zinzendorf.

G KRAFT

Dressel [Dressler, Drechsler]. German family of organ builders. Tobias Dressel (b Falkenstein, Vogtland, baptized 25 April 1635; d Buchholz, Erzgebirge, 29 May 1717) left home at an early age after the death (1646) of his father, a baker and freeman of Falkenstein, and became a journeyman. In Kulmbach, Bavaria, he was assistant to the distinguished master organ builder Matthias Tretzschler, with whom he built the organ in the Petrikirche (1657). He also worked in Forchheim, Lanzendorf (near Bayreuth), Schweinfurt and at Strasbourg Cathedral. On 2 August 1680 he was married (for the second time) in Buchholz, where he took up permanent residence. He built about 15 organs, in addition he was a respected judge and councillor.

Christoph Dressel (b Falkenstein; d Falkenstein, 6 Aug 1686), Tobias's nephew, may have been apprenticed to him. On 14 May 1679 he married the daughter of the mayor of Leipzig. For the Leipzig Thomaskirche he built a harpsichord and rebuilt the organ. He also built an organ in the Johanneskirche, Zittau (1685).

Johann Tobias (b Buchholz, 18 March 1687; d Buchholz, 24 Nov 1758) and Johann Christian Dressel (b Buchholz, 18 March 1687), twin sons of Tobias, were apparently apprenticed to Gottfried Silbermann. In 1727 they tuned the Holbeck organ in the Michaeliskirche at Hof, Bavaria, to equal temperament. They built organs in Schmiedeberg (1715; its attractive façade survives) and Grossolbersdorf (Erzgebirge), as well as in the Schlosskapelle, Weesenstein.

WALTER HÜTTEL

Dressel, Erwin (b Berlin, 10 June 1909; d Berlin, Dec 1972). German composer and pianist. He attended the Scharwenka-Klindworth Conservatory, where from 1919 he was a pupil of Klatte. In 1923 his incidental music to *Much Ado about Nothing* was used at the Berlin Staatstheater. He continued his studies with Juon at the Berlin Hochschule für Musik (1925) and at the Schule am Goetheanum, Dornach, Switzerland (1925-6). Returning to Germany, he began a long-lasting collaboration for the stage with the poet Arthur Zweiniger. Their first success was the satirical opera *Der arme Columbus*, composed after a period when Dressel had

served as theatre conductor in Hanover (1927-8). Subsequently, apart from an interruption during the war, he worked as a freelance composer, pianist and arranger of music for the radio. He was also music director for the Hamburg Junge Bühne (1946-8) and vocal coach at the Deutsche Staatsoper, Berlin (1948-9).

JOSEPH CLARK

Dresser [Dreiser], **Paul** (b Terre Haute, Ind., 22 April 1857; d New York, 30 Jan 1906). American songwriter, lyricist, publisher and performer. He was the brother of the novelist Theodore Dreiser. He learnt the guitar and the piano, at 16 joined a travelling show (adopting the pseudonym Dresser), from 1885 performed with the Billy Rose Minstrels, wrote sentimental songs and wrote and acted in five plays. After his first successful songs, *The Letter that Never Came* (1886) and *The Outcast Unknown* (1887), he became one of the first American performers to enter the music-publishing trade, as a staff composer for Willis Woodward Co. He continued to write songs (e.g. *The Pardon that Came too Late*, 1891) and in the early 1890s helped found the George T. Worth Co (eventually Howley, Haviland and Dresser, 1901). The company thrived, mostly on Dresser's tragic and sentimental ballads (e.g. *On the Banks of the Wubash*, 1897), some were prompted by his disintegrating marriage with the burlesque queen May Howard. From 1902 his songs were less popular and his publishing company failed in 1905 despite his last and best-known song *My Gal Sal*.

Dresser was the leading American writer of sentimental ballads in the late 19th century. Though much of his work was maudlin or cloying, the best songs have a sensitive poetic feeling; according to Theodore Dreiser, they are 'tender and illusioned', with a 'wistful seeking' nature. Through them the popular sheet-music industry established a counterpart, readily accepted by the white, Christian middle and lower classes, to the more frolicsome styles of the 'Gay Nineties'. The songs have much the same melodic simplicity, nostalgic texts and naive, direct appeal as Stephen Foster's songs of the earlier 19th century, though the harmonic language is slightly more complex, particularly in some of the chromatic passages at phrase endings (*My Gal Sal* has remained a favourite of barbershop quartets). A film biography of Dresser, *My Gal Sal* (1942), was written by Dreiser, with music composed or arranged by Ralph Rainger.

DEANE L. ROOT

Dressler. See DRESSER family.

Dressler, Ernst Christoph (b Greussen, nr. Sondershausen, 1734; d Kassel, 6 April 1779). German writer on music, tenor and composer. He first studied theology in Halle and Jena (1751–3) and then law, poetry (under Gellert), the violin and singing in Leipzig. After the Margravine Sophie Wilhelmine of Bayreuth admired his singing he was able to complete his musical education under the singer Signora Turcotti and became the margrave's chamber secretary and a member of the Hofkapelle. In 1763 he went to Gotha as secretary and chamber musician to the Duke of Saxe-Gotha and later became director of the Prince of Fürstenberg's Hofkapelle in Wetzlar (1767). He lived in Vienna from 1771 to 1775, where he sang for the emperor, and he became an opera singer at the court in Kassel in 1775.

Although he was a respected singer, Dressler is best remembered for his writings on music, in which he outlined possible ways of improving German opera. His earlier publications, *Fragmente einiger Gedanken des musikalischen Zuschauers* (1767) and *Gedanken, die Vorstellung der Alceste... betreffend* (1774), led up to a comprehensive description of German opera, the *Theater-Schule für die Deutschen, das ernsthafte Singe-Schauspiel betreffend* (1777, including a reprint of his *Gedanken*). This work reflects the spirit of *Empfindsamkeit* ('He who wants to move people with art must himself be moved'), and includes many practical suggestions, such as founding permanent opera troupes and music schools, he warned against the stiffness and exaggeration embodied in da capo arias and word-painting, and called for naturalness and correct declamation to intensify the plot without making the music obtrusive. Although he favoured strong accentuation of the text and relegation of music to a descriptive role (traits associated with melodrama), he advocated keeping songs in opera as a means of imparting fresh life to the expression of emotion on the stage. His only known compositions are vocal works (often settings of his own poetry), including a few lied collections (*Melodische Lieder für das schöne Geschlecht*, 1771; *Freundschaft und Liebe in melodischen Liedern*, 1774–7) and several separately published songs.

GERHARD ALLROGGEN

Dressler, Gallus (b Nebra, Thuringia, 16 Oct 1533; d Zerbst, Anhalt, between 1580 and 1589). German composer and theorist. He is first heard of in 1557 when he enrolled at the academy (later the university) at Jena. He must have attended school at Nebra, after which he probably spent some years in the Netherlands studying music, perhaps with Clemens non Papa, to whose compositions he frequently referred in his theoretical works. In 1558, after only one year's study at Jena where he got to know Leonhart Schröter and P. M. Schede, he became Kantor at the grammar school at Magdeburg. This school had an outstanding reputation for music as a result of the work of Martin Agricola, whose music for the reformed church was widely known. Dressler was Agricola's immediate successor, the post having been kept vacant during the two years following his

death. Practically the whole of his extant work dates from his years there. In 1570 he took the master's degree at Wittenberg and in 1575 became a deacon at Zerbst. Wittenberg University was at the time dominated by the Philippists (i.e. followers of Philipp Melancthon), who were engaged in heated debate with the orthodox Lutherans. Dressler wrote a number of occasional compositions while he was at Magdeburg which show that he was in close touch with the Philippists, and it is significant that when Wittenberg went over to the orthodox Lutheran cause about 1574–5, through the intervention of the Elector of Saxony, he should have accepted a position in Anhalt, which espoused the cause of the Philippists. Little is known of him after this, except that he acted as an adviser in various musical capacities and was well regarded at Zerbst.

Most of Dressler's works are polyphonic settings of Latin sacred texts in a Netherlands idiom, freely composed without the use of cantus firmi. He is chiefly remembered, however, for his contribution to the early development of the German-language motet. He chose texts from the Old Testament, including complete psalms and extracts from psalms, and also from the Gospels, his settings of which proved to be the forerunners of later collections of settings of central passages from the Sunday gospels covering the church's year, by Melchior Franck, Melchior Vulpinus and others. The style of his German motets is characterized by expressive treatment of the words, interesting contrasts of polyphony and homophony and, as with Lassus in his German settings, the repetition of words for emphatic purposes. Unlike most of his Protestant contemporaries, Dressler paid little attention to the Lutheran hymns. As a theorist he was particularly interested in the relationship of music to words and thus in the disciplines of the Trivium rather than in the numerically based Quadrivium. In this connection he adopted the term 'musica poetica', first used by Listenius in his *Musica* (1537) and defined by Heinrich Faber in his *Compendiolum musicae* (1545) as 'ars fingendi musicum carmen', and treated it as a separate discipline within composition to be taught alongside those of *musica theoria* and *musica practica*. For discussion of his contribution to modal theory see MODE, §III, 2.

BARBARA CHIMARA-ZACZKIEWICZ

Dretzel [Dretzl, Tretzel, Drechsel, Trechsel]. German family of musicians. Appearing under various names (corresponding to the changing orthography of the times), they played an active part in the musical life of Nuremberg for four generations, from the very end of the 16th century to the second half of the 18th. They were organists and instrumentalists, and three of them – discussed separately below – were also composers. The family's progenitor, Valentin (i) (d 1599), lived in Nuremberg as a respected merchant. His sons, all born and dying there, were Michael, (1) Valentin (ii) and Wolfgang (i). Of the younger Valentin's five sons, also all born and dying at Nuremberg, three became known as musicians: the eldest, Hieronymus, the fourth, Georg (i), and the youngest, Johannes. Wolfgang (i) was himself the progenitor of a line of musicians extending over at least three generations. His sons (2) Georg (ii), Georg Wolf and Paul were among them, and the lutenist Wolfgang Dretzel (ii) may have been another. Georg (ii)'s son Georg Heinrich, also a musician, was the father of (3) Cornelius Heinrich, who was the most important musician of the entire dynasty.

(1) **Valentin Dretzel (ii)** (b Nuremberg, baptized 30 May 1578; d Nuremberg, buried 23 March 1658). Composer, organist and instrumentalist. As early as 1599 he was a musician at the Frauenkirche, where he met many respected Nuremberg musicians, music lovers and patrons. He performed there as an instrumentalist and in 1604 also received a fee as an organist. Late in 1616 he was recruited to stand in as organist of the Spitalkirche for Caspar Hassler, who moved to St Sebald after his brother-in-law Hans Christoph Haiden had been summarily dismissed. When Johann Staden took over the position at St Sebald after Hassler's death in 1618, Dretzel succeeded him as organist of St Lorenz. After Staden died in 1634, Dretzel succeeded him at St Sebald; this was the highest position an organist could attain in Nuremberg, and Dretzel held it until

his death. That he was able to acquire two houses during the ensuing years shows that he was financially well off. At various times the town council sought his expert advice at organ trials. It was in this way that in 1607 he came into conflict with Caspar Hassler, who also saw him as a rival because of his skill as an organist. Hans Leo Hassler tried in vain to smooth over disputes between the two organists over fees for playing at weddings. In what he said and did Caspar Hassler was easily led by his emotions, and it is evident that he was jealously concerned to maintain his professional reputation and his material advantage. At first Dretzel also had difficulties with Johann Staden; a stern admonition to him from the town council, however, was enough to iron them out. Later the two men became very friendly and even published some music together. These good relations also extended to Staden's son Sigmund Theophil, who in 1637 dedicated his new edition of H. L. Hassler's *Kirchengesäng* to Dretzel, among other Nuremberg organists, and five years later Dretzel sent his youngest son Johannes to S. T. Staden for instruction.

Dretzel must have been a virtuoso organist. His playing on Hans Haiden's celebrated *Geigenwerk* during the course of the Nuremberg peace banquet on 25 September 1649 was greatly admired: in the elaborate festival music directed by S. T. Staden he led the second of the four instrumental groups placed at the corners of the festival hall. He seems to have struck up a particularly close friendship with the Nuremberg town councillor Georg Volckamer and dedicated to him several of his compositions, among them his principal publication, *Sertulum musicale* (1620), which even includes Volckamer's portrait. In contrast to Renaissance collections it is not the motets for many voices but those for only three that are placed at the end, as a contribution to the new style of music. The volume includes two four-part ricercares and two canzonas, one in four parts and one in eight, which provide evidence of Dretzel's instrumental style. There are suggestions of the sacred concerto in an introductory symphonia and in occasional directions concerning the distribution of instruments. Between 1625 and 1630 Dretzel dedicated a musical greeting to Volckamer at the turn of each year. For the first two years the greeting took the form of simple, homophonic German songs in two and four parts. From 1627 on he added a Latin aria with continuo, thereby demonstrating his knowledge of the new monodic style. In 1630, with the Thirty Years War showing no signs of ending, the greeting consisted of a plea for peace in the form of a dialogue in 27 verses and a three-part fugue on the chorale *Erhalt uns, Herr, bei deinem Wort*.

WORKS

(all published in Nuremberg)

- 4 teutsche geistliche Gesänglein, 4, 5vv (1618)

Dreyer, Johann Melchior (b Röttingen, 24 June 1747; d Ellwangen, 22 March 1824). German composer, organist and Kapellmeister. He was a teacher and, from 1779, organist at the imperial collegiate church at Ellwangen. From 1790 until the church was secularized in 1803 he was the first lay Kapellmeister there, and he continued in the service of the city until his death. His music was widely circulated in the early 19th century; most of his works, both instrumental and vocal, are symphonic in style and form, and though deftly organized, are mostly superficial. Dreyer was succeeded as organist at Ellwangen by his son Heinrich Dreyer. Another son, Johann Baptiste Dreyer, was Chorvikar at the Ellwangen church and later the city chaplain. An oboe sonata (*F-Pn*) that has been attributed to J. M. Dreyer is by Domenico Maria Dreyer.

WORKS

(all printed works published at Augsburg, unless otherwise stated)
Vocal (4vv, insts, unless otherwise stated) 18 missae breves, opp 2, 11, 17 (1790–1802), 6 as op 6 (1792), 12 Requiem, opp 7, 20 (1792–1804); 14 Landmessen, 1v, org, ad lib 3vv, 1/2 vn, opp.8, 19 (1793–1803); 30 Tantum ergo, incl opp 9, 18 (1782–1802); 3 Salve regina, 1v, str qt (Speyer, 1784); 6 Miserere, op 3 (1791), 28 vesper psalms, op 4 (1791), 24 vesper hymns, op 5 (1791), 6 litanies, op 10 (1796), 5 Vespers, op 12 (1797), 12 offertories, op 14 (1800), Te Deum, op 16 (1800), Deutsche Messe, vv, insts (1803), Stabat mater, 4vv, 1793, Stiftskirche, Ellwangen

AUGUST SCHARNAGL

Dreyfus, George (b Wuppertal, 22 July 1928). Australian composer of German origin. He settled in Melbourne with his refugee parents in 1939. Although he received no formal training as a composer, he grew up in a musical environment as his father was a fine amateur pianist. Dreyfus learnt to play the bassoon while at school and, after studying at the Melbourne University Conservatorium, he became a professional bassoonist in the theatre and later in the Melbourne SO (1953–64). His creative work was first recognized by the award of a West German scholarship for further study in Europe in 1955. In 1965 he took up composition as a full-time occupation and embarked on a series of major works while supplementing his income by writing music for films, television and commercial advertising. He was awarded a UNESCO Fellowship for travel in Europe (1966) and in 1967–8 he was the first composer to hold the Creative Arts Fellowship at the Australian National University, Canberra. Dreyfus visited the USA at the invitation of the US State Department in 1969, and in 1972 he won the Henry Lawson Festival Australian Arts Award. Works have been commissioned by the Australian Musica Viva (the children's opera *The Takeover* and the Sextet for didjeridu and winds), the Australasian Performing Rights Association (the Quintet of 1968) and the Australian Commonwealth government (the theme music for the Australian pavilion at Expo '70 and *Mo*).

Dreyfus's early film scores and advertising jingles developed his fluency in handling small ensembles. His chamber songs and instrumental pieces of the 1950s (such as the *Galgenlieder*, first performed at the 1960 Adelaide Festival of the Arts) display a gift for musical parody and grotesquerie, and a preference for wind instruments. After an intensive study of the techniques

of serial composition, his style was consolidated in the works of 1960–65, in which he sought a wider range of instrumental usage and a more profound lyrical expression. Typical of this period are *Musik in the Air* and, particularly, *From Within Looking Out* (1962), whose musical structure derives from the shape and mood of the text of an Annamese street song, and in which vocal resources such as Sprechgesang, ornamental melisma and a declamatory style are delicately integrated with the enclosing instrumental sounds. After 1965 Dreyfus concentrated on theatre and orchestral music in larger forms. The Symphony no.1 demonstrates not only his technical ingenuity, but also his desire to make an advanced musical vocabulary readily comprehensible.

In addition to his compositional work, Dreyfus has been very active in the promotion of new Australian music. In 1958 he formed the New Music Ensemble for this purpose and also to play contemporary foreign works; this organization led to the establishment in 1966 of the Melbourne branch of the ISCM, of which Dreyfus was made musical director. The George Dreyfus Chamber Orchestra was founded in 1970 as the only ensemble devoted exclusively to the performance of 19th- and 20th-century Australian music. Important premières of his own works include *Reflections in a Glass-house: an Image of Capt. James Cook* which was given as part of the Cook Bicentenary Celebrations (1970), and the opera *Garni Sands* which was successfully staged by the University of New South Wales Opera in 1972.

WORKS

(selective list)

VOCAL

Opera: *Garni Sands*, 2. (F. Kellaway), 1965, Song of the Maypole children's opera, 1, 1968, *The Takeover*, children's opera, 1, 1969, *The Gilt-Edged Kid*, 1 (L. Strahan), 1970
Galgenlieder (Morgensstern), Bar, fl, cl, bn, vn, 1957, *Songs Comic and Curious*, Bar, wind qnt, 1959, *Wilhelm Busch Lieder*, S, fl, cl, bn, 1959, *Musik in the Air* (R. McCuaig), Bar, fl, va, perc, 1961, *From Within Looking Out*, S, fl, va, vib, cel, 1962, *Ned Kelly Ballads* (J. Burstall), 4 hn, rhythm acc., 1963, *Homage to Stravinsky*, chorus 10vv, 1968, *Under the Gumtrees at Sunrise*, 4 solo vv, 2 choruses 5vv, 1968, *Reflections in a Glass-house: an Image of Capt. James Cook*, speaker, children's chorus, orch, 1970; *Mo*, Bar, str, bc, 1972

INSTRUMENTAL

Orch: *The Illusionist*, film ballet and suite, 1964, *Sym. no.1*, 1967, *Jingles*, 5 pieces, 1967; and more *Jingles*, 5 pieces, 1972

ELIZABETH WOOD

Dreyfus, Huguette (b Mulhouse, 30 Nov 1928). French harpsichordist. After attending the Paris Conservatoire and studying the harpsichord with Ruggero Gerlin in Siena, she began her concert career with a recital in Paris in 1960. Since then she has been active as a soloist and chamber musician specializing in the 18th century, but also playing some 20th-century music. Her many recordings include the complete harpsichord works of Rameau, much Couperin, Bach and Scarlatti, and piano trios by Haydn played on an early 19th-century piano. Dreyfus is harpsichord professor at the Paris Schola Cantorum and also lectures at the Institute of Musicology at the Sorbonne. Her playing is characterized by rhythmic vitality, technical brilliance and elegance of phrasing.

HOWARD SCHOTI

Dreyschock, Alexander (b Zak, 15 Oct 1818, d Venice, 1 April 1869). Bohemian pianist and composer. He appeared in public at the age of eight and went to Prague in 1833 to study the piano and composition with Tomášek. Five years later he began a series of long European tours as a virtuoso. Germany (1838), Russia (1840–42), Paris (spring 1843) and London; Holland, Austria and Hungary (1846); Denmark and Sweden (1849). In 1862 he was appointed to a piano professorship at the St Petersburg Conservatory; he was also made director of the Imperial School for theatrical music, and appointed court pianist. Unable to endure the Russian climate, he was sent to Italy in 1868, where he died. He was buried in Prague, at his family's wishes.

Although his repertory included many classical works, Dreyschock mainly performed his own pieces, which had no lasting success. But as a virtuoso, he possessed astonishing technical ability. J. B. Cramer, who late in his life heard him in Paris, exclaimed 'The man has no left hand! here are two right hands!' In spite of this skill, or perhaps because of it, Dreyschock had a reputation for loud playing, as Hallé reported from London in 1843. In classical music Dreyschock performed with faultless precision, but could be cold and prosaic.

His brother Felix Dreyschock (1824–69) was a violinist who accompanied Alexander on several tours. In 1850 he was made second Konzertmeister of the Leipzig Gewandhaus Orchestra and became a professor of violin at the Leipzig Conservatory.

EDWARD DANNREUTHER/DAVID CHARLTON

Driessler, Johannes (b Friedrichsthal, Saarland, 26 Jan 1921). German composer and teacher. While at school he studied the organ, choral conducting and theory with Karl Rahner. In 1940 he went to the Cologne Musikhochschule, where he studied composition with William Maler: during his army service in the war he was able to pursue sporadic musical activities. In 1946 Maler, director of the North West German Music Academy in Detmold, invited him to take a class in church music. He also taught theory and composition at the academy, of which he became director in 1960. Driessler's reputation rests above all on his church music.

However, his success has been limited to a small circle within West Germany. His music shows him to be a traditional composer preferring a tonal contrapuntal style; his great talent is for choral composition, which he has developed in oratorio and even opera, but without having won a lasting place in the German repertory.

WORKS

(selective list)

- Operas *Claudia amata*, 1952, *Prinzessin Hochmut* (Märchenoper), 1952, *Der Urmfried* (youth opera), 1957, *Doktor Luzifer Trux*, 1958.

HANSPETER KRELLMANN

Driffelde (fl. ? c1430–60). Composer, presumably English. His style suggests a younger contemporary of Dunstable. He may have been the Robert Dryffeld who was Submagister to the choristers at Salisbury Cathedral in 1428 and donated a small sum to help repair their dormitory in 1464. The town of Driffeld is in Yorkshire, where a large and important family named Driffeld also flourished. The composer is known from only one work, a three-voice *Agnus Dei* in *I-TRmn* 92, whose tenor is based on *Eructavit cor meum* (verse of the respond *Regnum mundi*). But *TRmn* 90 and *TRmd* 93 contain an anonymous Sanctus *Regnum mundi* on the same tenor whose music, save for 15 bars, is identical with that of the first and third invocations of the *Agnus Dei*.

BRIAN TROWELL

Drigo, Riccardo (b Padua, 30 June 1846; d Padua, 1 Oct 1930). Italian conductor and composer. He studied with Jorich and Bresciani in Padua, and with Buzzolla at the Venice Conservatory. He taught the piano and established a modest reputation as a composer and conductor in his native town, where his opera *Don Pedro di Portogallo* was performed in 1868. In 1878 he went to Russia, where he remained for more than 40 years. He was appointed conductor of the Italian Opera in St Petersburg in 1879, resigning in 1886 to take up the important post of conductor and composer to the Imperial Ballet. He worked with most of the leading

dancers and choreographers in Russia at that time, and conducted the first performances of Tchaikovsky's *Sleeping Beauty* and *Nutcracker*, and of Glazunov's *Raymonda* (1898); he made a new version of *Swan Lake*, for which he orchestrated some of Tchaikovsky's piano pieces. His own workmanlike ballet scores, though musically inferior to those of his better-known contemporaries, were popular in their day; *Arlekinada* (also known as *Harlequin's Millions*), first performed in 1900, enjoyed international renown. The once celebrated *Serenade* from this ballet was published in every kind of arrangement and is still occasionally included in concerts of light music. Drigo made occasional visits to Italy during his voluntary exile, and in 1920, when he found life in post-Revolutionary Russia uncongenial, he returned to Padua, where he lived quietly until his death.

 JENNIFER SPENCER

Drinker, Henry S(andwith) (b Philadelphia, 15 Sept 1880; d Merion, Penn., 9 March 1965). American music scholar. He was a lawyer by profession, but devoted himself in his spare time to music. He held informal gatherings at his home to sight-sing part-music, and from these developed the Accademia dei Dilettanti di Musica, a mixed choir that met at the Drinkers' home from 1930 to 1960 to study and perform vocal music of the 17th to 20th centuries; he also conducted larger groups on Sunday evenings. Concerned that the words should be understood but also fit the music, Drinker began a series of translations remarkable for their consistent craftsmanship, faithful prosody and sheer number: between 1941 and 1954 he translated many Bach works (212 cantatas, the *St Matthew Passion* and the *St John Passion*, the Easter and Christmas oratorios and the *Magnificat*), all Brahms's vocal works, all Mozart's choral works, all Schumann's and Metner's songs, all the solo songs of Wolf, Musorgsky and Schubert and all Schubert's partsongs. His devotion and scholarship were recognized in honorary degrees awarded him by the University of Pennsylvania (1942), Oberlin College (1944) and Haverford College (1949), and in his appointments as adviser to the Juilliard School of Music, the Westminster Choir College, the Philadelphia Musical Fund Society, the American Choir Foundation and the Settlement Music School of Philadelphia.

His wife, Sophie H(utchinson) Drinker (1888–1968), championed the cause of women in music, and to supplement her husband's choral work founded a women's chorus, the Montgomery Singers, which she invited women to conduct. She wrote *Brahms and his Women's Choruses* (Merion, Penn., 1952) and *Music and Women: the Story of Women in their Relation to Music* (New York, 1948), and was awarded the MusD by Smith College, Northampton, Mass., in 1949. His sister, Catherine Drinker Bowen (b 1897), is a well-known biographer, whose works include *Beloved Friend: the Story of Tchaikovsky and Nadejda von Meck* (New York, 1937) and *Free Artist: the Story of Anton and Nicholas Rubinstein* (New York, 1939).

The Drinker Library of Choral Music is at the Free Library of Philadelphia; Sophie Drinker's collection is at Smith College.

JON NEWSOM

Drischner, Max (b Priebrorn, nr. Breslau, 31 Jan 1891; d Goslar, 25 April 1971). German church musician and composer. He studied theology at the universities of Leipzig and Breslau, where he also took up music under Paul Hieschler and Hermann Lilge. In Berlin he then studied with Arthur Egidi; he also studied the harpsichord with Landowska and the organ with Schweitzer. In the early 1920s he was active in concerts devoted to the revival of old music. Drischner's main position, from 1924 until the end of World War II, was at the Nikolaikirche in Brieg, where he was organist and cantor. The Engler organ there was restored under his direction in 1926–8. After the war he lived in Erfurt, Herrenburg and finally settled in Goslar in 1955. His published compositions are mainly sacred choral and organ music. The organ music in particular is based on older models, especially in the use of chorales. Much of the published sacred vocal music is intentionally simple; often the accompaniment may be played on the harmonium or piano in place of the organ.

WORKS

WILLIAM D. GUDGER

Driscoll, Loren (b Wyoming, 14 April 1928). American tenor. He studied at Syracuse University and at Boston

University. After singing frequently on American radio, he was engaged by the Deutsche Oper, Berlin, in 1962, and has been a valuable member of the company. He created Lord Barrat in Henze's *Der junge Lord* at Berlin (1965) and Dionysus in *The Bassarids* at Salzburg (1966). His light, lyrical voice is always used with intelligence and a fine regard for the text, both in opera and in his wide concert repertory.

ALAN BLYTH

Driving. A 17th-century term for syncopation. 'Driving note' is a syncopated note.

Droardus Trecensis. An otherwise obscure figure. Magister Droard of Troyes is named in the 12th-century Calixtine MS (*E-SC*) as author of two florid two-part settings of the *Benedicamus Domino*.

Drocos, Jean. An alternative name of Obadiah the Proselyte; see JEWISH MUSIC, §1, 2(iv).

Drogheda, 11th Earl of [Ponsonby, Charles Garrett] (*b* London, 23 April 1910). British financier and opera administrator. He was educated at Eton and Trinity College, Cambridge. In the early 1930s he founded a chamber music society with friends and helped to promote newly formed quartets; after the war he took an active part in the development of the Haydn-Mozart Society. He joined the board of the Royal Opera House, Covent Garden, in 1954, and was elected chairman in 1958, remaining in that post until 1974. Here he helped in engaging Georg Solti as musical director in 1961, and with him and Sir David Webster he effected the transformation of the Royal Opera from a resident company based on British singers giving opera in repertory to an international house based on a *stagione* system and using the world's leading artists. He took a constant, positive interest in both the artistic and financial sides of running Covent Garden, including the creation of the Royal Opera House Benevolent Fund. Partly through his influence, opera and ballet were more widely accepted as part of the national heritage during his chairmanship. He is also joint chairman of Youth and Music and president of the Contemporary Dance Theatre. His career outside music was mostly spent on the *Financial Times* (as managing director 1945-70, and subsequently as chairman), where he took a keen interest in the day-to-day running of the newspaper's arts page.

ALAN BLYTH

Droghierina, La. See CHIMENTI, MARGHERITA.

Dromael [Dromal, Droumael], **Jean** (*b* c1600; *d* ?Liège, ?after 1650). South Netherlands composer and singer. He is referred to as a *duodenus* at the collegiate church of Ste Croix, Liège, on 17 August 1615, and he seems to have spent his life in its service. By June 1627 he had taken orders. About 1629 he seems to have become succentor (the title-pages of his publications of 1640 and 1642 record him as such), and he was almost certainly the succentor who appears in a document giving a complete list of the personnel at Ste Croix on 9 September 1650. He was no longer succentor by 3 December 1655.

JOSÉ QUITIN

Drone (i) (Fr. *bourdon*; Ger. *Bordun* or, with bagpipes, *Stimmer*, *Brummer*; It. *bordone*). A sustained droning sound, or a musical instrument or part of an instrument which produces such a sound and maintains it through a piece or section of music. Instrumentally produced drones generally accompany melodies played on the same instrument or on another, and are usually tuned to the keynote of the melodies and often to its 5th also. Traditionally the term is best known in connection with bagpipes, most of which comprise one or more drones. It has also been used to denote the drone strings of a hurdy-gurdy.

Studies of non-European and folk music have brought the terms 'drone' and 'bourdon' into wide use, e.g. for sustained open-string techniques on folk fiddles and lutes; the held tonic required by most Indian music and often supplied by a separate performer, a deep note hummed by a flautist as he plays; the monotone of Tibetan trumpets; or the continuous sound produced on a string drum or Provençal tabor. The term has also been employed in historical studies in connection with early organs.

The origins of the drone are uncertain. It occurs in primitive music but is not broadly characteristic of it. The drone probably became established during the early growth of musical systems in western Asia, though there is no strong evidence for it before Hellenistic times, when it had a place in at least some kinds of popular music (see BAGPIPE).

ANTHONY C. BAINES

Drone (ii). See BUMBASS.

Droste-Hülshoff, Annette von (*b* Hülshoff, nr. Münster, Westphalia, 14 Jan 1797. *d* Meersburg, 24 May 1848). German poet and composer. She came from a musical family and studied the piano and singing, beginning to compose around 1820. Largely through the influence of her brother-in-law, Lassberg, she became interested in collecting old *Volkslieder* and contributed to the collections of Ludwig Uhland and August von Haxthausen. This interest culminated in her arrangement of the Lochamer Liederbuch for voice and piano (c1836). In addition, she composed many lieder to poetry by herself and others (e.g. Goethe, Brentano and Byron). Her literary talent was so highly respected that Robert Schumann, through Clara, requested an opera libretto from her in 1845. She began composing several operas of her own, but these were never completed. Compared to that of contemporary lieder, Droste-Hülshoff's style is simple, showing the influence of the *Volkslied*, and with the voice usually dominating the piano. A few lieder are recitative-like in texture (e.g. *Wer nie sein Brot*), while others contain occasional awkward melodic dissonances and harmonic cross-relations. Collections of her songs have been edited by Christoph Schlüter (*Lieder mit Klavier-Begleitung*, Münster, 1877) and by

K. G. Fellerer (*Lieder und Gesänge*, Münster, 1954). Although composition was more important to her than writing poetry, her lasting creative achievement is as a poet rather than a composer.

Drouet, Louis (b Amsterdam, 1792; d Berne, 8 Sept 1873). French flautist. He played at the Paris Conservatoire at the age of seven, and though he did not study his instrument at that institution, it is recorded that he worked at composition with Méhul and Reicha. In the early 1800s he made successful concert tours with his father, and about 1808 he was appointed soloist to the King of Holland. In 1811 came an invitation from the emperor to visit Paris, where he received a similar appointment. Drouet's success in Paris was immense, though in the opinion of many he remained second to Tulou. After the restoration of Louis XVIII he was appointed first flute in the royal chapel. Success and honours in France did not, however, reduce his desire to appear as a travelling virtuoso.

In 1817 Drouet paid his first visit to England, where he produced a sensation, though here he had to contend with the rivalry of Charles Nicholson, whose fluency and huge tone had greatly influenced English taste. Some said Drouet disguised poor intonation by sheer technical brilliance. About 1818 Drouet set up a flute business in London, and instruments were made to his specification by Cornelius Ward, but after a year this failed in the face of the popularity of Nicholson's type of instrument. Late in 1819 Drouet went again on his travels in Europe, once more with great success. For three years he stayed in Naples as director of the Royal Opera, and then returned to Holland, where he lived in some obscurity. In 1828 Mendelssohn persuaded him out of retirement, and the next year he again went to England. Between then and 1860 he went to Paris, Gotha (where he remained for 15 years), London again, New York and Frankfurt.

Drouet never used nor recommended a flute with more than eight keys, though by 1827 (when he produced an admirable tutor in parallel columns, French and German) he was using an up-to-date French-type flute with pillar-mounted keys. His method of double-tonguing did not always meet with approval though it seems to have served him well. It is said that he used the word 'territory' in demonstrating it to English pupils.

In addition to his tutor, Drouet left a large number of compositions, none of great musical merit though admirably conceived as vehicles for virtuoso performance. His *Cent études pour la flûte* is, however, a remarkable work running to 321 folio pages, and was reprinted several times. Some of his duos etc, composed expressly as technical studies, are also still valuable.

PHILIP BATE

Droumael, Jean. See DROMAEL, JEAN.

Drozdzov, Anatoly Nikolayevich (b Saratov, ? 4 Nov 1883; d Moscow, 10 Sept 1950). Russian composer,

musicologist and teacher. Information on Drozdov, who for a long time was not mentioned in the USSR, is contradictory and indefinite; even his year of birth is unsure, though early sources give 1883. He apparently studied at the Ecole de Droit in Paris (1902-4) and then simultaneously at the law faculty and the conservatory in St Petersburg. In 1905 he took part in the revolutionary unrest at the conservatory, from which he graduated in 1909 as a piano pupil of Dubasov. He graduated from the university in 1910. From that year he worked as a lecturer and writer on music, holding appointments as director and piano teacher at the Ekaterinodar Music Institute (1911-16), teacher of the theory of musical expression at the Petrograd Conservatory (1916-17), professor of history at the Saratov Conservatory (1918-20), teacher at the Moscow Conservatory (1920-24), piano teacher at the Skryabin Musical Technical College, Moscow (1922-31), director of the Skryabin College (1927-8), lecturer and pianist at the Philharmonic (1932-44) and piano teacher at the October Revolution Music Teaching Institute (1941-6).

Drozdzov composed orchestral works, piano pieces, chamber music, choral pieces and songs, influenced by Wagner, Liszt and contemporary French composers, he was stylistically closer to Rakhmaninov, Lyadov or Lyapunov than, for example, Skryabin. As an editor and arranger he concentrated on Ukrainian folk music.

DETLEF GOJOWY

Drozdowski, Jan [Jordan, Jan] (b Kraków, 2 Feb 1857; d Kraków, 21 Jan 1918). Polish writer on music, pedagogue and pianist. His father fought in the Revolution of 1831, after which he settled in Kraków and founded one of the first piano factories in Poland. Drozdowski studied music at Kraków with Kazimierz Hofman, Antoni Plachecki and Władysław Żeleński, at Warsaw with Aleksander Michałowski and at the Vienna Conservatory with Julius Epstein, Dachs and Bruckner. From 1889 until his death he taught the piano at the Kraków Conservatory and lectured on the history and theory of music. He was also a music critic, occasionally writing under the pseudonym Jan Jordan.

ELŻBIETA DZIEBOWSKA

Drucker, Stanley (b Brooklyn, NY, 4 Feb 1929) American clarinetist. He started playing at the age of ten and became a pupil of Leon Russianoff. At 16 he was appointed first clarinet in the Indianapolis SO and at 19 joined the New York PO, becoming its principal clarinetist in 1960. As a soloist Drucker has performed with the Busch Chamber Players and the Juilliard Quartet. He has not followed the modern free style of playing but the classical, achieving impeccable control of tone and phrasing. In 1968 he joined the staff of the Juilliard School. He has edited clarinet music and compiled an exhaustive series of orchestral studies.

PAMELA WESTON

Druckman, Jacob (b Philadelphia, 26 June 1928). American composer. The most important influences on his early compositional development were his studies with Persichetti and Mennin at the Juilliard School (1949–56), with Copland at Tanglewood (1949–50) and at the Ecole Normale de Musique, Paris, while on a Fulbright Fellowship (1954). After completing the master's degree, he returned to teach at the Juilliard School and remained there until 1972. During that period he also taught part-time at Bard College (1961–7) and served for one year (1971–2) as director of the Yale University electronic music studio. In 1972 he was appointed associate professor of composition and director of the electronic music studio at Brooklyn College, City University of New York.

Many of Druckman's compositions of the 1950s are for small ensembles of instruments and voices, but he

also composed a number of ballet scores and other orchestral and choral compositions for larger ensembles. His concern with the voice continued into the early 1960s, but then electronic music began to arouse his interest, and in 1965 he became associated with the Columbia-Princeton Electronic Music Center. His work in this medium gave rise to a series of major compositions for tape and live performers, compositions whose exploration of the interaction of electronic and live sound is of particular interest and value. He received a second Guggenheim Fellowship to work in the studios of the ORTF (1968), a commission from the Juilliard Quartet for his String Quartet no.2 (1966) and one from the Koussevitzky Foundation for *Windows* for orchestra (1972), which won him a Pulitzer Prize for that year. Druckman's music is highly dramatic, rich in gesture and incident, and its aptness for dance is evident in the use of several of his scores by the Joffrey City Center Ballet. His writings include an article on Stravinsky's orchestral style for the *Juilliard Review* of spring 1957

AUSTIN CLARKSON

Drum (Fr. *tambour*; Ger. *Trommel*; It. *tamburo*). A percussion instrument made in many varieties that has been known in almost every age and country.

1 General 2 Bass drum 3 Side drum 4 Tenor drum

1 GENERAL. A drum may be defined as a membranophone, composed of a skin or skins (or plastic material) stretched over a frame or body-shell of wood, metal, earthenware or bone. The so-called slit-drum is in fact a percussion tube and thus an idiophone, not a membranophone; for this reason it was formerly called a slit-gong. Drums are sounded in three ways: percussion, where they are struck with the bare hands or with beaters, or shaken as in the case of rattle drums in India and Tibet; friction, where the membrane, or a stick or cord in contact with it, is rubbed, as in many parts of Africa, and plucking, where a string knotted below the membrane is plucked so that its vibrations are transferred to the skin, as in Indian plucked drums. Most drums, however, are struck, and may be classified according to the shape of their body-shell as follows: kettledrums, where the body is bowl-shaped; tubular drums, subdivided into those with cylindrical, barrel-shaped, double-conical, hourglass-shaped, conical or goblet-shaped bodies; and frame drums (see figs.1, 2 and 3). Tubular drums may be further subdivided into those which have a single skin and are open-ended, a single skin and are closed, or a double skin. The membrane in each case may be glued, nailed, laced or lapped to the body of the drum, or attached by a combination of these methods. In kettledrums and tubular drums the body-shell acts as a resonator.

Drums, with other percussion instruments such as

rattles and concussion sticks, were probably among the earliest instruments. The possibility of the early use of a skin held taut over a receptacle is evident in certain extant instruments in South Africa and elsewhere. There is evidence that the first membrane drums proper consisted of naturally hollow tree trunks (or vessels hollowed by simple tools or fire) covered at one or both ends with the skins of water animals, fish or reptiles, and later with the skins of hunted game and cattle.

In many areas, in addition to their use as message drums and rhythm instruments, drums serve numerous sacred or ritual purposes and are credited with magical powers. The drum has been and still is indispensable in many parts of the world, and remains the most compel-

ling and significant of all percussion instruments. In the most ancient civilizations the popularity of all kinds of drum is established by numerous representations of the instrument in a variety of shapes and sizes in the art of Egypt, Assyria, India and Persia. Membrane drums in the form of the timpanon and the tambourine were known to the Greeks and Romans. Small kettledrums in pairs (hemispherical or egg-shaped) and tabors of Arabic or Saracenic origin came to Europe during the period of the 13th-century crusades. Larger kettledrums reached the West from the Ottoman Empire during the 15th century. These inspired the European use of cavalry kettledrums. The large tabor, the precursor of the present military and orchestral side drum, appeared

in Europe during the 13th century, being adopted with other customs by the armies of western Europe from their oriental foes.

This article deals with the non-tunable membrane drum in Western art music. For details of other types of drum and their regional variants see **FRAME DRUM**, **FRICTION DRUM**, **KETTLEDRUM** and **STRING DRUM**, for a list of many non-Western drums, together with an index of references to such instruments (and illustrations of them), see the entry 'Drum' in Appendix A.

In the orchestra, membrane drums fall into two divisions: instruments producing sounds of definite musical pitch and instruments of indeterminate pitch. The most important instruments in the first category are

kettledrums (**TIMPANI**). In the second category the most important instruments are the bass, side and tenor drums.

2. **BASS DRUM** (Fr. *grosse caisse*; Ger. *grosse Trommel*; It. *gran cassa*, *gran tamburo*). The largest of the orchestral drums of indefinite pitch, consisting of a cylindrical shell of wood with two heads (hide or plastic) lapped onto hoops placed over the open ends of the shell and secured by counter-hoops. The heads are tensioned by means of threaded rods which lie across the shell. (Rope-tensioning is now almost exclusive to regimental drums; see fig.4.) This screw-tensioning is arranged in two ways: single tension, in which each rod runs from hoop to hoop and the heads are drawn up together; and

2. Silhouettes of drum shapes: (a) kettledrum, (b) tubular or cylindrical, (c) barrel, (d) conical, (e) double-conical, (f) hourglass, (g) goblet, (h) frame

3 Various internal drum shapes in cross-section: (a) conical drum with hourglass-shaped interior (*këndang*, Bali, Indonesia), (b) single-skin drum (*engalabi*, Ganda people, Uganda), (c) goblet drum (*ntumbo*, Nyoro people, Uganda)

separate tension, in which each head is drawn up independently. The single-headed bass drum known as the gong drum, popular for over a century (particularly in England), is less seen today. The gong drum has a narrow shell open on one side, the other side being closed with a screw-tensioned drumhead. Despite its admirable resonance, a single-headed bass drum fails in certain respects, for unless the diameter of the head is exceptionally large, the instrument tends to give off a definite note (as do all single-headed drums). There is also a slight lack of depth in the tone produced from a drumhead mounted on a narrow open cylinder compared with that produced when a deeper cylinder is enclosed with two drumheads. The orchestral bass drum should be not less than 80 cm in diameter and 40 cm deep. Drums with a diameter of approximately 100 cm and a depth of 50 cm are not unusual. Smaller drums serve particular purposes in the theatre, light orchestras and rhythm bands.

In the large orchestra the bass drum is normally played from a standing position and is supported on a stand or suspended in a frame with a swivel attachment for moving the instrument to any angle (see fig. 5). It is usual for the drum to be played with the heads vertical (as on the march), though, in certain circumstances it is played upright. For the normal single stroke the drum is struck with a large felt-headed stick of sufficient weight to extract the full tone. For general purposes the head is struck with a glancing blow midway between the centre and the rim. The beater is usually held in the right hand, the left hand (in the case of a single-headed drum) controlling the length of the note where required. With a double-headed drum, the fingers of the right hand 'still' the vibrations, while the left hand controls the reverberation of the opposite head. In a succession of short notes, the drum is struck in the centre to minimize the sonority. A tremolo is produced (as is the roll on the tympani) by single beats from hand to hand. Less bulky beaters, such as those used on the tympani, are frequently used for the roll; other beaters to suit particular purposes include those with heads of hard felt or wood. Occasionally, a sustained note is effected by means of a double-headed beater (formerly called a *tampon*). Here, a rapid oscillating movement of the wrist of one hand brings both heads of the stick into contact with the drumhead. (This effect was scored for by Dukas in *L'apprenti sorcier*, and by Stravinsky in *The Firebird*). A roll is produced with a double-headed beater when one player combines cymbals with bass drum; this orchestral practice infuriated Berlioz, who considered the result an ignoble noise, fit only for bands at tea-gardens (see CYMBALS).

In the East a form of bass drum dates back to the Sumerians. Instruments almost the height of the player are seen on Sumerian sculptures dated 2500 BC. Egyptian relics include drums in various shapes: with large (braced) heads, or with narrow heads and deep shells similar to the English long drum. The evidence of Eastern legends suggests that the drum was introduced into China from Central Asia as early as 3500 BC. A giant drum, the *hiuen-kou*, is said to have been invented for the exclusive use of the imperial palace in 1122 BC. In Europe, the drum described by Isidore of Seville (c600 AD) as *symphonia*, 'a hollow wood, covered with skin on either end, that the musicians strike with sticks from both sides' suggests a form of bass drum. An early 16th-century painting by Carpaccio (fig. 6) shows a Turkish

musician playing a drum almost exactly the same shape and size as the modern military bass drum, which in fact was an adaptation of the *tabl' turkî*, and was known as the Turkish drum until the early 19th century. A large cylindrical drum supported on the player's chest is seen on a mid-16th century German engraving.

The bass drum remained a rarity in Europe until the 18th century when the imitation of the Turkish Janissary bands became fashionable in European military bands and, on appropriate occasions, in orchestral music. Early experiments are seen in Freschi's opera *Berenice* performed in 1680, and in an early 18th-century work by Gottfried Finger entitled *Concerto alla turcheſta*. Among the Classical composers Gluck seems to have made the earliest use of the bass drum, in *Le cadix dupé* (1761). He was followed by Mozart in *Die Entführung* (1782), by Haydn in his 'Military' Symphony (1794) and by Beethoven in his Ninth Symphony (1823). The drum used in the orchestra until well into the 19th century could have been the narrow Turkish type with one or possibly two heads, or a double-headed drum with a cylindrical shell of wood, longer from head to head than was its diameter which was approximately 50 cm. This instrument was known in England as the long drum. It was rope-tensioned in the manner of many medieval drums; the cord passed through holes in the counter-hoops and across the shell in 'V' formation, and was tightened by leather braces known as buffs or tug-ears. Since the time of Haydn and Mozart a long drum has frequently been illustrated as being struck in the oriental fashion, that is with a stick on one side, and a switch of twigs or a split-rod on the other side, or at times the switch striking the frame of the drum; this effect was indicated in the notation by the use of both up and down tails, the upward tails being for the switch (see JANISSARY MUSIC). The long drum continued as an instrument of the military band and elsewhere throughout the 18th century and the early part of the 19th century. It was eventually displaced by the 'military' bass drum, a rope-tensioned drum with a narrow shell. Screw-tensioning was applied to instruments of this type before 1850. Kastner in his *Manuel général de musique militaire* (1848) illustrated a *grosse caisse nouveau modèle* with 15 tensioning rods.

In 1857 the British firm of Distin built the 'world's largest drum', a single-headed drum with a diameter of about 240 cm. There are now larger drums, such as the 'Disneyland Big Bass Drum' built in the USA in 1961. This instrument has a diameter of around 370 cm. While instruments of this description are rarely seen on the concert platform, it has become customary to use the largest available bass drum in Verdi's Requiem, and consequently a large orchestral drum is often referred to as a 'Verdi *gran cassa*', a term which could be applied to the renowned Lambeg drum, a large rope-tensioned bass drum used in functions (including drumming competitions) connected with the Orange Lodges of Northern Ireland.

The fact that many notable composers have used the bass drum so freely established its importance as an orchestral instrument, and one that is effective over a wide dynamic, rhythmic and colour range. It appears constantly in orchestral scores from Gluck onwards, in early instances as a timekeeper. Romantic composers such as Berlioz, Liszt (who is credited with having introduced the roll in *Ce qu'on entend sur la montagne*, 1849), Wagner, Verdi and Sibelius used the instrument

4 Military bass drum (unbraced) by H. Potter, London, c1930

5. Orchestral bass drum on swivel stand by the L. W. Hunt Drum Co., London, c1935

Arbeau in his *Orchésographie* (1588) described and illustrated a French side drum measuring (he said) two-and-a-half *pieds* in diameter and depth, closed at each end with parchment skins (secured by two hoops) bound with cords to keep them taut and played with two sticks. Unlike the tabor the side drum was invariably played with two sticks, and by the 16th century the snare was below the lower head (where it is today), instead of above the upper head as on the tabor. Praetorius in his *Syntagma musicum*, ii (2/1619) illustrated a side drum 59 cm in diameter and depth (see fig.12). This instrument had a single snare on the lower head.

Little music was written for the drum during the Middle Ages. Such drum music as still exists is military, and consists mainly of instructions for the instrument's use in signalling and pace-making, little being said regarding its technique. Arbeau's *Orchésographie* is the earliest important source of information. Arbeau set down certain rhythms presumably used by the French drummers of his period. He listed the sounds he gave to the various units in his tabulations as follows: minim, one tap of the stick - *tan*; two crotchets, two taps of the stick - *tere*; four quavers, four taps of the stick - *fre*. Mersenne in his *Harmonie universelle* (1636-7) spoke of the round beat (*baton rompu*); single beating (*baton rond*), single and double beatings (*baton meslé*); and of players who beat the drum at such a speed that it was impossible to follow each beat.

In addition to its use as a military instrument the side drum served a purpose in naval routine. On board ship (until 1865) it was concerned with action-calls, burial at sea, flogging and 'walking the plank'. Drake's drum (a side drum) is considered to be the most famous object in all the Drake sagas. It is immortalized in Henry Newbolt's famous poem: '... an' drum them up the Channel as we drummed them long ago'.

Francis Markham in his *Five Decades and Epistles of Warre* (1622) referred to the duties of military drummers in sounding the discharge or breaking up of the Watch. Randle Holme III in his *Academy of Armoury* (before 1688) referred to such rudimentary drum beatings as 'flam', 'dragge', 'rooffe', 'diddle' and the 'rowle'. An Italian book, *Il torneo*, written in 1621 by Pistofilo, may be the earliest work in which military music is notated. The oldest surviving English document dealing with drum music and instructions to drummers is a warrant (c1632) of Charles I directing the revival of an old English march (ex 3). The warrant concludes 'It pleased our late deare brother prince Henry [d 1612] to revive and rectifie the same ordayning an establishment of one certaine measure, which was beaten in his presence at Greenwich, anno 1610'.

Ex 3

The Voluntary before the March

possible interpretation

The side drum continued to occupy a place of honour in the regiment in peace and war. Emblazoned on its shell were the regiment's crest and battle honours. Throughout the 18th century and onwards it continued to be a constant companion of the fife, as important a

12. Side drums (one showing snare) from 'Syntagma musicum', ii (2/1619) by Praetorius

combination to the foot regiment as the trumpets and kettledrums to the cavalry. During the 18th and 19th centuries, various manuals concerning drum routines were issued in Europe and the USA. Military drumming at this time was taught by rote and, in addition to the numerous rudiments, the drummer was obliged to commit to memory a great number of calls - solo, or as an accompaniment to the fife. Until superseded by the bugle, the drum conveyed the word of command to the troops. As with the earlier drum beatings of Arbeau, these signals were immediately recognizable (ex.4). In addition to its function in military circles, the side drum had numerous civil duties, some of which are maintained, e.g. the 'town drum' replacing the town crier's handbell.

Ex 4

By the mid-19th century the side drum had changed structurally. Its diameter (and in some cases its depth) had been reduced, and in many cases the shell was now of brass. From 1837 onwards, due (it is generally conceded) to the inventive genius of the English maker Cornelius Ward, a method of applying tension by using screws was employed. By this time, composers, notably Rossini, were making increasing use of the side drum, which had already been used in a few 18th-century orchestral scores. Marais appears to have been the first composer to have used a form of side drum in the orchestra - *tambourin* in *Alcione*, 1706 (see *TAMBOURIN* (ii)). Handel gave instructions for the use of side drums in the *Menuet* from his *Music for the Royal Fireworks* (1749). Gluck specified 'tambour' in *Iphigénie en Tauride* (1779). In Beethoven's 'Battle' Symphony (1813) side drums with individual calls represent the opposing armies. Rossini elevated the side drum to solo rank in the well-known introductory rolls in *La gazza ladra* (1817). This could perhaps have earned him his nickname of 'Tamburrossini'. Berlioz (not surprisingly) emphasized that several side drums played together are preferable to one alone. His 'dream' ensemble of 467 instruments (53 percussionists) included six *tambours*. In the 'Marche funèbre' from *Hamlet*, Berlioz requested six *tambour-voués ou sans timbre*.

(covered or unsnared). The side drum is prominent in the works of Rimsky-Korsakov, Elgar, Ravel, Nielsen, Shostakovich, Britten and Sessions. Ravel's novel employment of the instrument in his *Bolero* (a two-bar phrase played 169 times) is well known, as is Nielsen's use of the side drum in his *Clarinet Concerto* (1928), and in his *Fifth Symphony* (1921–2), in which the player improvises.

20th-century composers have taken full advantage of the rhythmic resources and the numerous tone-colours possible from the side drum, and it is no longer an instrument mainly concerned with the demarcation of rhythm, punctuation, or with strong characterization. The use of the side drum with snares released is common, as is the striking of the rim, and the use of wire brushes and sticks of various types. The 'rim shot' (in which the rim and head are struck simultaneously with one stick, or alternatively one stick, laid with its tip on the skin and the shaft on the rim, is struck with the other) is employed by Milhaud (*La création du monde*, 1923), Copland (*Third Symphony*), Malcolm Arnold (*Beckus the Dandipratt*, 1948) and Elliott Carter (*Variations for Orchestra*, 1954–5). Bartók made great use of the side drum, snared and unsnared, and also the contrasting tones from the edge and centre of the drum-head, in, for example, his *Cantata profana* (1930), the *First Piano Concerto* (1926) and his *Sonata for Two Pianos and Percussion* (1937). The use of wire brushes (as used in jazz) was requested by Walton in the original version of *Façade* (1923). Challenging sequences for the side drum occur in many 20th-century compositions, for example Ives's *Three Places in New England* (1914), Berio's *Tempi concertati* (1959) and Carter's *Concerto for Orchestra* (1969). Literature for the modern percussion ensemble includes works for a 'solo' side drum. Rolf Liebermann's *Geigy Festival Concerto* (1958) is a full-scale concerto for the side drum, embracing the individual technique of the Basle side drum (ex 5). In orchestral music the part for the side drum is written on a single line or given a space in the staff, usually the third space from the bottom.

Ex 5

4. TENOR DRUM (Fr. *caisse roulante*, *caisse sourde*; Ger. *Rührtrommel*, *Rolltrommel*; It. *cassa rullante*). A cylindrical drum, larger in diameter than depth, measuring approximately 45 cm by 36 cm. It has no snares, and tonally is midway between the bass drum and unsnared side drum. The subdued tone of the tenor drum in comparison to that of the snared side drum has been likened to the contrasting voices of the sergeant-major and the chaplain. In appearance it resembles a large side drum and is similarly constructed with a shell of wood or occasionally metal. Originally a rope-braced drum, the tenor drum is now frequently rod-tensioned (see

13 Modern tenor drum by the Premier Drum Co Leicester

fig 13) It is played with hard or soft sticks according to the required purpose. In the marching band it is slung from the belt or shoulder and supported on the left leg like the regimental side drum. In the orchestra it rests on a similar stand to that used for the side drum.

Technically, strokes on the tenor drum are less involved than those employed on the side drum, but they demand the utmost dexterity. In the drum corps (ensemble of drums, bugles and flutes) in which the tenor drum is an essential instrument, the performing of elaborate patterns is combined with stick flourishes, making the tenor drummer as spectacular a showman as the bass drummer. In the drum corps the tenor drum is normally played with felt-headed sticks (usually secured to the wrist). The sticks are held identically (like the right-hand side-drum stick) and the single-stroke roll employed. In the orchestra, the tenor drum is played with soft-headed sticks or side drum sticks, side drum technique is used. Its individual timbre among the orchestral instruments of percussion is well described by Cecil Forsyth who said in his *Orchestration*: 'The quality of the Tenor-drum, especially when used indoors, is curiously impressive; its flavour sombre and antique'.

Though in principle one of the most ancient and universal of all drums, the true tenor drum as known in military circles made a comparatively late appearance. In England, France and Germany, it first appeared in the military band from the early 19th century. Kastner illustrated rope-tensioned and rod-tensioned tenor drums in his *Manuel général de musique militaire* (1848). Berlioz (who contended that the instrument Gluck specified in *Iphigénie en Tauride* was a tenor drum, or *caisse roulante*) scored for two tenor drums in the *Grande messe des morts*, one tuned to B♭. His *Te Deum* requires six tenor drums. Wagner wrote for tenor drum (*Rührtrommel*) in *Rienzi*, *Lohengrin*, *Die Walküre* and *Parsifal*. Strauss used the instrument in *Ein Heldenleben*, and Elgar in his third *Pomp and Circumstance* march. Other composers to write for the tenor drum include Stravinsky, Honegger, Milhaud,

Copland and Britten.

In musical notation a single line or a space in the staff (most often the second from the bottom) is allotted to the tenor drum. It is generally agreed that a standardised way of notating percussion music is long overdue and that a more careful use of the normal staff could be made. Though the normal staff is admittedly in many cases quite inadequate, an almost immutable allocation could be observed for unpitched instruments requiring no clef, such as the bass drum, tenor drum and side drum.

Drum-calls. Military signals played on the side drum: see MILITARY CALLS

Drum-chime. Generic term for a set of drums tuned to a musical scale. In Africa, where drum ensembles are common, a line cannot easily be drawn between true drum-chimes (often tuned and arranged scalewise to cover one or more octaves) and sets of drums also carefully tuned to discrete pitches within the particular tonal system, and used for accompanying songs and dances with a variety of melodic and rhythmic patterns.

Drum-chimes occur in south and south-east Asia and in east Africa. In north-central Sumatra a set called *taganing* plays a central role in the ritual orchestras of the Batak-speaking peoples, being accompanied by another drum, gongs and a shawm (see INDONESIA, fig.29). Multi-octave sets placed in circular frames are used in traditional Thai and Burmese ensembles, in Burma the chime is called *hsaing-waing* or *pat-waing* (see BURMA, §§2 and 4 and fig.1). A set of *tablā* tuned scalewise and known as *tablātārang* is sometimes

featured in concerts of north Indian classical music to the accompaniment of ordinary *tablā* and the *tamburā* (classical drone lute). A 17th-century north Indian illustration shows an ensemble of 12 hand-beaten kettledrums grouped in pairs, one pair to a player.

In east Africa drum-chimes are known at Aksum (Ethiopia), in three places in Uganda (one being the former kingdom of Buganda where the *entenga* chime was one of the instruments of the former royal court), and among the Sena and Mang'anja peoples of Mozambique, where the drum-chime is called *likhuba* or *ntanda*. The *entenga* (see illustration) is a good example of a true drum-chime in that all but the largest three drums are used for playing a repertory of vocally derived melodies (the three largest provide a rhythmic accompaniment). The *entenga*'s limited distribution and certain features (by no means common to all sets) have led scholars to speculate on links between African sets and those of Asia. Such features include the use of long curved beaters and an association with xylophone-playing traditions.

 ERNST HEINS, PETER COOKE

Drum-major. A non-commissioned officer in the army, or an individual in civil life, who directs drummers with fifers and buglers. Despite a widespread belief that the military office is no older than the reign of Charles II, it is mentioned, and its duties are defined, as early as 1590. Thomas Digges, in *An Arithmetical Warlike Treatise* (London, 1590), said that 'there ought to be a Dromme Maior of every regiment' who should be a man 'of great perfection in his science'. That the author had originally called this officer the 'chief drummer' in the first edition (1579) of his book which he changed to 'drum major' in the later issue, is some slight indication of the date of the office in Britain. Robert Barret in *Soldier of Fortune: the Theorie and Practike of Moderne Warres* (London, 1598) was equally insistent on the importance of the office. It was certainly commonly adopted on the Continent; the *tamburo generale* is described in *Della osservanza militare* of Francesco Ferretti (Venice, 1568), the 'generall drum' in Vega (*De re militari*, 1582), the 'drummer major' by Robert Monroe in *Monro His Expedition* (1637) and the 'colonel-drumm' of the French by James Turner in *Pallas armata* (written 1670–71; London, 1683). Strangely, Turner expressed the opinion that although the drum-major was 'necessary enough in all Regiments of Foot' there was no place for him 'here at home'. The statement cannot be strictly correct, seeing that a dozen military writers of the 17th century described the functions of the drum-major. Gerat Barry in *A Discourse of Military Discipline* (Brussels, 1634) said that the 'Drom mayor' was responsible for the provision of 'dromes and phifes'. Robert Ward in *Animadversions of Warre* (London, 1639) included a lengthy chapter on 'the Duty and Office of . . . the Drum Major of the Regiment'. Richard Elton in *The Compleat Body of the Art Military* (London, 1650) said that as well as being proficient in the drummer's art, the drum-major 'must likewise be well skill'd in several languages and tongues'. Thomas Venn in *Military and Maritime [sic] Discipline* (London, 1672) considered him indispensable. Yet Grose held the view that the office was only universally admitted into

Entenga (drum-chime) of the Ganda people, Uganda

the English service towards the end of the reign of Charles I, although he thought it possible that some regiments that had served abroad may have adopted the drum-major. This may be true enough since Hepburn's Regiment (the Royal Scots) had a drum-major in 1637, as they did when they entered the British service in 1666. France, where this regiment had served, was proud of the *tambour-major* as is clear from Du Praissac in *The Art of Warre* (Cambridge, 1639), Alain Manesson Mallet in *Les travaux de Mars* (1684-5) and Pierre de Briquet in *Code militaire des roys de France* (Paris, 1728); there the *tambour-major* was on the regimental staff. This was his position in the British Foot Guards from 1650, and in July 1655, when the Lord Protector agreed on garrison forces for Scotland, a drum-major was similarly recognized in each of the 13 infantry regiments. In July 1657, however, the office was wholly abolished. It was not restored until January 1680, and then only to the Foot Guards. Yet in spite of this, and notwithstanding the testimony of Turner (writing in 1670-71), there is every reason to suppose that infantry regiments still continued to use the drum-major unofficially as implied by the *Commons Journal*, ix (1678), 487.

Before the establishment of a standing army in the mid-17th century, the drum-major held a rank somewhat analogous to that of a present first-class warrant officer, i.e. a position between the commissioned and non-commissioned ranks. In *The Souldiers Grammar* of G[ervase] M[arkham] (London, 1626), he was superior to the sergeant, and Du Praissac stated that 'the drum-major must be lodged near the sergeant-major [i.e. major] or in his own lodging'. He was generally the most lavishly dressed man in the regiment, as the clothing regulations and accounts reveal, and one should read the delicious anonymous satire on this in Grose's *Advice to the Officers* (1782), where he is called 'the Paris of not the Adonis of the regiment'. His 'staff' has ever been considered part of his insignia, and one of the oldest examples of this mark of office is that of the Honorable Artillery Company of London, dated 1671, still extant. Some regiments treasure staves that have been captured from the enemy as trophies. Du Praissac allowed that the drum-major might 'with his staff correct the drum-[men]s which fail in their duty'. The familiar display with this staff was officially recognized, the drum-major was required to turn it 'with an easy air once round, so as to keep time, and plant it every fourth pace' (James). If this rotating and twirling of the staff was merely a part of the 'pomp' of war, the precise angle at which this emblem of office was held was certainly the 'circumstance', because by this means were conveyed no fewer than 17 commands, without a word being spoken. In France, from Manesson Mallet's time (1684-5), the *tambour-major*, who used his *canne* for a similar purpose, abandoned it in time of war for a side drum. In the British service the same expediency found recognition, and an indent for arms and accoutrements in 1684 includes a request for 'one drum for the drum-major'. As late as 1777 *The Rudiments of War*, according to which every regiment had a drum-major, explained that 'he is always that person who beats the best drum', but the writer should have complemented it with 'in time of war'.

During the whole of the 18th century only the Foot Guards and the Royal Artillery were officially allowed a drum-major, although most, if not all, infantry regiments had one; but, being unofficial, he had no pay

from the government (Grose). He did, however, 'receive some addition by stoppage from the pay of the young drummers, and contributions of the captains'. Notwithstanding this, both the numerous general orders and the discipline of war gave the drum-major full recognition, as may be seen from Humphrey Bland's *A Treatise of Military Discipline* (London, 1727) to Thomas Simes's *A Military Guide for Young Officers* (London, 3/1781). However, by 1809 the commander-in-chief thought that the petty system of stoppages to finance the drum-major was improper, and the following year a drum-major, with the rank of sergeant, was allowed to infantry regiments. In the Foot Guards he was taken off the staff of the regiment, one being allowed for each battalion. In 1881 the War Office looked askance at so high-sounding a title as 'drum-major', as it seemed to convey the idea of a rank much higher than that of a non-commissioned officer. The result was that he was termed 'sergeant-drummer', but in 1928 a royal command restored the time-honoured original name.

A drum-major of the royal household was an officer who had charge of the drummers and fifers of the king's household, this position was later merged with that of drum-major general of the forces whose duty it was to furnish musicians for the services.

As with the sergeant-trumpeter of the royal household, who had charge of the trumpeters-in-ordinary, there was the need for a similar office for the control of the drummers- and fifers-in-ordinary, and as early as

Drum-major of the Royal Irish Fusiliers: lithograph (1828) by E. Hall

1552 a Robert Tedder, but although he appeared on the pay lists until 1568, the above is the only occasion on which his superiority over his fellows was recognized. When James I came to the throne (1603) there were two drummers and two fifers, and likewise at the accession of Charles I (1625). In 1628, however, there was once more an attempt to recognize a head drummer when, for the first time, a drum-major had charge of four side drummers and a fifer, a complement which continued to be the official strength until the 18th century.

The first 'King's drum-major', as he was sometimes called, or more rarely the 'chief drummer', was William Giosson, who had been drummer-in-ordinary since 1603. When he died in 1629, Robert Tedder received the appointment. At his early death, William Allen succeeded him (1630), and he appears to have retained the position until the Commonwealth. At the Restoration (1660) John Mawgridge had the post conferred on him, and three of his family, all drummers, served in the King's Musick. His livery garb, quite a handsome one, cost £52 (1674), and he appears in it, with his short staff of office, at the head of his drummers and fifer in Francis Sandford's plates of the coronation of James II. He died in 1688 and was succeeded as drum-major of the royal household by his son, also John. In the next year the younger Mawgridge was sworn 'in the place and quality of drum-major general of all his Majesty's forces'. In 1694 his warrant authorized him 'to presse or cause to be impressed from time to time such numbers of Drums, Fifes, and Hoboyes [i.e. players of these instruments] as shall be necessary for His Majesty's Service either by sea or land'. It was not a pleasant duty, and he was allowed to appoint deputies for the work. In 1719 John Clothier, who had been drummer-in-ordinary under Mawgridge since 1699, was appointed drum-major general to the forces, and was 'court drummer', i.e. drum-major, to the royal household in the 1740s, at £24 a year. John Conquest was next to hold this dual position (as late as 1769) and was probably the last to do so, since the drum-major of the Third Foot Guards (Scots Guards) became drum-major general in 1777. On 11 January 1777 a warrant was addressed to Charles Stuart, Gent., saying that the Secretary of State 'did constitute and appoint you drum-major-general of our Forces', and that he must carry out his duties 'according to the rules and discipline of war'. Since Grose (*d* 1791) spoke in the past tense of the office, it would seem to have lapsed by this date. At the same time it was mentioned by Charles James in *Universal Military Dictionary* (London, 4/1816). Today drummers and fifers for the army are supplied by voluntary enlistment.

Drumroll. See **DRUM**.

Drumslade [drumsled]. An obsolete term for a drumbeat; see **DRUM**, 83.

Drumstrokes. See **DRUM**.

Drury Lane Theatre. London theatre; the first on the site was opened in 1663, and the present one in 1812. See **LONDON**, §IV, 3.

Druschetzky [Družecký, Družechi, Držecký etc], **Georg** [Jiří] (*b* Družek, nr. Pchery, West Bohemia, 7 April 1745; *d* Buda, 6 Sept 1819). Bohemian composer. He studied the oboe with Besozzi, then became a grenadier in the 50th Infantry regiment, apparently joining it at Eger in 1762, the regiment was later at Vienna (from 1763). Enns (1764), Linz (c1771) and Braunau (1775). From 1768 to 1774 Druschetzky was a regimental musician and towards the end of his service a Kapellmeister. His first known composition is a Symphony in G dated 1770 in Linz, where he also published a Concertino in G for harpsichord by F. X. Dušek. After his resignation in mid-1775, he became a *bestallter Landschaftspauker* ('certified regional drummer') in the public service of Upper Austria, conducting the musical performances on official occasions. In about 1783 he moved to Vienna and, at his request, was made a member of the Tonkünstler-Sozietät. Unable to gain a proper footing there, he took up an offer to enter the service of Count Grassalkovicz at Pressburg (Bratislava) in 1786 or 1787. On 29 May 1795 he was apparently in Pest, where he established a connection with the household of Archduke Joseph Anton Johann; he was a composer in the archduke's service from 1807, and music director of his eight-piece wind ensemble from 1813.

Druschetzky's work was based in the relatively small area between Linz, Pressburg and Buda, the same area in which Joseph Haydn worked. His large output remains unsurveyed, works in Austria, Bohemia, Moravia, Switzerland and Hungary have been examined, but not those in Slovakia and Germany. His style adheres closely to high Classicism, though the forms and textures are rather short, simple and scantily developed. His compositions are primarily orientated towards wind instruments, for which he wrote particularly well.

ALEXANDER WEINMANN

Drusina, Benedict de (b. Elbing, East Prussia [now Poland], ?c1520-1525; d. after 1573) German composer and lutenist. He probably spent some time at the University of Frankfurt an der Oder between 1545 and 1550, although his name does not appear on the matriculation lists: in the foreword to his *Tabulatura continens insignes et selectissimas quasdam fantasias cantiones germanicas, italicas, ac gallicas passemzeo choreas et mutatas* (Frankfurt, 1556), he quoted an epigram in praise of the lute by Christoph Pannoniuss, professor at Frankfurt University. He also referred in the foreword to his far-ranging travels in Italy in the course of his lute studies and while compiling a collection of songs by leading composers (a thematic index of these works is in Kosack, p.100). While staying in Wittenberg in 1573 he transcribed into German lute tablature M. Neusiedler's *Tabulatura continens praestantissimas et selectissimas quasque cantiones, in usum testudinis* (Frankfurt, 1573). His son Peter (d. Elbing, 2 May 1611) was a composer and organist at St Mary's, Elbing; another son, Benedict, is known to have been a student at Leipzig about 1570.

Drusina's own lute collection of 1556 contains four fantasias, 19 French, German and Italian song transcriptions, four passamezzos, three saltarellos, two Italian dance-songs, four paired German dances and five motet transcriptions. He adopted the diminution procedures and echo effects characteristic of Francesco da Milano's school, and his treatment of passing dissonance is interesting.

E. FRED FLINDELL

Druskin, Mikhail Semyonovich (b. Kiev, 14 Jan 1905) Soviet musicologist. He studied under Boris Asaf'yev at the Institute for the History of the Arts in Petrograd/Leningrad, graduating in 1924; in the following year he also graduated from O. K. Kalantarova's piano class at the Leningrad Conservatory. He then studied with Schnabel in Berlin (1930-32) and until 1933 was active as a concert pianist. He has published a large number of writings on piano music, and in 1946 was awarded a doctorate by the Moscow Conservatory for his dissertation on keyboard music from the 16th century to the 18th. He was a research fellow at the Institute for the History of the Arts, now the Leningrad Institute for the Theatre, Music and Cinematography

(1924-47) and was later promoted to senior research fellow (1947-54). In 1935 he joined the teaching staff of the Leningrad Conservatory and in 1947 was appointed professor. While in these posts Druskin has made a substantial contribution to musical education, both in the writing of textbooks on the history of foreign music and in the devising of special music history courses. He has trained a large number of eminent musicologists working both in the USSR and abroad, and he is a regular participant in international conferences.

Družický, Jiří. See DRUSCHETZKY, GEORG.

Druze music.

1. General 2. Social and musical contexts. 3. Performers and instruments 4. Song styles.

1. GENERAL. The Druzes (from the Arabic *al-durūz*) are an Arabic-speaking religious sect whose approximately 300,000 members live in several Near Eastern countries. Almost half live in southern Syria, mostly in the Jabal al-Durūz region. Approximately 110,000 live in Lebanon, in the central region near Mount Lebanon (including the districts of al-Matn and al-Shūf) and on the slopes of Mount Hermon in the south. Only about 3% live in the Kingdom of Jordan. The population of these areas lives mostly in small agrarian villages, which

range in size from 1000 to several thousand people and are inhabited either primarily by Druzes or by combinations of Druzes and members of other religious groups, usually Christians. Druzes can also be found in Beirut and outside the Middle East, particularly in the Americas.

The Druze faith, an offshoot of the Ismā'īlī sect of Islam, originated during the Fatimid dynasty of Egypt (909–1171). The religion began in 1017, when Caliph al-Hākim was publicly proclaimed divine by Druze founders and missionaries, among whom was al-Darazī, from whom the movement took its name. During the 11th century, after the Druze movement had accumulated a substantial number of followers, all conversions to and from the faith were permanently halted and it became a secret sect whose doctrines were strictly barred to non-Druzes; although outlawed in Egypt, it was able to survive for centuries in Syria and Palestine.

Druze theology contains elements shared by Islam, Judaism, Christianity, neo-Platonism and other ancient creeds. The Druzes believe creation results from cosmic emanation that originates in the Creator and proceeds through several stages, which, in turn, are manifested on earth in the human forms of revered faith leaders. They also believe in metempsychosis, the transmigration of the human soul to another Druze after death. Druze sacred writings prescribe seven basic duties: truth, mutual help, the rejection of false worship, the denial of Satan and unbelief, the constant belief in the Creator's unity, the acceptance of acts of God in all circumstances, and yielding to the will of God for better or worse. In addition, a number of moral precepts advocate humility, temperance, decency of action and utterance, the protection of women and resistance to material temptations.

Throughout their history the secrecy of the Druzes' religion has been safeguarded by the practice of *taqiyyah* ('dissimulation'), which required that they imitate the manifest traits of surrounding ethnic groups (including aspects of folklore and religious behaviour) while adhering to their inner convictions. At the same time the survival of the community was dependent on militancy: the Druzes fought valiantly against the Ottomans in the 17th century, the Egyptian army in the 19th century and the French during the 20th century.

The term 'Druze music' does not refer to one musical style but to an assortment of musical practices encountered among the Druze communities, whose musical styles are mostly akin to those of neighbouring ethnic groups; there are, however, a number of elements peculiar to the Druze people. As a result of their geographical distribution their music may be divided ethnomusicologically into three areas: the first includes the styles of the Hawrān region in Syria and the neighbouring beduin culture of the Syrian Desert; the second (including both the central and southern Lebanese groups) has a repertory that blends with the musical traditions of Mt Lebanon; and the third derives from the Arabic musical styles in northern Palestine. Although these areas are musically distinct, there are some unifying elements: important characteristics of Near Eastern folk music permeate all three areas; the areas show exchange in their song repertoires; and, in all three, musical behaviour and attitudes are considerably modelled on the life style prescribed by the Druze religion. Before the mid-20th century little was written about Druze musical life, and references to it were often indirect; most literature concentrates on religion and

social history. George W. Chasseaud (1855) alluded to the women's passionate interest in lamenting and wailing at funerals; William Ewing (1907) briefly described the musical entertainment at a beduin guest house; and Saarisalo produced an elaborate study (1932) that concentrated on Druze song-texts.

2. SOCIAL AND MUSICAL CONTEXTS. The ascetic, conservative and secretive elements of Druze society have several implications for musical life. Sacred music has no visible role in a typical Druze village; in contrast to other Middle Eastern communities, for example the Sufi sects of Islam, the Druzes do not seem to have cultivated any elaborate musical liturgy of their own. The religious music adopted in the past, sung in their *khalwāt* (religious sanctuaries) and at funerals in private, is believed to have been borrowed from two main sources: the Islamic semi-religious tradition, particularly the vocal genre *tawshīh* (under the Ottomans before World War I, the famous *tawshīh* 'Al-Burdah' was most frequently performed by Druzes), and the available folk music of the area. Well-known secular tunes are sung as sacred music after being supplied with new religious texts.

As the role of religious music is so limited, there is a heavy emphasis on secular music. The only people who participate in musical activities on public occasions are the *jūhhāl* ('ignorant'), the non-initiated or laymen. This group forms the majority of the Druze population and is considered too immature and morally ill-equipped to have access to the secrets of the faith yet. In contrast, the *'uqqāl* (religious initiates, both men and women), are stratified into religious ranks, and, while not required to renounce normal living, must abide strictly by the moral dictates of the religion, including abstinence from music and song and other worldly pursuits.

While Druze music is mostly secular in origin and character, it is also sober and restrained. Druze musical traditions retain a highly provincial or folk character and show much less influence from European or even Middle Eastern urban popular music than do the musical traditions of nearby groups. Musical life, like other avenues of the Druze's social life, succumbs to religious controls exerted through the *'uqqāl* group, who are entitled to steer the rest of the community in the proper moral directions. Thus, while it is usual for Druze singers to compose songs on ancient Arabian themes such as warfare and warriors, bravery and chivalry, generosity and nobility, they must observe a standard of sobriety, humility and decency. At a funeral a female dirge singer is instructed not to invoke excessive grief, not to beat herself nor dance while singing and not to sing before male listeners; male and female funeral singers must avoid composing song-texts that attack the fatal destiny of man, as, according to Druze theology, death must be accepted and revered as a manifestation of divine justice.

The Druzes associate their music most frequently with warfare, funerals and weddings. The large repertory inspired by military combat may originally have served a more direct function. Some Druzes maintain that war songs were sung en route to battle by Druze fighters and military leaders; at present, they appear in almost any social context where music is performed. During a funeral, if the deceased was a young man or an eminent political leader, war songs are sung with texts

newly improvised to suit the occasion. War songs have more than one generic name; two common ones are *hawrahah*, from the Arabic *ḥarb* (war), and *ḥidā'* (a term incorporating war songs and some wedding and funeral songs). These are typically performed with the occasional shooting of firearms. Ex.1 is an excerpt from a Syrian Druze *hawrahah* performed in Lebanon by two male choruses in alternation (with hand-clapping marked by x); the key signature used indicates 'quarter-tone flat'. The war mystique permeates most Druze song-texts regardless of the context of performance or the sex of the performer, and seems to influence such facets as the singer's dynamic accentuation and vocal timbre. Non-Druze Lebanese villagers say that Druze vocalists (both male and female) 'sing with *jaysh*' ('army' and 'agitation'), a reference to the masculine and forceful timbre of the singing voice.

(Chor II)

For Druzes the funeral has both musical and social significance. The funeral ceremony, a spectacular manifestation of Druze solidarity, is the most revered public occasion: attending a funeral is a moral duty and an opportunity to learn humility and to pay tribute to the deceased and his family. A wide spectrum of music, mostly vocal, is performed; however, especially in Lebanon, if the deceased was a socially prominent man, the funeral procession may be accompanied by a *nawbah* (civilian brass band), a custom also practised by Christians in the area. The funeral performance is referred to generically as *nadh* (funeral songs), its wide repertoire includes textually modified war songs if the deceased was a young man and wedding songs if a woman. Ex.2 is from a *hidā'* based on a wedding-

related text and performed by a female soloist and chorus during a Druze funeral in Lebanon. However, some songs are performed only during funerals: *nadh* ('dirges', the word here denoting a specific song genre); *tanāwīh* ('wailing songs'); *fraqiyvāt* and *scābā* ('departure songs'); and *rithā'* ('poems of eulogy'). While the *nadh* may be performed by either women or men, *tanāwīh*, *fraqiyvāt* and *scābā* are sung only by women, gathered around the deceased's body in a separate room. *Rithā'* are typically sung by male funeral singers who specialize in *zajal* poetry. Ex.3 is from a *nadh* performed by a female soloist and chorus during a Druze funeral in Lebanon.

(Chorus)

The repertoire associated with weddings is broadly based: many Druze weddings include Lebanese and Egyptian popular songs as well as war songs; other material which technically may not fall within the category 'song' is also used. Although some kinds of wedding song are performed without accompaniment, such as the *shawbashah* and the *tarwīd* (both women's songs sung solo in free rhythm, see ex.4), most wedding songs are accompanied by instruments, dance or hand-clapping. In addition to these two types of song, other features of weddings include the *hidā'* (described above in connection with war songs and funerals) and the *zalghatah*, a four-line recitation followed by ululation

Other genres of music, whose contextual associations are not always clearly prescribed, are heard in a wide variety of settings. Among Lebanese and Israeli Druzes these include the popular Near Eastern *'atāhā wa mījānā* ('*atāhā* is a free-rhythm stanza sung by a soloist, preceded or followed by the *mījānā*, a more strictly metrical choral refrain), the *abū al-zuluf* and the *dal'ūnā*, the texts of all three genres are predominantly amorous. To these may be added textual and melodic formats of the traditional *zajal* repertoire. Some of these genres are performed as work songs or for welcoming important visitors, they are also sung on radio and television. They may be heard during the Druzes' *zīvārah* (annual visit) at the shrine of Shu'ayb in Kafar Hittūn near Tiberias (April 23-5). Ex.5 is from a *dal'ūnā* performed at a Druze wedding in Lebanon by a

male singer and chorus while dancing the *dabkah* to a flute accompaniment; the soloist's material is shown and the chorus would enter at the end of the second bar. Ex.6 shows a wedding song for men's chorus, accompanied by hand-clapping (shown by x); although this

Ex. 6 Syrian Druze wedding song, male chorus, rec and transcr. A. Racy

song was sung at the same wedding in Lebanon as ex 5, it is a Syrian Druze song (in the notation, curved parallel lines indicate portamento)

Among the Syrian Druzes, who have retained beduin traditions, music is an important part of the activities in the *madāfah* (guest house), owned by wealthy or socially influential people; it has been customary for the *shu'arā' al-rabāb* ('fiddle-accompanied poets') to entertain the guests there. These poets' repertory is based on the *shurūqiyāt* song genre, which usually contains texts praising either the host or other Druze social and political leaders (Songs of this genre are also composed to express political protest. Towards the end of the 19th century the Syrian Druze leader and poet Shiblī al-Atrash was exiled by the Ottomans, he subsequently composed *shurūqiyāt* criticizing the tyranny of Ottoman rule and glorifying the attributes of the Druze people. The singing poets of the Jabal al-Duruz area in Syria are known to have sung his compositions for many years.)

3 PERFORMERS AND INSTRUMENTS. As verbal arts are important in the Near East, the poet-musician is highly esteemed. In Syria the *shā'ir al-rabāb* (male fiddler-poet) plays an outstanding musical role, in Lebanon the *qawwāl* ('the one who says', feminine *qawwālah*) specializes in performing *zajal*, traditional colloquial poetry sung before an audience; a poet-musician who specializes in performing at funerals is called *naddāb* ('male funeral singer', feminine *naddābah*). In Druze villages there are normally one or two outstanding male or female poet-singers and one or two male instrumentalists who accompany singers and dancers. Dances, varying in style of performance and sometimes in type of musical accompaniment, include the *raqs* (solo male or female dancing), *hakam* (male sword-duel dance), *dabkah* (a male or female group dance with one line of dancers), and the *jawfivyah*, a male group dance involving two lines of dancers facing each other. It is not customary for Druze vocalists and instrumentalists, despite their usually humble origins, to demand payment for their performances. However, many of them receive contributions of various amounts according to the generosity and wealth of the hosts.

Druzes use the familiar stock of Near Eastern folk instruments. Most widely used is an end-blown flute known as a *minjayah* among Lebanese Druzes and *shabbābah* among Israeli Druzes; it is made from reed or metal pipe and usually has five or six finger-holes. The double clarinet, another popular instrument, is made from reed and found in two forms: the *mijwiz*, which has two identical pipes, is particularly common in

Lebanon; and the *arghūl*, composed of a drone pipe and a chanter, is mostly used among the Israeli Druzes. The *rabābah*, a single-string fiddle with a skin-covered belly, is most popular among the Syrian Druzes and is typically accompanied by a *mihhāj*, a large wooden mortar which serves the dual purpose of coffee grinder and percussion instrument. The *darabukkah*, a single-headed pottery hand drum, is widely used, as is the *daff*, a small tambourine with five sets of cymbals, often played during *zajal* performances.

4 SONG STYLES. The Druze song repertory may be divided into three main categories of musical structure. The first consists of metrical songs (e.g. *hawrahah*, *hidā'* and *nadh*), usually performed responsorially but sometimes antiphonally; the soloist improvises verses of one or two lines each, and the chorus sings a refrain which is often the first line of the verse sung to more or less the same melody. The second category contains songs such as '*atāhā wa mījānā*', which are partly metrical and are performed responsorially: the soloist sings a verse in an elaborate free rhythm, and the chorus responds with a basically metrical refrain. The third category, exemplified by the genres *tanāwīh*, *tarwīd* and *rithā'*, is characterized by a free-rhythm melody marked by frequent long, melismatic passages; this category is performed by one singer, with no choral refrain.

The melodic material is largely dependent on the structure of the texts, which are always in colloquial poetic form. A large number of metrical responsorial songs are based on short melodic patterns that coincide with one hemistich of poetry (e.g. exx. 1, 2 and 3); if the verse is composed of one line of poetry the melodic pattern *AA* would occur. Another group of songs (see the *dal'ūnā*, ex 5) contains melodies that embrace two hemistiches; here the melody comprises two slightly different melodic phrases: *AB*. A third group has longer melodies that correspond to four hemistiches (seen in some *rithā'*); in this case the melodic structure contains combinations of similar and variant phrases, a common form being *AABA*. While other textual and melodic formulae can be found, their relationships are not always well defined.

The melodies usually move by intervals not exceeding a major 2nd (see ex. 3). Wider leaps (3rds, 4ths and 5ths), when used, appear mostly at the beginning of a phrase. The melodies vary considerably in range; many wedding songs performed by women are based on only one or two pitches and stay within the range of a major 2nd, while many *rithā'* songs performed by men encompass more than an octave. Melodic contour is not uniform either; although many Lebanese Druze funeral songs are characterized by descending patterns (see ex. 3), other song types have arched contours (ex. 5) and still others show fluctuating progressions that move around a tonic centre. The patterns of melodic intervals used in the various melodies do not always remain constant; through improvisation they may smoothly undergo significant transformations during a single performance; while repeating a pattern, a performer may gradually expand the melodic range by replacing certain pitches with others higher or lower. The first one or two notes of the melodic pattern are particularly susceptible to replacement; phrase endings are more stable and the tonic, on which the melody ends, is the least likely to

change. Many scales abstracted from the melodies, particularly those from the songs of female performers, do not have exact parallels in the system of *maqāmāt*, making it inappropriate to use conventional Middle Eastern music theory as the only criterion for analysing the Druze repertory. Many male singers, however, such as well-known *zajal* performers influenced by contemporary urban music, do sing in modalities similar to such *maqāmāt* as *siḡāh*, *bayyātī* and *hijāz*.

In the Near East, even within one area, musicians from different villages and ethnic groups usually interpret the same melodic pattern differently. Like other Near Eastern people, Druzes recognize these regional and ethnic differences as well as those between men's and women's songs, and refer to such variable melodic nuance as *lahjah*, a term which also means 'spoken dialect' or 'accent'. Indeed, they do not think of melody and text separately, the term for singing poetry is *qawī* ('saying'). Accentuating certain words and pausing abruptly to enhance the meaning of the text are both common features; the singer may also use rhythmic variation, breaking a text into smaller components to fit the syllables of the text.

ALI JIHAD RAC Y

Dryden, John (b. Aldwinkle, Northants., 9 Aug. 1631, d. London, 1 May 1700). English poet and dramatist. After obtaining his degree at Cambridge in 1654 he settled in London. He was appointed poet laureate and historiographer royal in 1668; in the same year he became a shareholder of the Theatre Royal, though he relinquished his share ten years later. In 1685 he became a Catholic and consequently lost the posts of poet laureate and historiographer royal after the accession of William and Mary in 1689.

The printed text of Dryden's *The State of Innocence* – an adaptation, published in 1677, of Milton's *Paradise Lost* – calls it an opera, but the part intended to be played by music is slight, and the work was never actually performed. In 1684, however, Dryden started work on a genuine semi-opera, *King Arthur*, which he originally designed to have an allegorical sung prologue in the French manner, extolling Charles II and his brother James. For some reason he later expanded this prologue into a full-length, all-sung independent opera called *Albion and Albanus*, which was set by Louis Grabu. It was rehearsed in the winter of 1684-5, but before it could be publicly performed the king died. It was finally produced in June 1685 but was a disastrous failure, partly for political reasons, but largely because of the inapt music. *King Arthur* itself was put aside until the success of the semi-opera *Dioclesian* in 1690 made Dryden aware of Purcell's potential. He then asked Purcell to provide music for his play *Amphitryon* and subsequently for a revised *King Arthur*. The latter was successfully staged in June 1691. About the same time

Dryden also wrote the dedication of Purcell's *Dioclesian* for him.

Although music was peripheral to Dryden's main interests, the prefaces to *Albion and Albanus* and *King Arthur* show that he thought deeply about the form of opera and about the problems of writing words for setting to music. In confining 'the songish part' to supernatural characters or 'meaner persons' and accepting that operatic plots admit 'of that sort of marvellous and surprising conduct, which is rejected in other plays' Dryden was summing up the contemporary English attitude to dramatic music. Within these limitations he managed very successfully in *King Arthur* to integrate the musical sections into the plot; *Albion and Albanus*, however, is little more than an allegorical tableau. His concern for direct language, varied rhythms and the actual sound of words shows a real understanding of the needs of music, though his excessive imitation of Italian verse, particularly in the use of feminine rhymes, sometimes gives the lyrics a stilted effect.

Dryden's use of verbal sounds and rhythms to convey meaning was most strikingly displayed in his two St Cecilia odes. *Song for St Cecilia's Day* (set by G. B. Draghi, 1687) and *Alexander's Feast* (set by Jeremiah Clarke in 1697 and later by Handel). He also provided the text for Blow's *Ode on the Death of Henry Purcell* (1695). His last work, *The Secular Masque*, for inclusion in Vanbrugh's *The Pilgrim*, was also a musical one and was set by Daniel Purcell.

MARGARET LAURIE

Dryfield, Robert. English musician, possibly identifiable with DRIFFELDF.

Drysdale, (George John) Learmont (b. Edinburgh, 3 Oct. 1866, d. Edinburgh, 18 June 1909). Scottish composer. He began to study music at an early age; his first post as organist was at Greenside Parish Church, Edinburgh, in 1885. In the following year he gave organ recitals at the International Exhibition, Edinburgh. Anxious to obtain fuller training, he took the post of sub-organist at All Saints Church, Kensington, which enabled him to attend the RAM (1887-92); there he studied composition under Frederick Corder and the piano under Wilhelm Kuhe, winning the Charles Lucas Medal. Not until 1904 did he return to work in Scotland, as teacher of harmony and composition in the Athenaeum School of Music, Glasgow (now the RSAM), but he resigned after one year to devote himself to composition.

While Drysdale was still a student, several of his orchestral works had been publicly performed and had won high praise from teachers and critics. The first was a ballade, *The Spirit of the Glen* (St James's Hall,

London, 1889); this was followed by the prelude to a cantata *Thomas the Rhymer* (1890), also at St James's Hall, and the *Overture to a Comedy* (1890), soon renamed *Through the Sound of Raasay*. In the same year Drysdale won the Glasgow Society of Musicians' prize with the spirited overture *Tam o' Shanter*, which was performed at the Crystal Palace Concerts and is today his best-known work.

There followed in rapid succession several fine orchestral and vocal works, and in 1896 the striking mystical play *The Plague*, in which speech and music were synchronized: this was produced in Edinburgh by Sir James Forbes Robertson. Two years later Drysdale's strong dramatic bent found full expression in an opera *The Red Spider*, based on themes of Devon folklore. The work toured from Plymouth to Aberdeen, receiving its 100th performance at Dundee with much acclaim. *A Border Romance*, an orchestral poem, was requested by Henry Wood for performance at Queen's Hall, London (1904). The cantata *Tamlane* (1905) had a splendid companion in the incidental music to *Hippolytus* (Gilbert Murray's translation). It was while still at work scoring the opera *Fionn and Tera* that Drysdale died of pneumonia. Another young Scottish composer, David Stephen, undertook to complete the scoring, and Oscar Hammerstein planned to produce it at the London Opera House, but with the enterprise's collapse after one season, the plan was shelved.

Drysdale's music is far more Scottish idiomatically than Mackenzie's or MacCunn's; he may be regarded as 'the Scottish Grieg'.

WORKS

(mostly MS, at GB-Gu, see detailed list in MGG)

- Theatrical works: *The Plague* (play, 1 act), Edinburgh, Oct 1896, 1 the Red Spider (opera, 3, S Baring-Gould), perf 1898, 3 songs publ, Hippolytus (incidental music, 2, G Murray, after Euripides), Glasgow, 1905, Fionn and Tera (opera, 2, Duke of Argyll), 1909, not perf; 6 others, incl 3 unfinished
- Cantatas, all with orch: *Thomas the Rhymer*, solo vv, chorus, 1889, unfinished; *Ode to Edinburgh* (Burns), Bar, chorus, 1890, *The Lay of Thora* (G Bantock), S, 1892 *The Kelpie of Corneveckan* (C Mackay), solo vv, chorus, vocal score (London, 1897), *Tamlane* (Drysdale), chorus, vocal score (London, c1905), 3 others
- 11 orch works, incl *The Spirit of the Glen*, 1889, *Ov to a Comedy* [Through the Sound of Raasay], 1890, *Tam o' Shanter*, ov (London, 1921), *Herondean*, ov, 1893, *A Border Romance*, tone poem, 1904

3 church works, 4 chamber works, 14 pf pieces

7 partsongs, over 60 songs, to texts of Bantock, Burns, E Doune, Longfellow, Kingsley, Moore and others, numerous folksong arrs

JEAN MARY ALLAN

Drževsky, Jiří. See DRUSCHETZKY, GEORG.

Drzewiecki, Zbigniew (b Warsaw, 8 April 1890; d Warsaw, 11 April 1971). Polish pianist, teacher and administrator. He studied the piano at the Vienna Academy of Music (1909-11), later becoming a private pupil of Maria Prentner (1911-15) and Paderewski (1928). His début at the Warsaw Philharmonic (1916) was followed by a distinguished concert career; he played throughout Europe, concentrating on contemporary works, especially those of young Polish composers. Concurrently he taught at the Warsaw Academy of Music (1916-44, 1945-68, pro-rector 1930, rector

1931) and at Lwów Conservatory (1930-40); he also founded (1945) the Kraków College of Music, where he taught until 1968 and served as rector (1945-50). Drzewiecki was a leading figure of Polish musical life and an outstanding teacher whose many notable pupils included Czerny-Stefańska, Ekier, Harasiewicz and Fou Ts'ong. He served as chairman of the Polish ISCM (1934, 1948) and of the Warsaw Chopin Society (1959-66), acting as jury member and chairman of its piano competition (1927-65); he also adjudicated at numerous foreign competitions. His many honours included degrees of the Sibelius Academy, Helsinki (1939), the Royal Academy of Music, London (1948), and Tokyo University (1966).

D sol re. The pitch *d* in the HEXACHORD system.

Dualism (Ger. *Dualismus*). A theory of tonality that views major and minor as diametrically opposite one another by arguing that the harmonic centre of a major triad is its root, that of a minor triad its 5th. Dualistic theory, whose origins go back to Moritz Hauptmann, was developed mainly by Arthur von Oettingen, who observed that the notes of a major triad, considered as overtones, were derived from a common fundamental, and that contrarily there existed a note that belonged to the overtone series of all three notes of a minor triad; this amounts to saying that the major triad, when inverted about its root (or 5th), produces a minor triad. Since Oettingen, the concept of dualism has remained partly in the theory of tonality, partly in the study of acoustics and perception.

Dub [dubb]. An obsolete term for a type of tabor; see DRUM, §3, and PIPE AND TABOR.

Du Bellay, Joachim (b Lire, Anjou, 1522; d Paris, 11 Jan 1560). French poet. After studying law at Poitiers, he joined Ronsard and Baif at the Collège de Coqueret under Jean Dorat. A brilliant classicist, he showed his familiarity with the works of Horace, Ovid and the neo-Latin poets in both his French and his Latin verse. In 1549 he published *La deffense et illustration de la langue françoise*, which argued that the French language was capable of producing fine literature if it rejected its medieval past and assimilated classical and Tuscan models. His *L'olive* (1549) was the first substantial collection of French sonnets, most of them imitating Petrarchan models; a few odes and lighter pieces were published at the same time. He spent the years 1553-7

in Rome in the service of his cousin, Cardinal Jean du Bellay (1492–1560), the patron of Rabelais. He recorded his impressions of the city and his homesickness in two more sonnet collections, *Les antiquitez de Rome* and *Les regrets*. The *Poemata* and the *Jeux rustiques*, a bucolic collection, were published in 1558. During the last three years of his life he lodged at Paris with the Angevin priest and singer Claude de Bize, a canon at Notre Dame Cathedral. Du Bellay's *Oeuvres* were published posthumously in 1568 and English translations by Spenser and others appeared soon after.

Like Ronsard, Du Bellay suffered increasingly from deafness, and music plays a less important role in his poetry than the visual arts. However, like his contemporaries he favoured the close alliance of verse and music and exploited all the usual lyrical metaphors such as the lyre, the lute, the Orpheus myth and the nightingale. The *Deffense* rejects the old lyric forms (rondeau, ballade, virelai, chanson) and even the *épigramme* of Marot in favour of the neo-classical ode 'd'un Luc bien accordé au son de la lyre Grecque ou Romaine', and recognizes the musical advantages of alternating masculine and feminine rhythm and regular strophic construction. However, Du Bellay did not observe either feature as religiously as Marot or Ronsard. Apart from his friend de Bize, no practising musicians are extolled in his poetry, although he must have been familiar with the performers of Jean du Bellay's retinue at Rome and with members of the Notre Dame choir Arcadelt, who moved from Rome to Paris in the early 1550s, set nine of his poems and shared his enthusiasm for Horace and Martial. Two other contemporary musicians, Janequin and Gentian, each set one of his poems, and a few of his pieces were set by later Ronsard enthusiasts including Lassus, Verdonck, Le Blanc and Pevernage.

FRANK DOBBINS

Düben. Swedish family of musicians of German (not, as has sometimes been stated, Bohemian) origin. For three generations in the 17th and 18th centuries they occupied central musical positions. Their ancestors seem to have come from the Leipzig district, where some of them were musicians. (1) Andreas founded the Swedish branch of the family in 1620, and in 1625 his younger brother Martin moved to Sweden to take up an appointment as organist; other members of the family followed soon afterwards. The most prominent musician in the next generation was (2) Gustaf (i). His son Gustaf von Düben (ii) (b Stockholm, baptized 5 May 1660 [not b 6 Aug 1659, as has usually been said]; d Stockholm, 5 Dec 1726) gained court positions early in life in the entourage of the crown prince, later Charles XII, whom he followed into battle. He was raised to the ranks of the nobility in 1698, was later granted the title of baron and finally reached the position of Master of the Royal Household. However, he had also received a sound musical education and succeeded his father as conductor of the court orchestra in 1691, a post that in 1698 he handed on to his younger brother (3) Anders (ii), the last

active musician of the family. Although his nephews Carl Gustaf (1700–58) and Carl Wilhelm von Düben (1724–90) were connected with the court orchestra between 1741 and 1758, and 1758 and 1764 respectively, they merely held positions as executive directors.

(1) **Andreas [Anders (i)] Düben** (b Leipzig, or Wurzen, nr Leipzig, c1597 [not c1590 as has been stated]; d Stockholm, 7 July 1662). Organist and composer. When still under 13 years of age he and his brother were admitted to Leipzig University in 1609. He was a pupil of Sweelinck in Amsterdam from 1614 to 1620. In the latter year he became second organist of the new Swedish court orchestra at Stockholm engaged from Germany for the wedding of Gustav II Adolf. He very soon reached a prominent position among the court musicians and was appointed conductor in 1640. Alongside his court service he became organist of two Stockholm churches, the German Church in 1625 and the Town Church (Storkyrkan) from 1649 or 1650. Two of his official choral compositions survive: *Pugna triumphalis*, written for the funeral of Gustav II Adolf in 1634 (Stockholm, 1634; edn., Stockholm, 1932) and *Miserere*, written for the funeral of Charles X Gustav (S-Uu; edn., Slite, 1971); the latter has sometimes been incorrectly ascribed to (2) Gustaf (i). Some 20 four- and five-part instrumental dances composed for the court orchestra are also extant (S-Uu; edn., MMS, viii, 1973), and there are a few organ works too (edns. in H. J. Moser and T. Fedtke, eds., *Allein Gott in der Höh' sei Ehr 20 Choralvariationen der deutschen Sweelinck-Schule*, Kassel, 1953, and H. J. Moser, ed *Choralbearbeitungen und freie Orgelstücke der deutschen Sweelinck-Schule*, Kassel, 1954–5).

(2) **Gustaf Düben (i)** (b Stockholm, c1628 [not 1624, as has been said]; d Stockholm, 19 Dec 1690). Collector of music, organist, musician and composer; son of (1) Andreas Düben. He completed his musical education in Germany between 1645 and probably 1647. He became a member of the Swedish court orchestra in Stockholm in 1648 and inherited his father's main positions as its conductor and as organist of the German Church in 1663. Most of his works are continuo songs, nearly all are in MSS at S-Uu, but there is also the printed collection *Odae sveticæ* to poems by Samuel Columbus (Stockholm, 1674), a number of his songs were occasional pieces. His few choral works (in MSS at S-Uu) are mainly for up to four voices, four or five instruments and continuo. Examples are *Veni Sancte Spiritus* (1650 or 1651; edn., MMS, v, 1968), *Fader vår* ('The Lord's Prayer', 1663) and *Surrexit Pastor Bonus* (1664). There are also a few instrumental pieces (edn. of three dances, Stockholm, 1940) and a keyboard prelude and suite (in MS at S-SK).

Gustaf Düben is particularly important for his activities as a collector. The Düben Collection, given to the University of Uppsala by his son in 1732, was essentially compiled by him. Its main part consists of 1500 vocal works in MS: 1200 are by 200 known composers and 300 are anonymous. There are also over 300 instrumental works in MS and some printed music. The collection, which includes many unique works, is one of the richest from the second half of the 17th century. The best-represented composers of vocal music are J. P. Krieger, Du Mont, Erben, Peranda, Georg Arnold, Pohle, Bernhard, Vincenzo Albrici, Carissimi (all with 16 or more works), Kaspar Förster (39 works).

Geist (59), Capricornus (65), Pflieger (96) and Buxtehude (105). It is not known exactly how Düben acquired this vast amount of material, but it is evident that a great part of the collection consists of copies which were made by him and by other musicians working in Stockholm. A number of autographs by foreign composers testify to his good international contacts; an example is Buxtehude's autograph of his cantata cycle *Membra Jesu nostri*, with a dedication to Düben. For all the vocal works he seems to have intended to include sets of parts as well as versions in tablature collected in bound volumes; of this collection within the collection he completed five volumes entitled *Motetti e concerti*, which are dated 1663-7.

(3) **Anders von Düben** (ii) (b Stockholm, 28 Aug 1673; d Stockholm, 23 Aug 1738). Musician and composer; youngest son of (2) Gustaf (i). He became a treble at the court in 1686 and an instrumentalist in the court orchestra in 1689. He took over as its conductor from his brother Gustaf von Düben (ii) in 1698 but resigned the musical direction in 1713 and retired completely in 1726 to devote himself to other court duties. He was raised to the ranks of the nobility in 1707, became a chamberlain in 1711, was granted the title of baron in 1719 and finally became Master of the Royal Household in 1721: his career was thus very similar to that of Gustaf (ii). He completed his musical studies on journeys abroad, and during his period as conductor of the court orchestra French influence became noticeable. His relatively few compositions include a ballet (short score, Stockholm, 1701; excerpts in Norlind, 1899-1900) and occasional works for the court (MSS at S-U). In 1727 he promised to give his father's collection of music, including a few additions made by himself, to Uppsala, and (as mentioned under (2) Gustaf (ii)), he presented it in 1732, in the following year it arrived at the University Library.

Du Billon, Jhan. See BILLON, JHAN DE.

Dublin. Capital of the Republic of Ireland (Eire).

1. History. 2. Church music. 3. Opera and theatre music. 4. Concert halls. 5. Orchestral and chamber music. 6. Choral music. 7. Concert

promotion. 8. Competitive festivals. 9. Broadcasting. 10. Education. 11. Cultural and promotional bodies, professional associations. 12. Music collections.

1. **HISTORY.** Before the passing of the Act of Union in 1800, Dublin was the seat of government of a country which had for centuries been under foreign domination. Insulated by political and religious barriers from the native culture of the country as a whole, its musical activity was cultivated by the sophisticated ruling class and acted as a local focus for the mainstream of European art music, mainly as reflected by English taste. Except insofar as this activity was in turn imitated by the larger provincial centres of jurisdiction such as Cork, Limerick and Waterford, there was even less contact with the musical life of the majority of the population than in the case of the capital cities of comparable nations.

Owing to the frequent periods of strife and turmoil from which Ireland suffered before the more settled times of the 18th century, musical activity was limited; and much of the material upon which a more accurate and complete picture of musical life in Dublin might be reconstructed has been destroyed. Information for the period before the Cromwellian rebellion centres mostly on the cathedrals. A choir was established at St Patrick's in 1431, and two noted madrigal composers were organists of Christ Church: John Farmer and Thomas Bateson. That the vicars-choral of the cathedrals formed a group of expert singers whose influence spread outside the confines of church music is suggested by an entry in the chapter book of Christ Church Cathedral in 1662-3 admonishing them for having sung among the stage players in the playhouse, and by their foundation of the Hibernian Catch Club about 1680.

The custom of engaging instrumentalists to provide ceremonial music for the city appears to have spread from England in the late 15th century. The first theatre opened was in Werburgh Street, erected by John Ogilby after he was appointed Master of the Revels in Ireland in 1638. Nothing definite is known about music at this theatre, which closed at the rebellion in 1641. After the Restoration Ogilby was reappointed, with a monopoly of theatrical interests in Ireland. He returned to Dublin and erected the theatre in Smock Alley which became the chief centre for drama, music and opera until its closure in 1787.

After the wars of the 1690s the city settled down to a period in which the elegance and idle affluence associated with a colonial governing class formed the ideal background for the cultivation of the arts. As the second city in the British Isles, Dublin entered upon a 'golden age' and attracted musicians of European fame. Cousser, Geminiani, Dubourg, Michael Arne and Tommaso Giordani made Dublin their home; and Handel, T. A. Arne, Pasquali, Castrucci, J. F. Lampe, Pinto, Tenducci and many others paid extended visits. The remarkable extent of musical activity in the middle of the 18th century can be deduced from an analysis of advertised events in the 1749-50 season, which reveals nearly three dozen performances of 16 oratorios, 59 of operas or musical plays and a wide range of instrumental music. The Smock Alley theatre met rivalry first from the Aungier Street theatre, which was opened in 1734 and offered a more capacious stage. It fell into disuse, largely because of poor acoustics, about 1750. Rivalry then passed mainly to Crow Street which was rebuilt as a theatre in 1758, having been a concert hall

The Great Musick Hall in Fishamble Street engraving from Walter's 'Hibernian Magazine' (March 1794)

since it was erected at the request of the 'Musical Academy for the practice of Italian Musick' in 1731.

The Crow Street theatre closed in 1820, when stage music became the monopoly of the Theatre Royal in Hawkins Street (1821-80). The chief venues for oratorio and concert performances were the Crow Street Musick Hall (1731-57) and Mr Neale's Great Musick Hall in Fishamble Street (see illustration), which was opened just before Handel arrived in the autumn of 1741, and accommodated 700 people (without swords or skirt-hoops) for the first performance of *Messiah* on 13 April 1742. With the building of the Rotunda in 1764, the popularity of Neale's Hall gradually declined, it was turned into a theatre in 1777 and closed at the end of the century. The Philharmonic Room, also in Fishamble Street (used by the Philharmonic Society of the 1740s), has been confused with Neale's.

Apart from the commercial theatres, music in 18th-century Dublin was mainly promoted by numerous charitable musical societies which displayed a confusing inconsistency of nomenclature. Chief among them were Mercer's Hospital, the Charitable Musical Society for the Relief of Imprisoned Debtors, and the Charitable Infirmary, all three of which benefited from the first performance of Handel's *Messiah*. In the second half of the century Lord Mornington's Musical Academy (1757-77) and the Irish Musical Fund Society (instituted 1787 and incorporated 1794) were notably active.

As in England, the public looked mainly to foreigners for their music, but the active patronage of the nobility and gentry led to a certain amount of creative activity on the part of local composers such as the Roseingrave family and the Earl of Mornington, who was appointed to the new chair of music in the University of Dublin in 1764. In February 1792 John Field first appeared in

public and published his first known composition. Also active at the close of the century were Philip Cogan and John Stevenson, who provided accompaniments for Thomas Moore's *Irish Melodies*.

With the passing of the Act of Union in 1800, and the abolition of the Irish Parliament, Dublin music lost much of its wealthy patronage. A tradition had however been established, and although opportunities for professionals decreased with the coming of a new era of amateur music-making, there was sufficient activity to maintain 19 publishers and music sellers, and 42 instrument makers in 1820-25.

The notable spread of amateur music was furthered chiefly by the efforts of the Robinson family. Francis Robinson formed a choral society known as The Sons of Handel in 1810, and his son Joseph founded the Antient Concerts Society (1834-63) which built the Antient Concert Rooms (now a cinema) in Great Brunswick Street (now Pearse Street) for its performances. In 1831, William and Henry Hudson, a barrister and a dentist, organized the Dublin Music Festival at which a chorus of 172 and an orchestra of 74, strengthened by London players, was conducted by Sir George Smart and Ferdinand Ries; the chief attraction as soloist was Paganini. At the International Exhibition of 1853, Joseph Robinson assembled a choir and orchestra of no fewer than 1000 performers; and in 1856 Beethoven's Choral Symphony had its first Irish performance by the Philharmonic Society (1826-78), which also acted as host to both Joachim and Rubinstein when they first appeared in Dublin. In 1875 Joseph Robinson founded the Dublin Musical Society, which performed the current choral and orchestral repertory with a choir and orchestra of about 350 in the Concert Hall at Earlsfort Terrace (built for the Exhibition of 1865 and now incorporated in the buildings of University College). Among

the composers of this period were Dr John Smith, Master of the King's Band of State Musicians in Ireland, composer to the Chapel Royal, and professor of music in the University of Dublin (1845–61), who wrote mainly church music and edited Weyman's *Melodia sacra*; and John Glover, who wrote three operas. The better-known Irish composers, Balfe and Wallace, lived and worked abroad.

Towards the end of the century the chief figures in the musical life of Dublin were Robert Prescott Stewart, a prolific composer of cathedral music who succeeded John Smith as professor at the University and was organist at both St Patrick's and Christ Church cathedrals; and Michele Esposito, an Italian who was appointed professor of the pianoforte at the Royal Irish Academy of Music in 1882. A composer and much esteemed teacher, Esposito attempted to provide a permanent orchestra for the city by founding the Dublin Orchestral Society in 1899, and with an orchestra of 70 players he continued to conduct the society's concerts, including a series of Sunday concerts in the Antient Concert Rooms, until the outbreak of war in 1914. Among other pre-war societies may be mentioned the Dublin Oratorio Society (1906–14) under Vincent O'Brien, and the Orpheus Choral Society, founded in 1899 by James Culwick, organist of the Chapel Royal.

In the years between the wars orchestral concerts were given for the Royal Dublin Society by John F. Larchet, then professor of music at University College and music director at the Abbey Theatre. In 1927 an attempt was made to revive the Dublin Orchestral Society under the joint conductorship of Esposito and Larchet, but the society did not survive; and in the same year the third society to be known as the Dublin Philharmonic Society was founded by Colonel Fritz Brasc, who had come to Dublin in 1923 as director of the new Army School of Music. This society made its debut with a performance of Beethoven's Choral Symphony to mark the centenary of the composer's death, and continued to give a series of concerts each season with an orchestra of some 75 players, the wind being recruited from the Army School of Music. Choral performances were also given under Turner Huggard until the demise of the society in 1936.

The 1940s saw a remarkable expansion of musical activity, with societies and organizations proliferating. The Dublin String Orchestra, consisting mainly of professional players from the radio orchestra, introduced many contemporary works under Terry O'Connor, and a number of amateur choral and orchestral societies came into being, as well as organizations for the promotion of chamber music. Many were short-lived but others survived to form, in the company of some long-established institutions, the focal points around which this upsurge of activity crystallized into the pattern of Dublin musical life in the 1970s. The founding of the Music Association of Ireland in 1948 did much to coordinate musical policy by bringing together among its members a wide section of representative interests, both professional and amateur, which found influential expression through its elected council. This period was also notable for a marked increase in creative work, encouraged by the broadcasting authorities and the performing groups promoting contemporary Irish music.

2. CHURCH MUSIC. The two Church of Ireland cathedrals of Christ Church and St Patrick are

constituted in the full cathedral foundation, and follow a distinguished musical tradition dating back to the early Middle Ages. A choir school was attached to each (now only St Patrick's); choirmen hold the ancient posts of vicars-choral and lay vicars. The earliest names of vicars-choral at St Patrick's are recorded in 1219, and the first recorded name of an organist at that cathedral was that of William Herbit, who received payment in 1509. The recorded history of choral music at Christ Church does not go back before 1539, when the canons regular of the previous monastery became the members of a new secular foundation modelled on the practice of St Patrick's; though Robert Hayward was appointed organist in 1509. At intervals from the early 17th century until the late 19th the services of one organist were shared by the two cathedrals: the morning service at Christ Church and the evening service at St Patrick's were the more elaborate, at which the organist and principal members of each choir assisted.

The choir of the Roman Catholic pro-cathedral, Marlborough Street, formed in 1902, owes its existence to an endowment of Edward Martyn, and the deed of gift states: 'The music to be sung shall be Gregorian and that of Palestrina or in the Palestrina style'. Vincent O'Brien, first choirmaster of the Palestrina Choir, played a leading part in the musical life of Dublin until his death in 1946, when he was succeeded as organist of the pro-cathedral by his son Oliver O'Brien and later by Gerard Gillen.

3. OPERA AND THEATRE MUSIC. The popularity of opera and musical plays has been a notable aspect of Dublin taste since the early 18th century, and was further strengthened by the English travelling opera companies during the second half of the 19th and the first quarter of the 20th century. Chief events in the early history of opera in Dublin begin with the first Irish production of *The Beggar's Opera* in March 1728 (40 performances by the end of that year). The first performance of Italian opera was not, as has been stated, by Nicolini in 1711, but in the form of burlettas presented at the Smock Alley Theatre by the De Amici company in 1761.

The foremost organization for the production of opera at present is the Dublin Grand Opera Society, which since 1941 has given two seasons annually at the Gaiety Theatre, there being no opera house in the city. The society has its own amateur chorus, and Radio Telefís Éireann (RTE) provides its Symphony Orchestra; the majority of the principal singers are engaged from abroad.

In recent years an attempt has been made to provide operatic experience for Irish singers, and at the same time bring live performances of the less complex operatic masterpieces to the smaller provincial towns, with the formation of Irish National Opera. There are numerous societies devoted to light opera, foremost being the Rathmines and Rathgar Musical Society, founded in 1913.

4. CONCERT HALLS. The capital city of Ireland lacks a suitable concert hall. Public orchestral concerts are given by the RTE SO in the acoustically unsuitable Gaiety Theatre (seating 1075) and in the orchestra's unsatisfactory temporary home, the St Francis Xavier Hall (688). Large-scale oratorio performances have been given in the National Stadium (c2000). The Royal Dublin Society possesses a hall (1200) where it

promotes an annual series of chamber music recitals. Increased use has recently been made of the fine 18th-century Examination Hall in Trinity College and the Baroque Room in the National Gallery (each seating c500).

5. ORCHESTRAL AND CHAMBER MUSIC. From modest beginnings, as a station chamber ensemble in 1926, the broadcasting orchestra was steadily expanded by the 1950s until it assumed the role (though not the name) of Ireland's national orchestra. After 1948 its complement was strengthened by the importation of a number of foreign instrumentalists, and it took the title of the Radio Eireann (now RTE) Symphony Orchestra. A new generation of Irish players is finding employment in its ranks. From 1941 to 1948 the chief conductor was Captain Michael Bowles. After his retirement a number of guest conductors, including Jean Martinon and Hans Schmidt-Isserstedt, were appointed to direct the orchestra until the appointment of Milan Horvat as principal conductor in 1953. He was succeeded by Tibor Paul in 1962, and by Albert Rosen in 1968. Besides giving public orchestral concerts in Dublin (as noted above), which are recorded for broadcasting purposes, the RTE SO repeats a number of these concerts in provincial centres such as Cork and Limerick, and plays for the Dublin Grand Opera Society and the Wexford Festival opera seasons.

A second professional orchestra, the RTE Light (later Concert) Orchestra, of 33 players, was founded in 1948 and gives studio and public concerts of light music and arrangements of Irish music under two RTE staff conductors. An independent professional chamber orchestra conducted by André Prieur and consisting mainly of players from the RTE SO, known as the New Irish Chamber Orchestra, was formed in 1970. The chief amateur orchestra is the Dublin Orchestral Players, founded in 1939 and conducted successively by Havelock Nelson, Brian Boydell and Captain F. O'Callaghan. A second amateur orchestra, the Dublin Symphony Orchestra, has recently been formed under the conductorship of Colin Block.

Apart from the annual series of recitals sponsored since 1886 by the Royal Dublin Society, referred to above, public support for chamber music was meagre until the 1950s, when active groups formed mainly by members of the RTE orchestras and the zeal of such bodies as the Music Association of Ireland created a new enthusiasm. The broadcasting service established a string quartet in 1958 which gives regular recitals in Dublin and elsewhere. Known as the RTE String Quartet, this body has provided encouragement to Irish composers who have written for it. Interest in quartet music is reflected in the notable seasons of recitals sponsored by the St James's Gate Musical Society. Active pursuit of amateur chamber music is encouraged by the Dublin Chamber Music Group, an offshoot of the Music Association of Ireland.

6. CHORAL MUSIC. Of existing bodies the earliest is the Hibernian Catch Club founded c1680 by the vicars-choral of St Patrick's and Christ Church cathedrals. It claims to be the oldest surviving musical society in Europe. Its activities are confined to male-voice singing at monthly dinners.

The University of Dublin Choral Society was founded in 1837, with Joseph Robinson as its first conductor. It performs the masterpieces of the oratorio

repertory at the end of each university term. The corresponding university society, the Music Society of University College, Dublin, was founded in 1917; two choral and orchestral concerts are given each year. Both universities have chamber choirs: the College Singers (Trinity College, University of Dublin) and St Stephen's Singers (University College).

Of the large choirs which give regular performances, in Dublin the earliest is the Culwick Choral Society, a direct descendant of the Orpheus Choral Society referred to above. Recently they have tended to depart from an earlier tradition of a *cappella* partsongs to concentrate on oratorio and other large-scale works. Of more recent origin is Our Lady's Choral Society, formed in 1946 from the combined Roman Catholic church choirs of the archdiocese of Dublin, the first Irish choir to perform in Paris and Rome. Other important choral societies in Dublin are the RTE Choral Society and the St James's Gate Choral Society.

A professional chamber choir of ten voices formed in 1953, the RTE Singers, earned an international reputation under Hans Waldemar Rosen, particularly in contemporary *a cappella* music; and an independent group of ten voices, formed and directed by Brian Boydell and known as the Dowland Consort, specialized in vocal music of the Renaissance (1958-70).

7. CONCERT PROMOTION. In addition to the concerts promoted by the radio organization, the Royal Dublin Society and other bodies already referred to, there are also the events organized by the Music Association of Ireland. Besides providing recitals for members, the association has been responsible for organizing country-wide tours by prominent chamber groups, concerts in schools by young Irish professionals and recitals at which young soloists are given their first opportunity to appear in public. In 1969 the association, with the cooperation of the radio authorities, inaugurated the biennial Dublin Festival of 20th-century music, which features a broad cross-section of the contemporary international repertory in association with works by living Irish composers. Recitals of solo and chamber music are also promoted by the universities and by the cultural services of the German, Italian and French governments.

8. COMPETITIVE FESTIVALS. The chief competitive music festival is the Feis Ceoil, founded in 1897. The Oireachtas, also founded in 1897, is a festival of Gaelic literature and drama, traditional music and fine art. Other important festivals are the Father Matthew Feis founded in 1908, and the Feis Atha Cliath, founded in 1904 for the promotion of Irish music and dancing.

9. BROADCASTING. The Irish broadcasting service, now known as Radio Telefís Éireann, was instituted in 1926. With only one programme on radio and one television channel until 1979 it was difficult to satisfy musical enthusiasts in the face of popular demand and some dependence on commercial sponsorship. Sound broadcasting in 1971 devoted 276 hours to opera, orchestral and chamber music, and talks on musical subjects, and 125 hours to traditional and arranged Irish music. The broadcasting service also maintains the performing groups referred to earlier. Musical policy of the organization is the responsibility of the director and deputy director of music, and the head of light music with two assistant directors. Gerard Victory was appointed director of music in 1967; his predecessors

were Tibor Paul (1962), Fachtna O hAnnracháin (1947), Captain Michael Bowles (1941) and Vincent O'Brien (1926). There is no organization in the television section specifically responsible for music.

10. **EDUCATION.** A chair of music was created in the University of Dublin (Trinity College) in 1764. The first holder was the Earl of Mornington; others include Ebenezer Prout (1894-1910), Percy C. Buck (1910-20), Charles H. Kitson (1920-35) and Brian Boydell (from 1962). The chair at University College was created in 1913, since when four professors have held office: the Rev. H. Bewerunge, Charles H. Kitson, John F. Larchet and Anthony Hughes. Degrees in music are conferred by both universities.

Two endowed institutions and one private school provide courses in practical musicianship. The Royal Irish Academy of Music, founded in 1848 and given royal recognition in 1872, is governed by a board of 24, consisting chiefly of nominees of the subscribers and of Dublin Corporation, and enjoys state support. Local centre examinations are held in Dublin and throughout the country, over 15,000 candidates being examined annually, and three diplomas are granted, namely the FRIAM (*honoris causa* only), LRIAM (performer's or teacher's diploma) and ARIAM (teacher's diploma). Instruction is given to approximately 3000 'pupil-equivalents' (a pupil studying more than one subject is counted more than once). A students' Musical Union has been active since 1906.

The College of Music, founded as the Dublin Municipal School of Music in 1890, is managed by a principal and a vice-principal, and is under the control of the City of Dublin Vocational Education Committee. There are about 1900 students, many of whom are prepared for the diplomas of the Royal Schools of Music. The College also grants its own advanced teacher's diploma (DipDSM). The Read School of Pianoforte Playing, which was founded in 1915 and gave instruction to many distinguished Dublin musicians, is now no longer active, this leaves the Leinster School of Music, founded in 1904, as the only private music school. It holds local centre examinations, and grants the DipLSM. The Army School of Music, established in 1923, trains the officer bandmasters and bandmen for the Irish Army.

The government Department of Education is divided into the primary and secondary branches, each having separate responsibility for musical education in their respective divisions. The primary branch is under a head organizing inspector, assisted by four organizing inspectors of musical instruction; the secondary branch employs a senior and a post-primary inspector.

11 **CULTURAL AND PROMOTIONAL BODIES, PROFESSIONAL ASSOCIATIONS.** The Music Association of Ireland has on numerous occasions made recommendations on behalf of its widely representative membership (nearly 2000) to the government and other public bodies concerning musical policy, often with notable success. Its continued efforts towards the establishment of a concert hall resulted in the government's promise, in 1965, to build the J. F. Kennedy Memorial Hall, a promise not yet fulfilled. This association has also encouraged the formation of other associated groups such as the Dublin Chamber Music Group, the Composers' Group and a movement equivalent to Youth and Music by the name of Ogra Ceoil, which in

1970 formed a national youth orchestra. It also produces a monthly publication, *Counterpoint*, containing a diary of musical events and short articles.

Ceol Chumann na nOg, an organization concerned with providing concerts for schoolchildren, has enjoyed the cooperation of the RTE SO and its staff conductors; children's interest in music has also been fostered by the work of the Dorothy Mayer Foundation.

The Leinster Society of Organists was founded in 1919, and the welfare of professional musicians is looked after by the Irish Federation of Musicians.

The Arts Council of Ireland, set up in 1951, gives financial support for many musical ventures such as productions of the Dublin Grand Opera Society and enterprising performances which societies and promoting bodies could not otherwise afford. It has also granted scholarships in music, and supported the recording of contemporary Irish music. The latter is the result of a joint scheme of the Arts Council, RTE, and another government body, the cultural relations committee of the Department for Foreign Affairs. This committee, in addition to publishing a catalogue of contemporary Irish music, has made copies of works for dissemination abroad and has sponsored foreign tours by Irish artists.

The oldest Dublin musical organization is the Irish Musical Fund, a charitable fund founded in 1787 and incorporated by Act of Parliament in 1794, administered benefit to 20 professional musicians, mainly orchestral players, who are elected to membership.

12 **MUSIC COLLECTIONS.** The chief music collections are those of the library of Trinity College, which includes the Prout Collection and a number of manuscripts, and of the National Library, which includes the Joly Gift and the Plunkett Collection. A number of early manuscripts and rare printed works are also to be found in Marsh's Library and in the library of the Royal Irish Academy of Music. Manuscript collections of Irish folk music are in the libraries of the Royal Irish Academy and Trinity College, in the National Library and in the National Museum, which also houses a noteworthy collection of instruments mostly made by Dublin craftsmen. (See **LIBRARIES; COLLECTIONS, PRIVATE; INSTRUMENTS, COLLECTIONS OF.**) A collection of some 3000 folksongs, in manuscripts and recordings made by the Irish Folklore Commission, is now housed in University College.

Du Bois, Léon (b Brussels, 9 Jan 1859; d Boitsfort, Brussels, 19 Nov 1935). Belgian composer and conductor. After studying at the Brussels Conservatory he won the Belgian Prix de Rome in 1885 with the cantata *Au bois des elfes*. His career as a conductor took him to theatres in Nantes (1889–90) and Liège (1891–2) and to the Théâtre Royal de la Monnaie (1890–91, 1892–7). In 1912 he was elected to the Belgian Royal Academy and succeeded Tinel as director of the Brussels Conservatory, a position he held until 1925. As a composer he was a Wagnerian, but he moved away from this influence in his much freer working of themes. His most successful work was the mimed drama *Le mort*; he wrote three other pieces for the stage and also an Adagio for strings, two marches, a suite for eight horns, three songs and about 20 choral works. An oratorio and a *Poème* for cello and orchestra remained incomplete. Du Bois' music was published by L'Art Belge, Breitkopf & Härtel and Craz.

HENRI VANHULST

Dubois, Philippe (b Soignies, c1575; d Madrid, Dec 1610). South Netherlands composer and singer. He received his early musical education at the collegiate church of St Vincent, Soignies. He was one of 14 boy sopranos aged between seven and 12 who in 1585 were recruited in the Netherlands to serve in the Chapel of Philip II of Spain; his colleagues included Gery de Ghersem, Mathieu Rosmarin (Mateo Romero), Jean Dufon and Jean de Loncin. He arrived in Madrid at the beginning of 1586. He was taught there by Philippe Rogier until his promotion to the rank of *cantor* on 1 December 1593. In 1594 he was invested with a benefice at the chapel 'du corps saint' at Ste Waudru, Mons. After the death of Philip II he continued in the service of Philip III as *cantor* and composer for the rest of his life, following him to Valladolid, where the court resided from 1601 to 1606. The catalogue of the library of King John IV of Portugal, destroyed in the Lisbon earthquake of 1755, records ten pieces by him; seven are settings for six and eight voices of Latin texts and three of French texts for five and eight voices.

PAUL BECQUART

Dubois, Pierre Max (b Graulhet, 1 March 1930). French composer. He studied at the Paris Conservatoire (1949–53) and received his first commission from the RTF as early as 1949. The resulting work, *Impressions foraines*, is one of his most successful; besides being used for broadcasting it was choreographed, and Dubois drew from it an orchestral suite. He won the Prix de Rome in 1955 and the Grand Prix of the city of Paris in 1964; he has held appointments in Paris and Quebec, notably as professor of analysis at the Conservatoire. The main influences on his music have been those of Milhaud, Françaix and Prokofiev.

PAUL GRIFFITHS

Dubois, (François Clément) Théodore (b Rosnay, Marne, 24 Aug 1837; d Paris, 11 June 1924). French composer, teacher and organist. His training was rigorously classical; after early studies with Louis Fanart, choir-master of the cathedral in Rheims, he went to Paris as a student at the Conservatoire. There he studied the piano with Marmontel, the organ with Benoit, harmony with Bazin and fugue and counterpoint under Ambroise Thomas, winning several first prizes and then the Prix de Rome (1861). On his return from Italy, where he met and was given encouragement by Liszt, he devoted himself to teaching. He was appointed *maître de chapelle* of Ste Clotilde and there produced his oratorio *Les sept paroles du Christ* on Good Friday 1867. Leaving this post in 1869, he then served at the Madeleine as *maître de chapelle* until 1877 when he replaced Saint-Saëns as organist. At the same time he taught harmony and composition at the Conservatoire (1871–90), later succeeding Thomas as director (1896–1905).

Unable at first to gain access to the important Parisian musical theatres, he contented himself with producing, at the Théâtre de l'Athénée on 30 April 1873, a modest work, *La Guzla de l'Emir*, set to a libretto previously used by Bizet. In 1878 he shared with B. Godard the prize at the Concours Musical instituted by the city of Paris, and his oratorio *Le paradis perdu* was performed, first at the public expense (27 November 1878) and again on the two following Sundays at the Concerts du Châtelet. He wrote many other works for the stage as well as numerous pieces in nearly every genre. Today his music is largely forgotten with the exception of a few religious pieces which remain in the repertoires of French churches. His theoretical works, however, are still widely used in musical academies; his *Traité d'harmonie théorique et pratique*, *Notes et études d'harmonie* and *Traité de contrepoint et de fugue* have served several generations of student composers.

Dubois may be considered a characteristic representative of the 'classical' school of French musicians at the end of the 19th century. His learned compositions, especially his church music, are in the purest French tradition of Le Sueur and Cherubini although they suffer from a certain coldness. Tiersot (1918) wrote of him: 'His art, which lacks a sense of movement, was more suited to the church or the concert hall than to the stage'; but he praised the composer's genuine human qualities, and cited him as an example of artistic conscience and integrity at a time when musicians were tempted to follow new musical influences.

WORKS

(all published in Paris unless otherwise stated, for fuller list see MGG)

STAGE

La prova di un'opera seria, 1863, unpubd [composed in Rome]
La Guzla de l'Emir (opéra comique, 1, J. Babier and M. Carré), Paris,

- Théâtre de l'Athénée, 30 April 1873 (c1873)
 Le pain bis (opéra comique, 1, A Brunswick and Beauplan), Paris, Opéra-Comique, 26 Feb 1879 (1879)
 La farandole (ballet, 3), Paris, Opéra, 14 Dec 1883 (1884)
 Aben-Hamet (It. opera, 4, L. Detroyat, after Chateaubriand), Paris, Théâtre du Châtelet, 16 Dec 1884 (1884)
 Xavière (dramatic idyll, 3, L. Gallet), Paris, Opéra-Comique, 26 Nov 1895 (1895)
 La fiancée d'abydos, unperf.; Le florentin, unperf.

OTHER VOCAL

- 3 messes brèves; Messe de Requiem, solo vv, chorus, orch, Messe solennelle de Saint-Remi (1900); Messe de la Délivrance, chorus, org (1919)
 71 motets, Credo, 4 male vv, org (1898); Benedictus, T, org, Sanctus, chorus, 2 org (1911), 8 pieces for male vv, 2 pieces for children's choir, 1 with pf acc., Le coureur, 4vv
 5 oratorios incl. Les sept paroles du Christ, solo vv, chorus, orch 1867 (1926), Le paradis perdu (E. Blau, after Milton), solo vv, chorus, orch (1879), Notre-Dame de la mer (L. Gallet) (1897)
 9 scènes incl. Atala, cantata, Prix de Rome, 1861, L'enlèvement de Proserpine (P. Collin), solo vv, chorus, orch (1879), Hylas, solo vv, chorus, orch (1893), Kybèle (Leconte de Lisle) (1906)
 Musiques sur l'eau (1887), Chansons de Marjolite (1887), 72 other songs

INSTRUMENTAL

- 2 orch suites, 1874, 1877, 2 suites d'orchestre sur la farandole, 1884, 1889, 3 symphonies (1908, 1913, 1924), Concerto-capriccioso, pf, orch (1876); Deuxième concerto, pf, orch (1897); Concerto, vn, orch, 3 concert ovs (1865, 1879, 1881); Adonis, sym. poem (1907), Fantasia-Stuck, vc, orch; misc. other sym works
 2 str qts (1908, 1924), Duetto, str qnt, wind qnt (1909), Nonetto, fl, ob, cl, bn, str qnt (1926); 14 other chamber works
 88 pieces for org
 Poèmes virgiliens (1898), Sonata (1908), other works for pf incl. transcr. of Bach's 48, pf 4 hands (1914)

PEDAGOGICAL WORKS

- 6 textbooks incl. Notes et études d'harmonie pour servir de supplément au traité de H. Reber (1889), 87 leçons d'harmonie (1891), Traité de contrepoint et de fugue (1901), Leçons de solfège (1905), Traité d'harmonie théorique et pratique (1921)

 JEAN MONGRÉDIEN

Dubos, Abbé Jean-Baptiste (b Beauvais, Dec 1670, d Paris, 23 March 1742). French diplomat, antiquarian, historian and theorist of the arts. After studies in theology and archaeology at the Sorbonne, Dubos entered the diplomatic service which took him, at one time or another, to Hamburg, London, The Hague, Brussels, Neuchâtel and Italy, and involved him in the preparations for the treaties of Ryswick and Utrecht. As reward, he was given various ecclesiastical benefices and the title 'Abbé', as well as election to the Académie Française in 1720, of which, three years later, he became 'perpetual secretary'. His historical writings were both well founded and controversial. Because of his broad acquaintance with the arts, past and present and also French and foreign, which was matched by a certain refined connoisseurship, he was in demand, even as a young man, for advice concerning scenery, costumes and staging at the Opéra; and his cleverly formulated critical judgments and theoretical discourses on all the arts made him the oracle of the salons as well as an important forerunner of later 18th-century non-moralistic subjective aesthetics. His most important publication for music is his *Réflexions critiques sur la poésie, la peinture et la musique* (Paris, 1719, 6/1755/R1970; Eng. trans., 1748).

The Abbé's own busy existence would seem to have influenced his aesthetic theories. Thus, he argued, man

loves what is beautiful because by instinct he strives to be always in motion in order to banish *ennui*, an evil he feels so painfully that 'he undertakes often the most laborious tasks simply in order to spare himself the pain of being troubled by it'. To the extent, then, that the arts banish boredom they can be said to be morally good, though this 'goodness' has little or nothing to do with any specifically moral content. Our spirits are forever in need of stimulation and change, even unpleasant stimuli like grief or pain. The aim of the arts is not so much to provide food for the imagination as it is to give pleasure to the soul by spurring it to action, such action being a 'biological virtue' and a necessity for man. So far Dubos was still more or less Aristotelian. But he was also scientific in a way typical of his time, holding that man's primary characteristic is to be in motion, that boredom is equivalent to stagnation and non-living, that our own primary instincts plunge us into passionate expressions and reactions (what we mean today by 'outlets' and 'releases') which, unchecked, culminate in excitement and danger, something Dubos viewed as too much of a good thing. We are protected from that latter menace, however, and cured of its consequences by the pleasurable experience of art (a process rather like Freud's 'sublimation'). Since motion-emotion is the aim, the subject and the manner in which it is expressed (aside from mere technical skill) are important for the reason that art copies the experience of reality, though of necessity in much weaker form: which is why art must strive to be 'natural' without going so far as to fall into illusionism which would make us lose our heads and give way to dangerous agitations rather than simply enjoy the 'passions artificielles' that art should arouse in us.

Because art is natural, the expert is a less reliable judge than the public (restricted by Dubos to the educated and cultivated, the 'honnêtes hommes') since they judge by sentiment without interposing intellectual barriers. Music and painting are, in consequence, 'better' arts than poetry, which must make do with signs referring to arbitrarily designated meanings. Painting places directly before our eyes the 'natural' images by which we are to be pleasurably moved. Music uses only the 'natural' means of tones and therefore works most directly on the heart (a notion certainly indebted to Descartes's physiological musical aesthetics) because it incorporates in itself, as it were, the passions it expresses. But this is not a mere physiological process. Music does not do, it imitates, and the object of its imitation is nature. The imitation may be of a low order, a servile copy of external sound sources (birdsong, streams, storms), or of a higher order in which the composer selects from nature (and here Dubos largely meant human nature) the objects and characters to be imitated. The principle by which the selection is to be made is, of course, that central stumbling-block of all 18th-century aesthetics: taste, the sixth sense that every connoisseur possesses and, indeed, every human (of the cultured classes, be it understood). Dubos's solution involves the other stumbling-block: genius, and here, in a premonition of Mme de Stael, Stendhal and Taine, he found that time and place, climate and epoch, have much to do with producing or inhibiting the natural flowering of genius. Only thus could he explain the prodigious achievements of the arts in his own time in France.

ROBERT ERICH WOLF

Du Bosc, (Guillaume) Simon (b Rouen; d Geneva, 1556-7). French music printer. A Simon Du Bosc, possibly identifiable with the music printer, though called a Parisian, first printed at Alençon between 1529 and 1534. He seems to have been in Paris before that time and was also there in 1534; at the end of that year he was listed as a heretic. Guillaume Simon Du Bosc appears in Geneva, where a heretic would reasonably have gone, in 1553; in that year or the next he was joined by GUILLAUME GUÉROULT, a relative, in partnership. Between that year and 1556, when Guéroult appears to have left for Lyons, they printed at least 12 volumes of music, some of which are lost; they include collections of motets by Clemens non Papa, Crequillon, Gombert, Goudimel, Sermisy and others, and a book of psalm settings. Du Bosc also printed on his own account, though not music. It has been suggested that he was the printer, while Guéroult acted as the financial partner and, probably, music editor.

 STANLEY BOORMAN

Dubourg, Matthew (b London, 1703; d London, 3 July 1767). English violinist and musical director. He was the natural son of Isaacs, a dancing-master. As a pupil of Geminiani, he soon made a name as a remarkably gifted boy violinist, first appearing at one of Thomas Britton's concerts, where, standing on a high stool, he played a solo by Corelli with great success. On 27 May 1714 he had a benefit concert at Hickford's Room. In 1724 he visited Dublin, and on 17 June 1727 married Frances Gates at Stanmore, Middlesex.

In 1728 he was appointed to succeed J. S. Kusser as Master and Composer of State Music in Ireland, a post said to have been intended for Geminiani but transferred to Dubourg for religious reasons. From then until 1752, when he succeeded Festing as leader of the King's Band in London, he spent most of his time in Dublin, where he was an active influence in the musical community, though occasionally travelling to London (he took part, for instance, in performances of Handel's *Samson* there

in March 1743). In Dublin he played a prominent part in most of the important performances of this period, playing at the first benefit for Mercer's Hospital on 8 April 1736, supervising and leading the enlarged orchestra for the first Irish performance of Arne's *Comus* in August 1741, and leading the band during Handel's visit (1741-2), which included the first performance of *Messiah*. The high standard of string playing in Dublin, which was remarked upon by Handel in a letter to Jennens, was undoubtedly due to the influence of Dubourg and his teacher Geminiani. Dubourg subsequently organized a series of six Handel oratorios in the 1743-4 season and the first Irish performances of *Samson* (4 February 1748) and *Judas Maccabaeus* (11 February 1748). He also conducted numerous performances of *Messiah* and other Handel oratorios.

He appears to have been a brilliant performer and fond of showing off his skill. Burney related that on one occasion he introduced a cadenza of extraordinary length into the ritornello of an air. When at last he finished, Handel, who was conducting, exclaimed 'Welcome home, Mr Dubourg' (*An Account of the Musical Performances... in Commemoration of Handel* (London, 1785), 'Sketch of the Life of Handel', p. 27).

In January 1748 there was a sale of furniture and paintings at his house in Dublin, and in March he was bequeathed £200 a year by 'the Widow Barry'. In 1761 he was appointed Master of Her Majesty's Band of Music in London at £200 a year. He retained a house in Dublin, where he often entertained Geminiani, who died there in 1762. Dubourg finally left Ireland in 1765. He was buried in Paddington churchyard.

Dubourg's compositions were mainly ephemeral: those that were published are scattered through minor collections 'Serenading Trumpet Tunes' and Minuets for His Majesty's Birthday are included in collections published by Walsh of London, and John Simpson's *Delightful Pocket Companion for the German Flute* (c.1746-7) contains pieces by him. Of particular interest, as one of the earliest documented examples of an Irish traditional melody which attained great popularity at 18th-century Dublin concerts, is the publication by W. Manwaring in 1746 of *Select Minuets to which is added Eileen a Roon by Mr Dubourgh, set to the harp-chord, with his variations*.

BRIAN BOYDELL

Dubreuil, Jean (b Paris, c.1710, d Paris, 1775). French *maître de clavecin*. He was a student of Jacques de Bournonville and a friend of the theorist P.-J. Roussier. He is known principally for two publications: *Dictionnaire lyrique portatif, ou Choix des plus jolies ariettes* (Paris, 1766, 2/1771 with supplement), a large collection of then-current French and Italian *airs*, all presented with French text in one part with an occasional *duo*, intended primarily for use by musical amateurs and as a teaching aid, and *Manuel harmonique, ou Tableau des accords pratiques* (Paris, 1767), a simplified, practical handbook for learning the principles of harmony primarily at the keyboard, based upon the teachings of Rameau. Although he is known to have composed music, only two minuets appended to his *Manuel* appear to have survived.

ALBERT COHEN

Dubrovnik (It. Ragusa). City in Yugoslavia on the Adriatic coast. It succeeded in freeing itself from Venetian domination in the 14th century and existed as an independent aristocratic republic until 1808, when it was conquered by Napoleon. After the Napoleonic wars it was incorporated into the Austro-Hungarian Empire. Its long independence and prosperity ensured the continuity of artistic life, which during the Renaissance was most productive in poetry and theatre. From the Middle Ages the Cathedral of St Mary and the monasteries of the Dominicans and Friars Minor were the centres of musical activity; the latter monastery has an important music library. The earliest report of the cathedral organ dates from 1389; organs in the Dominican monastery and the church of St Vlaho (Blasius) were installed early in the 15th century. The city supported a band of musicians from the 14th century.

The beginnings of opera were noticed in Dubrovnik in 1617 Paskoj Primović published his translation of O. Rinuccini's *Euridice*, and in about 1620 Ivan Gundulić translated Arianna. Junije Palmotić's *Atalanta* (1629) was subtitled 'Music performed by the company of Isprazni'; the score has never been found. In the 18th century operas were performed by visiting Italian companies, a permanent opera company was not established. At that time the court of the rector supported two orchestras, the military Banda del Principe and Orchestra del Rettore which played indoors. For a time L. Sorkočević, a composer and member of the nobility, supported a private orchestra. The Philharmonic Orchestra was founded in 1925 as a semi-professional body and reconstituted in 1946 as the fully professional Dubrovački Gradski Orkestar (Dubrovnik City Orchestra). Dubrovačke Ljetne Igre, the music and drama festival founded in 1950 and held annually in July and August, has acquired an international reputation. The School of Music was opened in 1946, and in 1968 the Zagreb Academy of Music opened a section of its department for string instruments in Dubrovnik.

BOJAN BUIĆ

Dubuc. See DUBUT family.

Du Buisson [Dubuisson]. A name common to many French and Flemish composers, singers, organists and musicians active from the early 16th century to the late 18th century. Apart from those listed below, none of whom is known to be related, other known composers of this name include Mathurin (fl 1489–1514), known by one chanson (in *RISM* 1504³, possibly by Mathurin Forestier), René (b 1703) and Gabriel (fl 1724), both known by *airs* published in French anthologies (1724–6). Other musicians of this name held various church and court posts, mainly in Paris and Geneva.

(1) **Jacques du Buisson** [Du Buysson] (fl Paris, 1550–70). French organist and composer. He served in the *chambre du roi* under Henri II and Charles IX. 11 chansons for four voices published in Paris are ascribed to 'Du Buisson' or 'Buysson' (*RISM* 1552⁴, 1553²⁰, 1554²⁰, 1554²¹, 1557⁹, 1557¹², 1559¹⁰, 1560²⁸, 1569¹¹). All the texts are amorous epigrams of little literary quality, typical of the pre-Pléiade generation. The musical style is generally homophonic with occasional hints of imitation and brief melismas at cadential points; as in other mid-16th-century chansons duple metre predominates, but a few pieces include brief pas-

sages in contrasting triple metre. Two three-voice chansons (*RISM* 1578¹⁵) use popular anecdotal texts set contrapuntally in an archaic style to music familiar from earlier settings.

(2) **Michel-Charles du Buisson** [des Buissons] (b Lille or Budweis [now Budějovice], fl 1560–73). Flemish or Bohemian composer and singer. His volume of motets for four to six voices *Cantiones aliquot musicæ, quæ vulgo moteta vocant* (Munich, 1573) refers to him as 'Flandrus insularis', but a manuscript collection of his motets and hymns (in *D-Rp*) gives his birthplace as Budvitz. He served at the Viennese court of the Archduke Ferdinand, later emperor, between 1559 and 1564. In 1564 he accompanied the ducal chapel of Ferdinand II to Prague and in 1566 to Innsbruck. He composed an epithalamium for the wedding of Johann Cripach in 1561, published in *Epithalamia duo in nuptus*. Jo. Cripaci (Nuremberg, 1561). 26 motets for five to seven voices ascribed to 'Michael Desbuissons' were included in the five-volume series *Novi thesaurii musici* (*RISM* 1568²–6).

(3) **Du Buisson** (d before 1688). Composer, viol player and teacher. In 1680 he took part in a concert of music for three bass viols, which, according to the *Mercure de France* for March of that year, was the first of its kind in France. The principal manuscript of his works (in *US-Wc*) is the earliest surviving collection of French music for solo viol; it is dated 1 September 1666 and was probably compiled by a pupil. It contains four suites in staff notation and two pieces in tablature, with frequent ornaments, fingerings and bowings and with brief instructions for bowing. Jean Rousseau, author of *Traité de la viole* (1687), criticized his technique ('il portoit très mal le main'), but Rousseau's rival, the Sieur de Machy, preferred Du Buisson's playing to Sainte-Colombe's. While the latter's pieces are predominantly of melodic interest (for which he was criticized by Machy), Du Buisson's are primarily contrapuntal and rich in double stops and chords, particularly in the allemandes. Another manuscript (in *F-Pn*), containing solo music for lra viol, includes an allemande and a four-movement suite by Du Buisson; the manuscript, which may be English, belonged in 1674 to 'I.B.R.' (which may denote Rousseau himself).

(4) **R. du Buisson** (fl 2nd half of the 17th century). Composer and musician. His first name is not recorded. All that is known about him is that he was an *ordinaire de la musique du Roi* during the reign of Louis XIV. He wrote a fair amount of sacred and secular music.

WORKS

2 motets, in *Motets de MM Lalande, Mathau, Marchand l'amé, Couprin et Dubuisson recueillis par Philidor l'aîné, fait à Versailles en 1697*, *F-V*.

Motet 'en symphonie', Iv, [bc], *Pn*.

Motet 'chanté devant le roi', in *Chants et motets*, *Pc* (signed 'Du Buisson').

Le triomphe de la paix, cantata, in *Grandes cantates*, *V*, and *Chants de la louange de Roi*, *Pc*.

Pièce de symphonie, lost, formerly *Pn* (authenticity doubtful).

(5) **Du Buisson** (d 1710). Composer. The only glimpse of his life is afforded by Titon du Tillet, who described him as a contemporary of Michel Lambert and a celebrated tippler ('fameux buveur') who 'willingly gave lessons in music and feasting for visitors to Paris, especially Germans'. Not surprisingly his musical output consists almost entirely of drinking-songs, which found an appreciative audience in their day. Their texts sometimes depict Du Buisson himself as a kind of per-

sonification of the *bon vivant*. The date of his death is appropriately established by a drinking-song commemorating it which was published in May 1710.

Dubuque [Dyubyuk], **Alexander Ivanovich** (b Moscow, 3 March 1812; d Moscow, 8 Jan 1898). Russian pianist and teacher, probably of French descent. He was a pupil of John Field. Among his own distinguished piano pupils were Balakirev, the critics Kashkin and Laroche, and Nikolay Zverev (teacher of Rakhmaninov, Skryabin and Zilotti). An intellectually controlled, poised and precise style (even for the interpretation of virtuoso pieces) is particularly associated with the Field-Dubuque Moscow tradition. Dubuque published a book on the technique of piano playing, *Tekhnika fortepiannoy igri* (Moscow, 1866) and also taught at the Moscow Conservatory (1866-72). Balakirev and Tchaikovsky dedicated piano pieces to him, and Balakirev persuaded him to write his 'Vospominaniya o Fil'de' ('Reminiscences of Field'), published first in *Knizhki nedeli* (December 1898) and reprinted in the *Russkaya muzikal'naya gazeta* (1916, nos. 34, 35, 38, 39) under the title 'Iz vospominaniy o muzikal'noy zhizni staroy Moskv' ('From reminiscences of musical life in old Moscow'). His most important musical publication was *130 russkikh narodnikh pesen* ('130 Russian folksongs', Moscow, c1855, 2/1865). He also composed some songs and piano pieces, including *Album pour les enfants* (Moscow, 1866), *3 études dans le style fugue* opp. 95-7 (Moscow, n.d.) and a capriccio *Le rossignol d'Alabieff* (Prague, n.d.).

EDWARD GARDEN

Du Bus, Gervais [Gervès]. French notary at the royal chancery in about 1313 and author of the ROMAN DE FAUVEL.

Dubut [Du But, Dubuc]. French musicians and composers bearing this name were active in Paris throughout the 17th century: they are listed below. It is not known if, or how, they were related.

(1) **Toussaint Dubut**. He was mentioned as a 'joueur d'instruments' in Paris in 1599.

(2) **Dubut** (first name not known). He was a violinist in Paris in 1636.

(3) **Pierre Dubut**. He is known to have been a lutenist in Paris in 1644. He was possibly the 'père' mentioned by René Milleran about 1690 in his list (in *F-Pn Rés* 823) of the foremost 17th-century lutenists ('MM Du But, le père et les deux fils').

(4) **Louis Dubut**. He was mentioned as a lutenist in Paris in 1644.

(5) **Nicolas Dubut** (b 1638; d after 1692). He was a master instrument maker and probably a lutenist in Paris in 1671. He may have been one of two sons listed by Milleran, and may have been the Du But mentioned as a lute teacher by Abraham du Pradel (*Livre commode des adresses de Paris pour 1692*, MS, F-Pn).

Identification of the second son in Milleran's list is difficult; Etienne Vaudry de Saizenay (in the second part of his lutebook, 1699; MS in F-B) mentioned only one son - 'Du But, le jeune et le vieux'.

WORKS

Edition *Oeuvres des Dubut*, ed M. Rollin and J.-M. Vaccaro (Paris, 1979) [138 pieces]

(signed 'Dubut' not attributable to individual members)

23 preludes, sarabandes, courantes, 17 miscellaneous pieces, all F-Pn
 Courante de Dubut le père, chaconne melody in *Airs propres pour le timpanon* and *Pièces de trompettes* mise en état et copie par le Sr Philidor, other pieces all F-P
 42 pieces, *Phthibault*
 Suites in A-Wn, D-Bd, ROu
 Pièces in 2 MSS, F-B

JOËL DUGOT

Du Buysson. See DU BUISSON, (1) Jacques

Duc, Filippo [Filippo de, Philippe de] [i.e. Duc, Philippe] (b Flanders, c1550; d after 1586). Flemish composer, resident in Italy. It is not known when he arrived in Italy, but he appears to have spent much of his life there, probably at Padua, for in 1570 he dedicated his first book of four-part madrigals to the Flemish students there, speaking warmly both of them and of Padua. He dedicated his madrigals of 1586 to Johann Jacob and Karl Kisl of Graz, sons of the treasurer to the Austrian Archduke Karl. This dedication is by no means the only evidence that Duc had connections with the Habsburgs for in 1568 ten of his motets were included in the first four volumes of the *Novi thesauri musici*, an anthology of motets dedicated to the Emperor Maximilian II, and in 1577 the registers of the imperial chapel record that he was paid 25 gulden for two masses written in honour of Maximilian. In addition some of his sacred works are found in Austrian MSS. His secular works include examples of the typically light music popular with university students. The overtones of parody in the mixture of languages of *Sequamini et socij*, a hymn to Bacchus, and in the quotation of street songs in the serenata *L'aria s'oscura* are heightened by the rapid declamation and the pseudo-dramatic alternation of voices. In this respect Duc's approach was similar to that of Alessandro Striggio (1) and Orazio Vecchi.

WORKS

PATRICIA ANN MYERS

Du Camp Guillebert, Pierre. See D'AUXERRE, PIERRE

Du Cange, Charles (Dufresne), Sieur (b Amiens, 18 Dec 1610, d Paris, 23 Oct 1688). French historian, philologist and lexicographer. He was one of a celebrated group of learned 17th-century French scholars who founded modern historical and linguistic criticism. He was a student of law in Orléans and practised at the Parliament in Paris from 1631 before returning to Amiens, where he was appointed treasurer in 1645. He left in 1668 for Paris, where he produced his major works *Glossarium ad scriptores mediae et infimae latinitatis* (Paris, 1678; many subsequent edns., of which that by L Favre, Paris, 1883-7/R1954, is current) and *Glossarium ad scriptores mediae et infimae graecitatis* (Lyons, 1688/R1958). The first of these is of particular importance to students of medieval music for the large number of musical terms and instruments it describes, derived largely from primary sources.

ALBERT COHEN

Ducasse, Jean Roger. See ROGER-DUCASSE, JEAN

Du Caurroy, Eustache (b ?Gerberoy, baptised 4 February 1549, d Paris, 7 August 1609). French composer. According to La Borde, Du Caurroy was born in Gerberoy, he was baptized in Beauvais. He first entered royal service as a singer about 1570 but soon became known as a composer. In 1575 at the Evreux competitive music festival he won a prize for a French song for four voices, and again in the following year for the motet *Tribularer si nescirem*. Until 1595 Du Caurroy held the post of *vice-maitre de la chapelle royale*, but was promoted to the rank of composer to the royal chamber and *surnintendant de la musique* after Henri IV's reorganization of the musical household. His *Missa pro defunctis*, composed in 1606, was performed in 1610 at the funeral of Henry IV; this long work remained the official requiem to be sung at the funerals of kings of France. At the end of the 16th century and the beginning of the 17th, Du Caurroy gained wide recognition and was highly esteemed, and towards the end of his life accumulated several honours and benefits: He became canon of the Sainte-Chapelle in Dijon and of Sainte-Croix in Orléans, Prior of St Ayoul de Provins, of Passy and of St Cyr in Bourg; he also owned a large agricultural estate in Picardy. After his death Nicolas Formé erected a monument to his memory on which was inscribed a poem specially written for the occasion by Cardinal du Perron. Mersenne said of him in 1636, 'Du Caurroy reigns supreme for the great harmoniousness of his composition and his rich counterpoint... all the composers of France hold him to be their master'. Even as late as 1645 Du Peyrat, in his *Anniquitez de la musique de la chapelle royale*, called Du Caurroy 'one of Europe's great musicians'.

Du Caurroy studied the works and writings of Josquin, Willaert and Zarlino, and in the preface to his

Preces ecclesiasticae declared that he had learned his trade 'by reading good authors and imitating the ancients'. Of a somewhat conservative disposition, he was primarily interested in rigorous contrapuntal techniques, and sometimes sacrificed spontaneity for theoretical perfection. Nevertheless, his music often has a spaciousness and lyrical quality that is not without charm. Towards the end of his career he displayed particular interest in *musique mesurée à l'antique* according to the principles laid down by Antoine de Baif and put into practice by Claude Le Jeune in his *psaumes mesurés*. Du Caurroy's concern with mathematics is reflected in his 'abstract' musical compositions, the instrumental fantasias, which are based throughout on either sacred or secular cantus firmi. These works are his most original contribution to the repertory of 'pure' music; it has been claimed that the keyboard transcriptions provided the foundation of the French school of organ music which first became known through the works of Titelouze.

Although Du Caurroy had works published from 1583, certain of them, in the *Meslanges*, did not appear until after his death when they were brought to publication by his nephew, A Pitard.

For an illustration from Du Caurroy's *Fantaisies*, see SOURCES OF INSTRUMENTAL ENSEMBLE MUSIC TO 1640, fig. 2

WORKS

- Édition E du Caurroy: Les oeuvres complètes*, ed B Pidoux, Gesamtausgaben, ix (Brooklyn, 1975)
Preces ecclesiasticae, 4 7vv, 2 vols. (Paris, 1609), contains 44 motets, 4 psalms, 3 Te Deum
Meslanges de la musique, 4 6vv (Paris, 1610), contains 10 psalms, 36 chansons, 15 Noels, ed in *MMRF*, xvii (1903)
Fantaisies, 3 6vv (Paris, 1610)
Missa pro defunctis, 5vv (Paris, 1636)
Pie Jesu Domine, canon 6vv, in Mersenne *Harmonie universelle*, vii (Paris, 1636)
? chansons, 4, 5vv, 1583¹, 1, 4vv, 1583², 1, 4vv 1597¹⁰
3 masses, 4vv, lost, cited in Mersenne

PAUL-ANDRÉ GAILLARD

Duçayna. See DOI ZAÏNA

Duch, Benedictus. See DUCIS, BENEDICTUS.

Duchambge [Du Chambge, Duchange] [née du Montel], (Charlotte-Antoinette-)Pauline (b Martinique, c1778, d Paris, 23 April 1858). French composer. Brought up in a convent, she married a nobleman in 1796 but left him, evidently to follow the young Auber. This brought her into contact with the literary and artistic world, through which she received musical instruction (from Cherubini, Dussek and Auber himself) and met her lifelong friend, the poet Marceline Desbordes-Valmore (about 1815). She wrote exclusively drawing-room *romances*, almost 400 in all, which were admired by many of the leading French poets of her day, including Victor Hugo, Chateaubriand, Lamartine and Vigny; some of the texts were written especially for her. Many of her songs were published in Paris in the 1820s and 1830s, individually or in collec-

tions. She lived most of her life in dire poverty, helped only by her literary and musical friends.

RENÉE GIRARDON

Duché de Vancy, Joseph-François (b Paris, 29 Oct 1668; d Paris, 14 Dec 1704). French librettist, essayist and author of sacred tragedies. His first libretto, *Céphale et Procris*, was performed at the Académie Royale during March 1694 with music by Elisabeth-Claude Jacquet de la Guerre, and in 1695 two further works appeared, in February the opera *Théagène et Chariclée* and in June or July the ballet *Les amours de Momus*, both with music by Desmarets. In 1696 Duché and Desmarets left an *Iphigénie en Tauride* incomplete, but Danchet revised the text and Campra completed the music for the first performance in 1704. Another ballet with music by Desmarets, *Les festes galantes*, was performed in 1698, and Duché's last opera libretto, *Scylla*, set by Theobaldo di Gatti, was given in September 1701. Duché wrote his three sacred tragedies, *Jonathas*, *Absalon* and *Dehora*, for Mme de Maintenon's school for girls at St Cyr, but only *Jonathas* was staged, with incidental music by Moreau; the first performance took place in Mme de Maintenon's chambers, and Louis XIV attended.

HAROLD E JOHNSON

Du Chemin [Chemyn], Nicolas (b Sens, c1515, d Paris, 1576). Parisian music printer. His active music-printing career lasted from 1549 to 1568. He later printed one music book in 1570, two books of theory in 1571 and a single music book in 1576. He thus occupied an important position between Attaignant, whose last music book under his own name was issued in 1550, and Le Roy & Ballard, who began a long career as royal printers of music in 1551.

Du Chemin was an engraver by trade and was also described as a bookseller in a document dated November 1540. He issued his first printed book in 1541. In 1543 he moved to the rue St-Jacques-de-Latran under the 'enseigne du Gryphon d'argent', the address from which he issued music as well as many non-musical books (on medicine, grammar, arithmetic, law and Latin literature) to the end of his career. In November 1545 he married Catherine Delahaye, ward of the printer Poncet le Preux, who was Attaignant's brother-in-law – a circumstance that undoubtedly helped turn his attention towards music printing. He purchased punches and matrices for music from PIERRE HAULTIN on 19 February 1547 and on 7 November 1548 received a royal privilege 'to print all new music that has not been printed before' for a period of six years from the date of his first publication. The first collection, *Premier livre contenant xxvii pseaulmes de David*, came out in 1549. The royal privilege was renewed in 1555 for ten years and again in 1566 for another six.

Du Chemin engaged musicians to supply the expertise he lacked for editing music. In a contract dated 1 October 1548 he asked NICOLE REGNES to sell him four collections of his compositions, which he would print 'in the manner and of the size of those which Pierre Attaignant has printed'; to teach him 'the art of music and ... to sing and hold his part'; and to 'review and correct well and devotedly ... the other books of music

which said du Chemyn wants to print or have printed for him'. For this Regnes was to receive a monthly salary and his room and board. The compositions were never printed, but Regnes stayed on in his capacity as editor until 1551. Between 1551 and 1555 Du Chemin had similar assistance from CLAUDE GOUDIMEL, who at first was still a student at the university. From the title-pages we know that LOYS BISSON acted in the same capacity between 1561 and 1567, and Henry Chandor is named as editor of the single book published in 1576.

If Regnes helped launch the music printing activity, it was under Goudimel's editorship that the house achieved its greatest success. Du Chemin was the first to print the music of Goudimel and Costeley. New and older works by Clereau, Colin, Manchicourt, Cadéac, Guyon and Janequin are also well represented in the output of this period. After the backlog of work prepared by Goudimel was exhausted and at a time when the firm of Le Roy & Ballard was beginning to dominate the music publishing trade in Paris, Du Chemin turned more towards new and unknown composers such as Cartier, Morel, Bersoy, Besancourt and A de Villars. One innovative event of his later career was the publication of the beautifully printed *Liber primus missarum Francisco Guerrero* in 1566.

The approximately 100 music books contain 693 secular songs, 178 psalms and *chansons spirituelles*, 73 motets and 41 masses. The instrumental music published includes one book for lute by J Belin (1556) and

Title-page of 'Missarum musicalium ... liber secundus' published by Du Chemin (Paris, 1568)

four livres de danseries (1559–64). Du Chemin printed two books of music theory in 1571.

SAMUEL F. POGUE

Ducis [Duch, Dux, Herzog], **Benedictus** (b nr Konstanz, c1490; d Schalckstetten, nr Ulm, 1544). German composer and Protestant pastor. The earliest certain references to him relate to his failure to acquire a pastorate in Ulm in 1532. In 1533 he did accept one in Stubersheim (near Geislingen), but in 1535 moved to another in Schalckstetten, where he remained until his death. Details of Ducis's earlier life are scanty, available only through casual remarks made in a number of letters. That he was born near Konstanz, for example, was mentioned in a letter of 12 June 1532 from the Ulm pastor Martin Frecht to Ambrosius Blauer. In another letter Frecht asserted that Ducis had lived in Austria with Simon Grynaeus who stated that Ducis was a friend of the great humanist Vadian. (It should be recalled that Vadian was associated with both Isaac and Paul Hofhaimer.) These facts establish at least vicarious connections between Ducis and the musicians of the Emperor Maximilian's inner circle, and suggest that he may have studied in Vienna while Vadian lived there.

The circumstances of Ducis's mature life are particularly difficult to establish because he has been confused with two other musicians: BENEDICTUS DE OPTIIS and BENEDICTUS APPENZELLER. With Optius, there is a genuine *Doppelmeister* problem (see Huber), for many historians have held Optius and Ducis to be the same man, despite the ten-year hiatus (1522–32) between the last recorded entry for the former and the first for the latter, but they are now generally thought to be two different people. With Appenzeller (who, as *maître de chapelle* to Mary of Hungary in Brussels, is clearly a different person from Ducis) the problem is one of ascription of works, for a large number of compositions inscribed merely 'Benedictus' are found in publications and manuscripts that might well have included pieces of either Ducis or Appenzeller. Bartha assembled evidence that enabled him to ascribe most of the disputed works to one man or the other. In general, compositions inscribed merely 'Benedictus' should be assigned to Appenzeller.

A rich source for Ducis's liturgical compositions would have been the lost *D-HEu* Cod.Pal.Germ.318. According to an inventory of 1544, it contained *Graduale maiorum festorum sine prosa*, *Graduale de sanctis*, *Antiphonarum per annum*, *Antiphonarum de sanctis* and *Hymni per annum*. Ducis's fondness for liturgical cycles furnishes another link between him, Isaac and Senfl. Apart from these lost Latin liturgical works, probably composed during Ducis's earlier years, he wrote settings of Latin odes (as did Hofhaimer), German lieder and German vernacular psalms. The publication of his works in the important collections of his day attests to the esteem he enjoyed. Ducis's style

resembles that of Isaac and his followers, particularly Senfl and Rener, both of whom were at Emperor Maximilian's court.

LOUISE E. CUYLER

Duckles, Vincent H. (arrs) (b Boston, Mass., 21 Sept 1913). American musicologist and librarian. He took the AB at the University of California, Berkeley, and the MA (1937) and the EdD (1944) at Columbia University. After teaching for a time he returned to Berkeley, taking a degree in librarianship in 1950, and studying under Bukofzer for the doctorate (1953). He was appointed head of the music library at Berkeley in 1947, and subsequently associate professor (1957) and full professor of music (1962). He has been awarded numerous fellowships and grants, and served as president of the Music Library Association (1960–62). He has also been active in both the American Musicological Society and the International Association of Music Libraries. Beginning with his dissertation on the Gamble Commonplace-book, Duckles has made important contributions to the history of 17th-century English song. More recently he has turned his attention to the historiography of music and the history of musical

scholarship. His bibliography of music reference and research materials is an indispensable aid to every musical scholar. In some ways, however, his major achievement is the magnificent collection of books and music over which he presides at Berkeley, and which he was instrumental in building into one of the finest libraries for musical research in the USA.

PHILIP BRETT

Du [de] **Cousu, Antoine** (b. Amiens, c.1600; d. St Quentin, 11 Aug. 1658). French ecclesiastic, musician and theorist. He was a singer at the Sainte-Chapelle in Paris in 1632 and then served as *maître de chapelle* at Noyon before being named *maître de musique* and canon (about 1635) at the collegiate church in St Quentin. Only one composition by him appears to have survived, an instrumental *Fantaisie 'en faveur de la quarte'* printed by Mersenne in *Harmonie universelle* (1636-7: 'Traité des consonances', book 5, pp.300ff) and in open score by Kircher in *Musurgia universalis* (1650: i, pp.627ff). But his reputation rests upon his contributions as a theorist; it did so even during his own lifetime, and in this regard he figured prominently in the correspondence of Mersenne. His major work is *La musique universelle, contenant toute la pratique et toute la théorie* (Paris, before 1658/R1972). Although reference to its being prepared for printing appears as early as 1633 (*Correspondance du P. Marin Mersenne*, iii, p.362), the two examples that survive (in *B-Br* and *F-Pm*) are incomplete: the treatise ends abruptly at chapter 32, p.208, of book 3, and indications are that they are simply printers' proofs of the first part of a work that may never have seen publication. What remains constitutes three books, devoted to a systematic presen-

tation of the principles of music and notation and of rules for the theory and practice of both simple and figural counterpoint, in from two to six parts, in early 17th-century style.

ALBERT COHEN

Ducrest de Saint-Aubin, Stéphanie-Félicité. See GENLIS, STÉPHANIE-FÉLICITÉ.

Ductia. A medieval Latin term denoting two musical forms. The term is known only from Johannes de Grocheo's treatise *De musica* (c.1275), where it is discussed along with the *stantipes* (see ESTAMPIE). Grocheo made a distinction between a vocal and an instrumental form, calling the former *cantilena ducta* and the latter merely *ducta*. The discussion of the vocal form is far from clear: Grocheo stated that 'the ductia is a song [*cantilena*], light and rapid in ascent and descent, which is sung by boys and girls for dances [*in choreis a iuvenibus et puellis*] like the French song *Chi encoz querez amorettes*' (Rohloff, p.132); that song has not survived. Grocheo's subsequent discussion and his comparisons with other songs do not clarify this description of the form.

The discussion of the instrumental form is much clearer. It is a textless composition 'measured with an appropriate beat [*cum decenti percussione mensuratus*]' implying that 'beats [*ictus*]' measure it and the motions of the one who does it, they spur the human mind to move ornately [*ornate*] according to the art which one calls dancing [*ballare*], and they measure its motion in ductias and dances [*choreis*]' (Rohloff, p.136). The *stantipes* and the *ductia*, according to Grocheo, consist of a certain number of *puncta* (see PUNCTUM), each of which in turn consists of two parts identical with one another in the beginning but with different endings called *apertum* ('open') and *clausum* ('closed'). The *stantipes* is supposed to have six or seven *puncta*, the *ductia* only three or four. Levarie (*JAMS*, xxvii, 1974, p.367) has suggested that, beside this distinction, it is the *ductia's* constant (*decenti*: 'regular') number of beats per *punctus* that differentiates it from the *estampie*, whose *puncta* have a varying number of beats. Grocheo's *ductia* would then resemble the pieces entitled 'dansse' (see DANSSI REAL) in the 'Manuscript du Roi' (*F-Pn* fr.844, ff 5r, 104v), which each have three regular *puncta*.

HENDRIK VANDERWERF

Duda [dudy]. Types of BAGPIPE; see also HUNGARY, §II, 5(iv), and POLAND, §II, 5.

Dudelsack (Ger.). BAGPIPE.

Due corde (It.: 'two strings'). In piano music of the late 18th and early 19th centuries, a direction to depress the 'una corda' or 'soft' pedal part way, so that the hammers

strike only two of the three strings provided for each note, producing an effect intermediate between UNA CORDA and 'tre corde'.

Duèse, Jacques. See JOHN XXII.

Duet (Fr. *duo*; Ger. *Duett*; It. *duetto*). A vocal or instrumental composition for two performers with or without accompaniment, in which the interest is shared more or less equally between the duettists. The term is not normally applied to the repertory of sonatas for keyboard and another instrument from the 18th century to the present day. Some composers have preferred the term 'duet' for vocal and 'duo' for instrumental pieces, but that usage is by no means universal.

Florid two-voiced tropes and conductus of the 13th century were almost certainly sung by soloists and are early examples of true duets (see HAM nos.37 and 38). In motets and mass settings of the 15th century such passages often alternated with choral sections (HAM no.56); in many sources of Dunstable's music they bear the rubric 'duo' (see MB, viii, London, 1953). In Gero's first book of madrigals for two voices (1541) and Morley's canzonets the duet has become an independent piece. During the Renaissance the vocal and instrumental BICINIUM exemplifies the beginnings of a duet literature which is didactic in intention, and persists through works like Pepusch's *Aires for two Violins made on Purpose for the Improvement of Practitioners in Consort* (1709) and Haydn's piano duet *Il maestro e lo scolare* to such 20th-century pieces as the violin duets of Bartók or nos 43 and 55 of his *Mikrokosmos*.

In vocal duets a distinction may be drawn between pieces in which both voices sing the same text and those which take on a dramatic form (as in the 17th-century DIALOGUE or the operatic love duet) where each singer generally has different words. The former type includes, however, a number of curious cases where a single character is represented by two voices. The words of Jesus in Schutz's *Auferstehungshistorie* (1623) are allotted to vocal duet, as are those of Mary Magdalena, and in 17th-century oratorios the part of the narrator ('historicus') was often similarly treated. The tradition was revived by both Britten in the canticle *Abraham and Isaac* (1952) and Stravinsky in *The Flood* (1962) for the voice of God.

In the Baroque period the *duetto per camera* was an important form of vocal chamber music of which innumerable examples are found in the works of M. Cazzati, A. Steffani, A. Scarlatti, Handel and others, many conceived as extended cantatas consisting of recitatives, arias and duets, sometimes with instrumental obbligato (e.g. HAM no.273). The same techniques were applied to sacred texts in a motet such as Campora's *Cantate Domino* (HAM no.257) or, on a more extended scale with orchestra, in Pergolesi's *Stabat mater*. In the 19th century duets parallel to the lied in structure form a considerable though now neglected part of the output of Schumann, Mendelssohn and Brahms.

In opera the duet was employed almost from the outset. Monteverdi's *Orfeo* and *L'incoronazione di Poppea* both have them as concluding vocal items, the latter, a love duet for Poppaea and Nero, being the earliest significant example of a genre which persisted until the duet became merged in the general continuity of the music (Verdi, Puccini, etc) or dissolved into a musical dialogue in which the voices no longer sang

simultaneously (later Wagner, R. Strauss, etc). Before that, in works of Bellini and others, the love duet had become characterized by a good deal of singing in 3rds or 6ths, acquiring a mellifluous quality of sound appropriate to shared emotion, in place of independent treatment of the voices ('Fra gli amplessi' in Mozart's *Così fan tutte* provides an example of vocal textures changing to symbolize the flux of emotion). Transferred from an operatic context the love duet played a part in the symbolic representation of, for example, Christ and the Soul in Bach's cantata *Wachet auf* (BWV140). Dramatic ensemble duets such as those in Mozart's *Le nozze di Figaro* occupy an important place in opera of the Classical period, though they were by no means unknown before (e.g. 'At persecution I can laugh' in Handel's *Saul*).

Keyboard duets became increasingly popular during the 18th century (see PIANO DUET) and some were even composed for organ (for example by Samuel Wesley). A great deal of music, mostly for two recorders, two flutes or two violins, was published during the century, primarily for amateurs to play; much of it is on a trivial level, but the repertory includes works by Telemann, Geminiani, Leclair, J. W. A. and C. Stamitz, Boccherini, J. C. Bach, Haydn, Mozart (for bassoon and cello, violin and viola, and two horns) and later Beethoven (viola and cello, clarinet and bassoon), Viotti and Spohr. In the 20th century there are instrumental duets by Reger (two violins), Poulenc (two clarinets, clarinet and bassoon), Ravel and Kodály (both for violin and cello) and Hindemith (violins, flutes, violin and clarinet) as well as Bartók.

The term is occasionally applied to a piece for a single performer which simulates the idea of a real duet, e.g. Mendelssohn's *Lied ohne Worte* subtitled 'Duetto', op.38 no.6, and Bartók's 'Duet for Pipes', no.88 of *Mikrokosmos*.

MICHAEL TILMOUTH

Dueto, Antonio (b Piedmont, possibly between Alessandria and Tortona, 1530-40; d in or after 1594). Italian composer. The title-pages of his publications state that he came from Piedmont. In 1583 he was *maestro di cappella* of Genoa Cathedral, but only for a year. He remained at the cathedral, however, as a canon regular until at least 1594. Together with G. B. dalla Gostena and G. B. Pinello he belonged to the madrigal school that flourished at Genoa in the second half of the 16th century. His many madrigals, especially those in which he used chromaticism simply and naturally, were admired for their effectiveness and direct expression.

SALVATORE PINTACUDA

Duetтино (It., diminutive of *duetto*). A short duet of concise form, vocal or instrumental. Mozart so described 'Via resti servita' in *Le nozze di Figaro* and 'Là ci darem' in *Don Giovanni*, though neither is particularly short.

Du Faur de Pibrac, Guy. See PIBRAC, GUY DU FAUR DE.

Dufaut [Du Faut, Du Fault, Dufau] (*d* before 1682–6). French lutenist and composer. According to Titon du Tillet he was a pupil of the Gaultiers. He was one of the most renowned lutenists of the 17th century. René Milleran (in his collection of lute music, c1690, *F-Pn* Rés.823) mentioned him as one of the finest players of his day, ranking him with the Gaultiers, Gallots and Mouton. Nor was this opinion confined to France, for in Germany both Baron and Le Sage de Richéc (in his *Cabinet der Lauten*, 1695) referred to him as a model, while in England Mary Burwell praised his 'very grave and learned' playing (see Dart). These tributes suggest that he was certainly a player of some character, and it is regrettable that so little is known about his life. One possible piece of evidence – a document of August 1635 which mentions one Francis Dufau, 'player of instruments' – cannot conclusively be said to refer to him. He was probably in England about 1670, for at that time Constantijn Huygens wrote to a correspondent in London: 'I hope that the famous M. Dufaut is alive and well'. Since his *tombeau* by Laurent Dupré appears in the first part of Etienne Vaudry de Saizenay's MS lute-book, dated 1682–6, he must have been dead by then.

Among the 80 pieces known to be by Dufaut are preludes, allemandes, courantes, sarabandes, giges, a pavan and a *Tombeau de M. Blanrocher*. A large number of his compositions were printed in Pierre Ballard's important lute collections of 1631 and 1638, and others are found in lute MSS in France, Germany and England. Like many lutenists of the period, Dufaut preferred the newer tunings of the lute to the old tuning (*G-c-f-a-d'-g'*) that had been customary during the 16th century and the first 20 years of the 17th. He was one of the first to make systematic use of the three new tunings *G-c'-f-a-c'-e'*, *G-d-f-a-b-d'-e'*, and *A-d-f-a-d' f'*, the last of which remained the basic tuning until the decline of the lute in France. Dufaut's music is generally characterized by great rhythmic flexibility, which is expressed through notated rubato, arpeggiated chords, and by the anticipation and retardation of melody notes (particularly at cadences). The melodic lines often give an effect of improvisation, and they sometimes extend over a wide range. Most of the compositions are for ten- or 11-course lute.

JOËL DUGOT

Dufay [du Fay], **Guillaume** (*b* c1400; *d* Cambrai, 27 Nov 1474). French composer, acknowledged by his contemporaries to be the leading composer of his day. He held positions in many of the musical centres of Europe, his compositions were copied and performed wherever polyphony was practised, and every other composer of the 15th century was affected to some degree by his work.

1 Life 2 Compositions, general 3 Chant harmonizations 4 Motets 5 Mass Ordinary parts and cycles 6 Secular works 7 Sources, 8 Lost works and possible attributions 9 Conflicting and questioned ascriptions 10 Editions

1. LIFE. Dufay was probably born in or around Cambrai, where the family name was common; a Jean dou Fayt repaired organ pipes at Cambrai Cathedral in 1380–81, for example. The first mention of Dufay is in documents of that cathedral, where a choirboy named Willelmus is listed for the years 1409–12. From that it is assumed that he was born around 1400. Nicolas Malin was *magister puerorum* there from 1390 until 1412, followed by Richard Loqueville for the period 1413–18. Dufay learnt to write music not from any formal study, but from performing under these men, probably from copying music, and from varied associations with those older musicians who were composers themselves and in those ways were his teachers. One of his first works is a reworking for three voices of a four-voice Sanctus by Loqueville, and other early pieces show clear stylistic indebtedness to his master, 18 of whose compositions survive.

Some time before 1420, Dufay must have entered the service of the Malatesta family in Pesaro, Italy. There is no documentary evidence of this, but three of his compositions datable from the period 1420–26 were written for the family. The motet *Vasillisa ergo gaude* is for Cleofe Malatesta and Theodoros, son of the Byzantine Emperor Manuel Palaiologos, written before their wedding in 1421, the ballade *Resvellés vous* is for the marriage of Carlo Malatesta and Vittoria Colonna on 18 July 1423; and the motet *Apostolo glorioso* is for the consecration of the restored church of St Andrew in Patras (Greece) in 1426, a ceremony in which Pandolfo Malatesta, as archbishop, was involved. It is not certain when or under what circumstances Dufay went to Italy. He may have been in the retinue of Pierre d'Ailly, Bishop of Cambrai, at the Council of Konstanz which ended in the summer of 1418. D'Ailly and the elder Carlo Malatesta played prominent roles at this council, and Dufay's association with the Malatesta family could have begun then. Documents at Cambrai place a 'Guillot' Dufay there as late as 1418. A document placing a 'Guillaume de Fays' in service at St Germain-l'Auxerrois, Paris, in 1420 further confuses the question of when he took up residence in Italy.

Dufay was back in and around Cambrai for at least some part of the period 1426–7. The text of *Adieu ces bons vins de Lannoys* (1426) suggests that he held a post at Laon. A leave of absence sent on his behalf in 1427 from Cardinal Louis Aleman in Bologna to St Gery in Cambrai identifies him as a deacon of that church. A *littera testimonialis* prepared in Rome in 1430 states that Dufay held two benefices in the diocese of Laon –

one at Laon Cathedral itself, in the chapel of St Fiacre, and the other at the altar of St John the Baptist in the church of Nouvion-le-Vineux – in addition to the one in Cambrai. But it must be remembered that the holding of a prebend or benefice at this time could be honorary, not requiring residence. Dufay may have had some contact with English musicians at this time. Duke Philip of Burgundy had undertaken a war against the French king in 1419 that was to last until 1430, and the English sided with him.

In December 1428 Dufay became a singer in the papal choir, the most famous musical establishment in Europe. His salary of four gulden a month was raised to five the following year, and he remained in the position until August 1433, spending most or all of his time in Rome. He was already one of the most famous musicians in Europe; while holding this important post, he was at the same time honoured by benefices from churches in the north. He also maintained and further developed ties with several courts in northern Italy. The motets *Ecclesie militantis*, possibly written for the coronation of Pope Eugene IV in 1431, and *Supremum est mortalibus*, for the Peace of Viterbo in 1433, date from this period.

The ballade *C'est bien raison*, composed in 1433 for Niccolò III, Marquis of Ferrara, is the first documentation of Dufay's contact with the important and art-loving d'Este family; he must have been known in Ferrara during his service with the Malatesta family, however. Ferrara and Rimini are not far apart, and the two courts had been related by an important marriage, that of Niccolò to Parisina Malatesta. Dufay's relation with the d'Este court was of long duration. He was in Ferrara in May 1437, receiving a gift of 20 gold ducats from Niccolò. The latter died in 1441, but his successor Leonello continued the ties with Dufay. He sent 20 écus to the Borromei bank in Bruges in 1443 for Dufay, who by then was back in the north, and a large manuscript of motets and other polyphonic pieces for vespers (*I-MOe* x XI 11) copied around 1445 in Ferrara is devoted largely to Dufay's music.

An even longer and closer contact was with the court of Savoy. In 1434 Duke Amadeus VIII of Savoy left court duties to his son Louis, who married Anne of Cyprus on 8 February of that year. Dufay was *maître de chapelle* for this occasion, and the musical forces assembled were so impressive as to be described as the best in the world. Dufay's name reappears in the register of Duke Louis' musicians for the period 1437–9. The motet *Magnanime gentis*, celebrating a treaty between Berne and Fribourg, was performed on 3 May 1438 probably under Dufay's direction. He held a degree in canon law, which he may have earned at the same time that Duke Louis himself was studying at Turin University, beginning in 1436. In August 1434 he went home to visit his mother, probably staying for some months. His hymn cycle and other settings of liturgical pieces may have been written at that time. He returned to Savoy, but in June 1435 he was again with the papal choir, serving until June 1437. Pope Eugene IV was experiencing a troubled pontificate; he had been forced to leave Rome and was in Florence when Dufay rejoined the choir, then moved to Bologna in 1436, to return to Rome only in 1443. Three of Dufay's motets were written during his year in Florence – *Mirandas parit*, *Salve flos Tusce gentis Florentia*, and one of his most famous and imposing works, *Nuper rosarum flores*,

composed for the dedication of Brunelleschi's dome of the cathedral on 25 March 1436.

Dufay's ties with the north became progressively closer, although it is not known when he took up permanent residence in Cambrai. He was appointed canon at the cathedral there in 1436, replacing Jean Vivien. A letter from one of the pope's cardinals in Bologna, addressed to the Bishop of Cambrai and dated 21 March 1437, concerns Dufay's continuing residence in Italy enabling him to perform his duties with the papal choir, while holding his canonry in Cambrai. He was granted a prebend at St Donaas in Bruges in 1434.

From 1440, when 36 lots of wine were delivered to him on the feast day of St John the Evangelist (27 December), until his death in 1474, Dufay is traceable in Cambrai except during the years 1451–8. He is mentioned usually in connection with musical matters but sometimes administrative ones. He was there when his mother Marie died in 1444. In May 1445 he took

Guillaume Dufay with a portable organ, and Binchois with a harp: miniature from 'Le champion des dames' by Martin Le Franc, 15th century (F-Pn fr.12476, f.98r)

part in deliberations of the cathedral chapter. Money was appropriated by the chapter for the copying of music manuscripts on 26 May 1445. Jean de Namps is the first scribe identified by name, and in 1446 there is the first mention of Simon Mellet, who was to copy music at the cathedral for the next quarter-century. Dufay was granted a sum of 60 écus on 21 April 1451 for his services rendered to the cathedral, the citations reading 'propter qualitatem et merita magistri Guillelmi Du Fay, qui nostram ecclesiam cantibus musicis decoravit'.

During the 1450s he spent seven years in Savoy, and the probate of his will (in Archives du Nord 4 G 1313, Lille) says that Pierre de Wez looked after his house during that time. From 26 May to 1 July 1450 he was at Turin; and a letter from the Duchess Anne of Savoy in the next year implies that he was nearby. On 22 February 1454 he wrote to Giovanni and Piero de'

Medici from Geneva. From 1 May 1455 to 1 May 1456 he is listed as *maître* of the Savoy chapel. On 14 September 1458, shortly before his documented return to Cambrai, he was in Besançon, called in as a consultant to determine if the antiphon *O quanta exultatio* was in the 2nd or 4th mode.

His last years in Cambrai were years of substantial eminence. An appointment as canon at Ste Waudru, Mons, had come in 1446; and he is recorded as having visited there with Binchois in 1449 to advise on the rebuilding of the church. Now he was regarded as one of the most famous persons of his day, honoured and sought out by musicians and others. The composers Morton and Hayne van Ghizeghem came to Cambrai, perhaps to be with him, and Tinctoris spent four months there in 1460. In 1462 Ockeghem was his guest (see OCKEGHEM, JOHANNES, §6). Antonio Squarcialupi, famous organist and owner of the important 14th-century manuscript still bearing his name, wrote to him in 1467. For the inauguration of Cambrai Cathedral in 1472 Pierre VII de Ranchicourt, Bishop of Arras, stayed and dined at Dufay's house.

Dufay continued to compose even in his last years. Records of payment to Simon Mellet identify new compositions by the aging master almost until the year of his death, but sadly few of the works of his most mature years survive. He died on Sunday 27 November 1474, after many weeks of illness. His last testament requested that his own *Ave regina celorum*, with supplications for mercy interpolated into the standard text, be sung at his deathbed. He was buried in the chapel of St Etienne in the cathedral he had served so long; his tombstone was recovered in 1859 and is now in a museum in Lille. Lamentations on his death by Busnois, Ockeghem and Hénart were composed, and copied in Cambrai in 1475, but have been lost.

2. COMPOSITIONS: GENERAL. Dufay began composing at a time when musical style was in a period of relative stability. Important new techniques emerge only in his later masses and a few of his last motets; otherwise he was content to create works within the frameworks of style and form that dominated the period. He cannot be thought of as one of the great innovators in the history of music; 'originality' in the Romantic and modern sense of the word was foreign to him. Individual pieces within large groups of works, such as his hymn settings or secular works, are very much like one another. He was regarded during his lifetime as the greatest composer of the day, a judgment that has been accepted ever since. He gained his fame not from bold innovation but rather from his perfect control of all elements of a composition, his genius for graceful, memorable, beautifully sculptured melodies, his skill in varying his textures with imitation and canon, and his instinct for pleasing proportions in individual phrases, sections, and entire pieces. This is not to say that Dufay lacked originality or was in any way reactionary. To the contrary, he played an important role in the development of fauxbourdon and the cyclic mass, was one of the first composers to handle four-voice texture with convincing skill, and the movement in many works of his middle years towards clearly defined tonal and functional harmonic writing both anticipated and helped prepare one of the important stylistic developments of the following century. But a much more intense period of change was to take place soon after his death, with the works of such

men as Josquin, Martini, Obrecht and Ockeghem. Dufay's compositions stand as the supremely polished works of a long period of slow and tranquil stylistic change.

3. CHANT HARMONIZATIONS. More than half Dufay's compositions are written in a style best described as chant harmonization. One voice in these pieces – almost always the cantus – follows the melodic contour, text and phrasing of a liturgical melody. Modest melodic elaboration may occur before a cadence, on sustained notes, or when the original melody has a large leap. The other voices, usually two of them, are fitted to this melody in homorhythmic fashion, sometimes with text but more often without. Fauxbourdon, a technique in which the middle voice shadows the melody a 4th lower and therefore has no independence, is common. A listener familiar with the chant melody could hear and follow it throughout, and would in fact hear the piece not as a new composition but as an elaborated version of music already known (see ex.1). Such pieces were of

Ex 1 *Jesu corona virginum* (hymn)

course sung as substitutes for the chant on which they were based. An examination of this repertory can reveal on what occasions polyphony was sung, and how much of it. Dufay's antiphons, hymns, *Magnificat* settings, sequences and settings of single items of the Mass Ordinary are, with very few exceptions, in this style. This is music for Vespers and the Mass. For major feasts, and feasts of important local saints, polyphonic settings of the antiphon, *Magnificat*, sequence and hymn were available, and there is evidence that one or more motets would be interpolated also at Vespers. There are settings of the Kyrie and Gloria for most of the same feasts, and motets may also have been interpolated at Mass. The more important a feast, the more polyphony is found for it.

Polyphony in this style was performed for public worship in cathedrals and large churches, and probably also at private devotional services of powerful families who could afford to maintain their own chapels. Performing practice was flexible: such pieces could be per-

A few of his motets are works of a different sort. Such pieces as *Flos florum* and *Ave virgo que de celis*.

Musical score for the vocal part of "Nec suus". The score is written on four staves. The first two staves are for the vocal line, and the last two are for the basso continuo line. The vocal line begins with a treble clef and a key signature of one flat (B-flat). The tempo is marked "Allegretto". The vocal line has two measures of music, each followed by a rest marked "A -". The basso continuo line has two measures of music, each followed by a rest marked "Nec suus".

with three-voice, treble-dominated texture, bits of imitation and expressive fermatas, and their more direct and intimate expression of religious sentiment, are anticipations of the song motets that were to be so popular in the second half of the century. Some of his later sequences and antiphons, though still paraphrasing liturgical melodies, use such flexible and sophisticated techniques that they are here classified as motets rather than chant harmonizations. And several very late works, most notably the four-voice *Ave regina celorum*, begin to approach the motet style of the Josquin period, with fluent four-voice imitative texture, extremely free treatment of chant melodies, some paired imitation, and contrast between polyphony and homophony. The loss of a number of his latest works makes it difficult to evaluate the stylistic change in the last decades of his life.

5. MASS ORDINARY PAIRS AND CYCLES. The most impressive achievement of the 15th century was the development of musically unified settings of the entire Mass Ordinary. The pairing of two sections of the Ordinary with some musical unity was the first step leading to cyclic organization of all five sections. Six such pairs by Dufay are known, three of the Gloria and Credo and three of the Sanctus and Agnus Dei. All are early works, and musical relationships between the two members of a pair are of a quite general nature: they are in the same mode, are written for the same number of voices, share the same texture and voice ranges, and may have a similar structural design in terms of sequences of mensurations and alternations of two- and three-voice writing. Several of them, such as the Gloria-Credo (*Opera omnia*, iv, 31) and the Sanctus-Agnus (iv, 53) are further unified by a head-motif, that is, melodic identity in one or more voices at the beginning of the two sections (exx.3a and b).

Ex.3

(a) Gloria

(b) Credo

The two surviving three-section masses, a Kyrie-Gloria-Credo and a Kyrie-Sanctus-Agnus (possibly a complete ferial mass), are also early works. They represent an intermediate step between mass pairs and complete cycles, in terms of number of sections, but they demonstrate no advance in compositional techniques.

Nor does Dufay's first 'complete' cyclic mass, the *Missa sine nomine*. The five sections are all certainly by him, and they are grouped in consecutive order in one manuscript. But while the Kyrie, Sanctus and Agnus are related to one another by the same devices mentioned above, with the Kyrie and Sanctus further unified by a head-motif, the Gloria and the Credo are musically quite independent of one another and of the other sections. This is more a composite mass than a true cycle; Dufay – or perhaps the scribe of the manuscript –

apparently grouped a tripartite mass with an older and musically unrelated Gloria and Credo. The *Missa S Jacobi*, however, was written as a unified cycle. The five sections of the Ordinary are unified by mode, texture, number of voices and mensural patterns. There is no common musical material, but rather some of the sections paraphrase appropriate chant melodies. This mass is unusual in its inclusion of four sections of the Proper – the introit, alleluia, offertory and communion, also paraphrasing chants appropriate for the feast of St James. The *Missa S Antonii Viennensis* also uses chant paraphrase, but the work may not be by Dufay; only the Kyrie is attributed to him. The relationship of the last three sections to the first two is quite tenuous, there is no apparent musical similarity between the five sections, and even if it is an authentic work it represents no progress whatsoever in bringing musical unity to a multi-sectional work.

All of Dufay's later masses are tenor masses; but the cyclic tenor mass did not originate with Dufay. Its probable ancestor was the isorhythmic motet and the first known tenor masses are by English composers such as Power and Dunstable. Power's *Missa 'Alma Redemptoris'* is an earlier work than the *Missa 'Caput'* and might have served as a model for it; the two works are quite similar in general structure and even in some details. There is some suspicion that the *Missa 'Caput'* itself is not by Dufay but by some English composer. Dufay's *Missa 'Se la face'* is surely authentic, though, and is similar to the *Missa 'Caput'* in many ways. Certainly Dufay took over the general concept of the tenor mass from the English. He transformed it by composing works for four voices – the early English masses are for three – and by grafting on to it some of the unifying devices used in his earlier masses, such as the head-motif. Further, where the English had always used a liturgical melody for the tenor selected for its appropriateness to the feast for which the polyphonic mass was to be performed, Dufay was apparently the first to use a secular piece as the *cantus prius factus*. Most important, he wrote tenor masses that were so finely fashioned and so widely admired, performed and emulated that the tenor mass became the most common type of polyphonic setting of the Mass Ordinary for the next century.

Three late masses continue and refine the techniques of the tenor mass. The *Missa 'L'homme armé'*, more loosely organized, may have been the first composed on this famous tune. The *Missa 'Ecce ancilla'* is a mature, splendid, perfectly proportioned work. Dufay's last mass, the *Missa 'Ave regina celorum'*, looks as much to the future as to the past with its beautiful handling mixture, and contrast of two-, three- and four-voice writing, its smooth integration of canon and imitation into the texture, and its effective alternation of homophony and contrapuntal writing. Perhaps it was his last composition. In any event, it is a superb work, one of the finest of the entire century, and a fitting climax to the career of this singularly talented musician.

6. SECULAR WORKS. Dufay's first secular works probably date from the years of his employment by the Malatesta family in northern Italy. He wrote secular works from this time until virtually the end of his life, though this activity was more intense when he held a position at a secular court, and later in his life when his great fame assured him independence. Even his first

works are graceful, polished miniatures, the work of a composer with a natural genius for writing beautiful melodic lines. These pieces were written for performance at court, at banquets and other social events, performed by skilled solo singers and instrumentalists. They are intimate, personal expressions of love, sorrow, friendship, adventure, with religious symbolism underlying many of the apparently secular texts.

The best and earliest manuscript sources, from northern Italy, carefully differentiate between vocal and instrumental performance. The majority of the pieces are written for a solo singer with two accompanying instruments, melodic interest being concentrated in the fluid top line. *Je requier a tous amoureux* is a typical piece in this style. The notation is so careful that in such works as *Passato è il tempo* and *Je languis en piteux martire* it can be seen that the vocal phrases are preceded, interrupted, and followed by instrumental passages in a contrasting, more florid style (ex.4).

Ex.4 *Passato è il tempo* (ballata)

Many other pieces, of which *La dolce vista* is an example, are written for two vocal parts and one instrument. The two voices are often treated in imitation or strict canon, as in *Par droit je pus bien complandre*. For Dufay, the devices of imitation and canon were usually associated with vocal writing, not instrumental. Phrases in three-part imitation sometimes occur in pieces with text for one or two voices, text being supplied for all three voices for such sections. And in the small number of secular works with text in all three voices, such as *Resvelons nous* and *Ce jour de l'an*, imitation or at least rhythmic and melodic independence of all three voices is the rule.

Dufay's secular works show less change in musical style and structure from early to late than do his masses and motets. Early pieces use imitation, as do later ones. The early *Entre vous, gentils amoureux* has a strict

canon for two voices, as does the very late *Puisque vous estes campieur*. Texture, form and cadential patterns are surprisingly similar in works of all periods of his life. *Belle que vous*, probably one of his first secular compositions, has each of the three voices in a different mensuration; *Les douleurs*, from late in his life, has two voices in canon in different mensurations. His occasional excursions into four-voice writing are scattered from the very early *Invidia nimica* to the late *Donnés l'assault* and *S'il est plaisir*.

Three-quarters of his secular works are rondeaux; he wrote them at all periods of his life. The ballades are mostly early, the four virelais quite late. Changes in musical style from early to late works concern matters of detail, not large stylistic or formal considerations. Stepwise motion in all voices becomes more common, with the large and frequent leaps in the lower voices of early works smoothed out into melodic movement almost approaching that of the melody. Rhythmic structures become much more varied and flexible in all voices, with the impulse on the first beat of the bar – or, in Renaissance terms, on the first note of a perfection – weakened, and a wider range of note values used. Rhythmic activity intensifies at the approach to cadences, resulting in a stronger feeling of goal orientation.

7. SOURCES Dufay's fame is attested by the survival of his compositions in some 70 manuscripts from all countries in which polyphonic music was cultivated – Italy, France, Germany, Spain, Czechoslovakia – copied from the second decade of the 15th century through to the beginning of the 16th.

Several manuscripts are of particular interest and importance because they were copied in places he is known to have been, at approximately the time he was there. Two manuscripts now in Bologna (*I-Bc* Q15 and *Bu* 2216), unusually rich in pieces by Dufay, were copied in northern Italy in the third and fourth decades of the century, when he was in that region. Two others (*F-CA* 6 and 11), carefully and beautifully copied, contain a portion of the musical repertory of Cambrai Cathedral (including many pieces by Dufay) from around 1435, and may well date from the occasion of his visit to the city. Almost all his sacred music, excluding Mass Ordinary settings, is found in *I-MOe* 2 X 111 (for illustrations see HYMN, fig. 1, and SOURCES, MS, fig 39), a manuscript copied for the d'Este court in Ferrara about 1445 when Dufay's relations with this court were close. And it is possible that at least one gathering of a manuscript now in Brussels (*B-Br* 5557) was copied in Cambrai by the scribe Simon Mellet.

8. LOST WORKS AND POSSIBLE ATTRIBUTIONS. In all probability most of Dufay's works written before the middle of the century are known. A number of large manuscripts survive from this period, most of the pieces in them bearing composer ascriptions; among them are numerous concordances for Dufay's works, and newly discovered sources from this period have not recently added to the list of his known compositions. But many of the late works have not been discovered or identified. Manuscripts copied in the third quarter of the century, such as *I-Rvat* S Pietro B80, have a high percentage of anonymous works, some of which may be by Dufay.

A number of lost Dufay works can be named. His letter to Giovanni and Piero de' Medici written on 22 February 1454 mentions four laments for the fall of Constantinople, three of them for four voices: only one

of these survives (*O tres piteulx/Omnes amici*). Accounts for payments made by the Cambrai chapter to the copyist Simon Mellet mention Dufay's *Magnificat VII toni* (1462), his hymn *O quam glorifica 'nouvellement faite'* (1463), his *Séquence de la Magdelaine* (1464) and his *Missa de Requiem de novo compilata* (1470). Dufay's will mentions, as his own compositions, the Requiem Mass, the *Missa S Antonii de Padua*, the *Missa S Antonii Viennensis* and the motet *Ave regina celorum*, as well as other works for which his authorship is not definitely stated. Of all these, only the motet *Ave regina celorum* has been identified with any certainty: it appears anonymously in *I-Rvat* S Pietro B80 but shares material with the properly attributed *Missa 'Ave regina celorum'*. A *Missa S Antonii* of Dufay is three times quoted by Tinctoris, and Besseler identified the fragments in a cycle whose Kyrie is ascribed to Dufay and suggested that this is indeed the *Missa S Antonii Viennensis*; others however (De Van, in CMM, 1/2, 1948; Hamm, 1964; and Planchart, 1972) threw doubt on the unity of this cycle and thereby challenged not only its identification as the *Missa S Antonii Viennensis* but also its ascription to Dufay.

There can be no doubt that much of Dufay's music survives under the cloak of anonymity. The attribution of anonymous works to Dufay has become a popular pastime, one of the attractions of the sport being that it is difficult to prove, on stylistic grounds, that a particular anonymous piece is not in fact by Dufay. Zest is given to the game by the strong possibility that some Dufay works are indeed preserved as anonymous compositions. Most perplexing is perhaps Feininger's attribution of four Mass Ordinary cycles and no fewer than 11 Mass Proper cycles in *I-TRmn* 88 on the basis of a single ascription in another source; no full explanation of this was ever published. Besseler accepted the *Missa 'La mort de S Gothard'* into the complete edition but rejected the rest; Hamm firmly rejected all these on mensural grounds, but offered instead the attribution of the motet *Elizabeth Zacharie* on the basis of manuscript context and mensural practice. By far the most intriguing attribution is Plamenac's recognition of a tail at the top of a leaf in *F-Pn* 15123 as the descender of the 'y' of an ascription to Dufay cut off in binding; his consequent attribution of the song *Seigneur Leon* to Dufay has been universally accepted.

9. CONFLICTING AND QUESTIONED ASCRPTIONS. To judge between an ascription to Dufay and one to another composer can be difficult since Dufay's wide-ranging eclecticism makes stylistic criteria suspect. But many of the doubtful cases can be resolved with a fair degree of certainty on the basis of what is known of the manuscripts containing the conflicting ascriptions. *I-Bc* Q15 seems reliable; so *Veni dilecte mi*, ascribed there to Lymburgia and in *TRmn* 87 to Dufay, has been accepted as a work of the former; a Gloria (*Opera omnia*, iv, 15) ascribed (in *Bc* Q15 to Hugo de Lantins and in *GB-Ob* 213 to Dufay is thought to be the work of

Hugo; and the great *Magnificat sexti toni* ascribed in *I-Bc* Q15 and *MOe* α.X.1.11 to Dufay is considered genuine in spite of conflicting ascriptions to Dunstable and Binchois in other manuscripts. Similarly *Je ne vis oncques la pareille* is probably the work of Binchois, since it is ascribed to him in the reliable Chansonnier Nivelles de la Chaussée (*F-Pthibault*); and *Mon seul plaisir* must surely be by JOHANNES BEDYNGHAM to whom it is ascribed in *P-Pm* 714, a source whose compiler shows a deep knowledge of English music. But other cases present less easy solutions: *Departés vous, Malebouche* might well be by Ockeghem (*F-Pn* 15123) or by Dufay (*I-MC* 871), and Besseler's decision against Dufay could have been influenced by the errors in his transcription.

Dufay was so far the most eminent composer of his day that his name could well have been added to many works that are not his. Numerous ascriptions have been called into question. Perhaps the most famous, and a cause célèbre among studies of 15th-century music, is the *Missa 'Caput'*: its English style, its many English sources, its single unconvincing ascription in *I-TRmn* 88 and its highly uncharacteristic melodic style have led Walker (1969) and Planchart (1972) to question this work; but there is no general agreement, and alignment for or against the authenticity of the mass can radically alter one's attitude not only towards Dufay's own work but towards the whole question of English music on the Continent in the middle of the 15th century. Similarly M. Bent (1980) suggested English origin for the ballades *Je languis* and *Or me veult*, and Monson (1975) argued the same for a Kyrie (*Opera omnia*, iv, 72). Less tendentious, because less concerned with the central evolution of 15th-century music, is Dèzes' thesis that the *Salve regina* (ascribed in *D-Mbs* 3154) must be the work of a German composer, because of its sources and its heavily Germanic style. Finally, several works have been dismissed either because they were so gauche (*O gloriose tyro/Divine pastus*, first questioned by De Van in CMM, 1/2, 1948) or because their style was so distant from that of Dufay (*Le serviteur*, questioned by Besseler). But however convincing the arguments may seem, they ultimately juggle with so many unknowns that the best course will always be caution.

10. EDITIONS. It was not until the middle of the 19th century that some of Dufay's compositions were printed, in musicological works by such scholars as Kiesewetter, Rochlitz and Ambros. More transcriptions appeared in Haberl's monumental monograph on Dufay, in several volumes of *Denkmäler der Tonkunst in Österreich* devoted to music found in the Trent manuscripts, and in Stainer's *Dufay and his Contemporaries* (1898). His *opera omnia* was the first publication undertaken by the American Institute of Musicology. Guillaume de Van, the first editor, brought out the non-isorhythmic motets (i, 1947), the isorhythmic motets (ii, 1948, with very important prefatory material) and two masses (iii, iv, 1949). After his death Besseler assumed the editorship, re-editing the early volumes and completing the set in 1966.

WORKS

Edition *G Dufay Opera omnia*, ed G de Van and H. Besseler, CMM, 1/1-6 (1947-9, 1951-66) [with important introductions to each vol]

, Colonna,	Missa de S Georgi		common of a martyr not a bishop, int (In virtute tua, 'Gloria Patri' for 4vv), int (Protexisti me Deum), all (Alleluia, Posuisti Domine), tract (Desiderium anime ejus), off (In virtute tua), off (Confitebuntur celi), comm (Posuisti Domine in capite), comm (Letabitur justus), chants paraphrased in S, <i>TRmn</i> 88; ed L. Feininger. Monumenta polyphoniae liturgicae, 2nd ser., i (Rome, 1947), 84, attrib. Dufay by Feininger, rejected by Hamm (1964, pp 131ff)
3), no 255	Missa de S Joanne Baptista		for feast of St John the Baptist, int (De ventre matris), grad (Priusquam te formarem), all (Alleluia, Tu puer), off (Justus ut palma), comm (Tu puer); chants paraphrased in S, <i>TRmn</i> 88, ed L. Feininger. Monumenta polyphoniae liturgicae, 2nd ser., i (Rome, 1947), 58, attrib. Dufay by Feininger, rejected by Hamm (1964, pp 131ff)
	Missa de S Mauritiu et sociorum		common of several martyrs, int (Venite benedicti), int (Sapientiam sanctorum), grad (Gloriosus Deus), all (Alleluia, Judicabunt sancti), off (Mirabilis Deus in sanctis, for 4vv), comm (Gaudeat justus in Domine), chants paraphrased in S, <i>TRmn</i> 88, ed L. Feininger. Monumenta polyphoniae liturgicae, 2nd ser., i (Rome, 1947), 108; attrib. Dufay by Feininger, rejected by Hamm (1964, pp 131ff)
i Gl 1), but	Missa de S Sebastiani		for feast of St Sebastian, int (Letabitur justus in Domino), grad (Posuisti Domine), all (Alleluia, Sebastiani gracia fide), off (Gloria et honore), comm (Magna est gloria), chants paraphrased in T, S; <i>TRmn</i> 88; ed L. Feininger. Monumenta polyphoniae liturgicae, 2nd ser., i (Rome, 1947), 166, attrib. Dufay by Feininger, rejected by Hamm (1964, pp 131ff)
, by him	Missa de Ss Trinitate		for Trinity Sunday, int (Benedicta sit Sancta Trinitas, 'Gloria Patri' for 4vv), grad (Benedictus es Domine), all (Alleluia, Benedictus es), all (Alleluia, Verbo Domini), off (Benedictus sit Deus Pater), comm (Benedicite Deum celi); chants paraphrased in S, <i>TRmn</i> 88, ed L. Feininger. Monumenta polyphoniae liturgicae, 2nd ser., i (Rome, 1947), 16, attrib. Dufay by Feininger, rejected by Hamm (1964, pp 131ff)
anon stylistic	Missa de Spiritu Sancto		for Whitsunday; int (Spiritus Domini replevit), grad (Beata gens), all (Alleluia, Emitte Spiritum), all (Alleluia, Veni Sancte Spiritus, see main list), off (Confirma hoc Deus), comm (Factus est repente), int (Dum sanctificatus fuero), chants paraphrased in S, <i>TRmn</i> 88, ed L. Feininger. Monumenta polyphoniae liturgicae, 2nd ser., i (Rome, 1947), 1; attrib. Dufay by Feininger; only Alleluia, Veni Sancte Spiritus (in a different form attrib. Dufay in <i>TRmn</i> 90) accepted by Besseler (B ii, pp.1 f) and Hamm (1964, pp 131ff); all, off accepted by Planchart (who cited a letter by Spataro in support of the off attrib.), but he also considered that int, grad, comm, perhaps by Dufay (1972, pp 15f)
obably	Missa 'La mort de St Gothard'	ii, 105	c.f. Fr chanson in T; attrib. Dufay by Feininger, accepted by Besseler (B ii, pp.1 f, ii, p.ii), questioned by Hamm (1964, p 147), rejected by Nitschke (pp 292-374) and Planchart (1972, p 19)
st) in stylistic	Missa 'Puis que je vis'		c.f. from anon chanson in Fr 2356 in T; <i>Rvat</i> C.S. 14, ed L. Feininger. Monumenta polyphoniae liturgicae, 1st ser., ii/4 (Rome, 1925), no 2, attrib. Dufay by Feininger, and Llorens (p.20), rejected by Besseler (B iii, p.ii)
povert	Missa 'Veterem hominem'		c.f. ant. Lauds, Octave of Epiphany, <i>TRmn</i> 88, ed L. Feininger. Monumenta polyphoniae liturgicae, 1st ser., ii/1 (Rome, 1951), no 2, attrib. Dufay by Feininger, rejected by Besseler (B iii, p.ii), Planchart (1972, p 19), Harrison (<i>Music in Medieval Britain</i> , 2 nd 1963, p.253) and Sparks (p 135) stated that the composer of this mass was English, citing evidence of T. Morley
rs. in xviii	Missa votiva de angelis		int (Benedicite Dominum), grad (Benedicite Dominum), all (Alleluia, In conspectu angelorum), all (Alleluia, Laudate Deum), off (Stetit angelus), comm (Benedicite omnes angeli), chants paraphrased in S; <i>TRmn</i> 88; ed L. Feininger. Monumenta polyphoniae liturgicae, 2nd ser., i (Rome, 1947), 69, attrib. Dufay by Feininger, rejected by Hamm (1964, pp 131ff)
M, 1st ser			

Title	No. of vv	Edn	Remarks
Anima mea liquefacta est Stirps Jesse	3		<i>Rvat</i> C.S. 15; ed. A. Smijers, <i>Van Ockeghem tot Sweelinck</i> , i (Amsterdam, 2/1952), 22; attrib. Dufay by Llorens (p.28); correctly attrib. Busnois in <i>B-Br</i> 5557
Deus, tuorum militum	3	v, 144	hymn, feast of a martyr; Dufay's melody (see main list) in anon. setting; chant paraphrased in S; attrib. Dufay by Llorens (p.24), rejected by Besseler; see also Gerber (1955)
Deus, tuorum militum	3	v, 145	hymn, feast of a martyr; Dufay's melody (see main list) in anon. setting; chant paraphrased in S; attrib. Dufay by Hamm (1960, p.53), rejected by Besseler; see also Gerber (1955)
Elizabeth Zacharie/Elizabet	4		isorhythmic motet, <i>I-TRmn</i> 87, ed. in DTÖ, lxxvi, Jg.xl (1960), 16; attrib. Dufay by Hamm (1964, pp.70f)
Iste confessor Domini sacratu	3	v, 146	hymn, feast of a confessor, Dufay's melody (see main list) in anon. setting; chant paraphrased in S; attrib. Dufay by Llorens (p.24), rejected by Besseler; see also Gerber (1955)
Jesu, corona virginum	4	v, 147	hymn, feast of a virgin; Dufay's melody (see main list) in anon. setting; chant paraphrased in S; attrib. Dufay by Llorens (p.24), rejected by Besseler; see also Gerber (1955)
Letabundus exultet fidelis chorus	3		seq. Christmas, <i>TRmn</i> 92, ff 69v-70, chant paraphrased in T; attrib. Dufay by Hamm (1964, pp.77f)
Lumen ad revelationem . Nunc dimittis	4		ant. Blessing of the Candles, Purification of BVM, <i>Rvat</i> C.S. 46; attrib. Dufay by Llorens (p.25)
Magnificat sexti toni	4		<i>Rvat</i> C.S. 15, attrib. Dufay by Llorens (p.25)
Magnificat septimi toni	3		<i>Rvat</i> S Pietro B80, attrib. Dufay by Hamm (1960, pp.44f), rejected by Besseler (B v, p.iii)
Mittit ad virginem			seq. Annunciation, <i>TRmn</i> 92, <i>Bc</i> Q15, attrib. Dufay by Hamm (1964, p.78)
Nunc dimittis [see Lumen ad revelationem]			
O sidus Yspanie	5		ant. in honour of St Anthony of Padua, <i>TRmn</i> 88, ed. in DTÖ, lxxvi, Jg.xl (1960), 75, attrib. Dufay by Hamm (1964, p.138), Besseler believed it to be by an anon. composer following It. models (1950, p.169f)
Sancti Spiritus assit			seq. Whitsunday, <i>TRmn</i> 92, attrib. Dufay by Hamm (1964, p.78)
Sanctorum meritis inclita gaudia	4		hymn, feast of more than one martyr, <i>Rvat</i> C.S. 15; Dufay's melody (see main list) in anon. setting; chant paraphrased in S; attrib. Dufay by Llorens (p.24); see also Gerber (1955)
Urbs beata Jerusalem	4	v, 141	hymn, dedication of a church, Dufay's melody (see main list) in anon. setting; chant paraphrased in S; attrib. Dufay by Llorens (p.24), rejected by Besseler; see also Gerber (1955)
Vexilla Regis prodeunt	3	v, 138	Passiontide hymn, variant version of Dufay's melody (see main list) in anon. setting; chant paraphrased in S; attrib. Dufay by Llorens (p.22), rejected by Besseler; see also Gerber (1955)
J'ayme bien celui qui s'en va	4	vi, 102	rondeau, Besseler suggested that Dufay added the Ct. trompette to Pierre Fontaine's 3vv setting (see B vi, p.xii, and 'Die Entstehung der Posaune', <i>AcM</i> , xxii, 1950, pp.30f), however, V. Safowitz (<i>Trumpet Music and Trumpet Style in the Early Renaissance</i> , diss. U. of Illinois, 1965) attributed it to Binchois
Seigneur Leon, vous soyés bienvenus	4	vi, 101	rondeau, c f. from Bv, Missa de angelis in T, attrib. Dufay by Plamenac (1954) accepted by Besseler and A. B. Scott (pp.157ff)

Duff. See TAMBOURINE.

Duffalo, Richard (John) (b Chicago, 30 Jan 1933). American conductor and clarinetist. A graduate of the American Conservatory of Music in Chicago and the University of California, he was associate conductor of the Buffalo PO, 1962-6, and was also active as clarinetist of the Creative Associates at the New York State University at Buffalo, performing a great deal of new music. In 1965 he studied with William Steinberg at the New York Philharmonic Seminar for conductors, which led to invitations to conduct the orchestra and also Steinberg's Pittsburgh SO. He worked with Boulez in Basle, and made his European début with the Paris Radio Orchestra in 1971. His reputation as an inter-

preter of new scores was consolidated with performances of Stockhausen's *Carré* for four orchestras (with fellow conductors Tabachnik, Amy and Fiss) in The Hague, Paris and London in 1972. Successful débuts with the Concertgebouw Orchestra (1975) and Berlin PO (1976) have confirmed his ability to deal with 20th-century works in an incisive, cogent way. Duffalo was artistic director of the Contemporary Music Conference at the Aspen Festival from 1970, and joined the staff of the Juilliard School (1972) where he presents a number of concerts each year with the Juilliard Ensemble. He has given the American premières of works by Xenakis, Maxwell Davies, Crumb, Carter and Copland, and has introduced works by Ruggles, Ives, Varèse and Druckman in Europe. His operatic activities include *Boris Godunov* at the Cincinnati Opera, *Il trittico* at New York City Opera, and the directorship of the short-lived 'Mini-Met' season in 1973. Duffalo's approach, unlike many new music specialists, is dramatic rather than structural. His experience as a clarinetist and ensemble player enables him to deal with instrumental problems in a practical way, and his projection of each score strives for the clearest emotional as well as musical impact.

RICHARD BERNAS

Duffy, Jacques. See DUPHLY, JACQUES.

Dufon [Du Fon], **Jean** [Jean de Namur] (b Namur, baptized 27 Sept 1574; d Namur, between 15 May and 7 June 1634). South Netherlands composer and singer. He was a chorister at St Aubin, Namur, and at the age of 11 was recruited as a chorister to serve the court of Philip II of Spain. He arrived in Madrid at the beginning of 1586 accompanied by 13 other boy sopranos, among them Gery Ghersem, Mathieu Rosmarin (Mateo Romero), Philippe Dubois, Nicolas Dupont and Jean de Loncin. He studied singing and composition there with Philippe Rogier. When his training was completed on 1 December 1593, he was elevated to the rank of royal cantor. He was by then generally known as Jean de Namur. On the death of Philip II he remained in the service of Philip III as cantor and composer and accompanied him to Valladolid, where the court resided from 1601 to 1606. It was during this time - probably in 1605 - that he succeeded Ghersem as vice-maestro de capilla of the royal chapel. He was highly regarded at court and according to Gaspar de Arratia, a copyist at the royal chapel, was 'a composer of such skill that he could have directed any chapel he chose in Spain at the beginning of the 17th century'. On 14 August 1606, after being allowed to return to the Netherlands on health grounds, he left Spain and settled at Namur. He was a priest and held a prebend at Ivoix between 1604 and 1620, and after 1605 he drew an ecclesiastical pension from the bishopric of Córdoba.

The catalogue of the library of King John IV of Portugal, destroyed in the Lisbon earthquake of 1755, records several works by him: an eight-part mass; four other sacred works, one for five voices, the others for eight, among the latter being one that can apparently, from another reference, be dated 1597 or earlier; and eight pieces to French texts, probably chansons, of which five are known to have been for five voices.

PAUL BECQUART

Dufourcq, Norbert (b St Jean-de-Braye, Loiret, 21 Sept 1904). French musicologist and organist. The son of Albert Dufourcq, professor of medieval history at the University of Bordeaux, he studied at the Sorbonne (1921-3), taking a degree in history and geography in 1923, and then at the Ecole Nationale des Chartes (1924-8), where he qualified as an archivist-palaeographer. He also studied the piano and music history under Gastoué (1913-20), the organ with André Marchal (1920-40) and harmony, counterpoint and fugue with Marie-Rose Hublé. He took the doctorat ès lettres at the University of Paris in 1935 with a dissertation on the organ in France from the 13th century to the 18th. He taught history at the Collège Stanislas in Paris (1935-46) and from 1941 to 1975, succeeding Maurice Emmanuel, was professor of music history and musicology at the Paris Conservatoire. He also taught in other establishments in Paris (Sweet Briar College from 1949, Ecole Normale de Musique 1957-63, the Sorbonne 1971) and in Canada (Camp Musical du Mont Orford 1959-65, Laval University of Quebec 1967).

Dufourcq's musicological interests are French music, J. S. Bach and, in particular, the organ; he is a great defender, not without opposition, of the neo-classical organ, his ambition being 'for all musical styles to be represented on it, from Paumann to Jehan Alain'. He was appointed resident organist on the great organ at St Merry in 1923, and, from 1926, secretary and then vice-president of the Amis de l'Orgue society, and was one of the founders (1932) of the Commission des Orgues des Monuments Historiques. He has published, both in performing and scholarly editions, works for organ and harpsichord by numerous French composers of the 17th and 18th centuries (Boëly, François Couperin, Clérambault, Corrette, Daquin, De Grigny, Dornel, Jullien, Lanes, Lebègue, Nivers, Raison, Titelouze).

Dufourcq has contributed to many journals in France, Germany, England, Italy, Belgium and the Netherlands; in 1928 he became executive secretary of Larousse dictionaries (history, arts and music sections), editing several volumes himself. He is the editor of *L'orgue*, *Orgue et liturgie*, *Les grandes heures de l'orgue* and *Recherches sur la musique française classique*. He was president of the Société Française de Musicologie (1957-9) and of the Société de l'Ecole des Chartes (1975-6), and had considerable influence through his writings and teaching.

CHRISTIANE SPIETH-WEISSENBACHER

Dugazon [Gourgaud], (Alexandre-Louis-)Gustave (b Paris, ?1782; d Paris, ?1826). French composer, son of the soprano Louise-Rosalie Dugazon. He studied harmony with Berton and composition with Gossec at the Paris Conservatoire. In 1806 he won second prize in the Prix de Rome for his cantata *Héro et Léandre Le voisinage* (1800), a collaboration with Bertaud, Dubuat, Pradher and Quinebaud, was his first dramatic work. He wrote three other operas and four ballets, none of which was successful. He also published vocal pieces, including several romances and nocturnes, and various chamber and piano works.

WORKS

STAGE

(all first performed in Paris)

Le voisinage (opéra comique, 1, J. B. Pujoux), Théâtre Favart, 24 Jan

1800, collab. Bertaud, Dubuat, Pradher, Quinebaud

Le chevalier d'industrie (opéra comique, 1, J. M. B. Saint-Victor)

Théâtre Feydeau, 16 Nov 1804, collab. Pradher

Marguerite de Waldemar (opéra comique, 3, Saint-Félix), Théâtre Feydeau, 12 Dec 1812

La noce écossaïse (opéra comique, 1, T. M. Dumersan), Théâtre Feydeau, 19 Nov 1814

Les fiancés de Caserte, ou *L'échange des roses* (ballet, 1, P.-G. Gardel and L.-J. J. Milon), Opéra, 17 Sept 1817

Alfred le Grand (ballet-pantomime, 3, J.-P. Aumer), Opéra, 18 Sept 1822, adaptation of W. R. von Gallenberg, arr. pf (Paris, ?1822)

Aline, reine de Golconde (ballet-pantomime, 2, J.-P. Aumer), Opéra 1 Oct 1823, adaptation of ballet by P.-A. Monsigny and opera by H.-M. Berton

Néomi (ballet), Théâtre de la Porte Saint-Martin, before 1807, mentioned by Fétis

OTHER WORKS

(all published in Paris)

Vocal. many collections of nocturnes, 2vv, pf and romances, mentioned

by Fétis, romances publ separately
 Inst: many variations, pf, vn, vc, airs and nocturnes, hn, pf, duets, harp,
 pf
 Kbd fantasies, airs, preludes, toccatas, variations, dances

LELAND FOX

Dugazon [née Lefebvre], **Louise-Rosalie** (b Berlin, 18 June 1755; d Paris, 22 Sept 1821). French soprano, sister of the violinist Joseph Lefebvre. The daughter of François-Jacques Lefebvre, who danced professionally in Berlin and Paris, she first appeared as a dancer at the Comédie-Italienne in 1767. Her singing career began when Grétry included an ariette for her in *Lucile* (1769); she made her mature début as Pauline in Grétry's *Silvain* on 19 June 1774. She married the actor Jean-Baptiste-Henri Gourgaud, called Dugazon, in 1776. Although they were separated within three years and later divorced (1794), she continued to use the name Dugazon. From 1792 to December 1794 she found it politically expedient to retire from the Parisian stage. Her last public performance was on 29 February 1804 when the main performing troupes in Paris collaborated on a benefit for her at the Opéra.

Mme Dugazon was one of the most popular singers at the Opéra-Comique, where she created some 60 roles, among them Dalayrac's Nina. Though untrained in music, her natural dramatic talents gave her singing an expressiveness and versatility that was highly acclaimed. When she began to lose her figure she renounced romantic roles to play young matrons; the terms 'jeunes Dugazons' and 'mères Dugazons' are still used for these types of roles. Three of her sisters also danced and sang at the Comédie-Italienne.

LELAND FOX

Du Grain [du Grain], **Jean** [Dügren, Johann Jeremias] (d? Danzig, 19 Jan 1756 or after 1765). ?French singer, keyboard player and composer, resident in Germany. He was probably related to French immigrants whose names appear frequently in the city records of Danzig. He is first mentioned at Hamburg in 1730 as a soloist in cantatas by Telemann performed to commemorate the Augsburg Confession; he was almost certainly Telemann's pupil. From 1732 he lived in Elbing (now Elbląg, Poland) where he was a singer, organist and harpsichord player. In 1737 he was enjoined ('injungeret'), presumably as an assistant, to the organist of the Marienkirche Daniel Dibe; his name appears in the church accounts from 1737 to 1739. Among his compositions for Elbing were a *St Matthew Passion* (1737), performed annually until the 19th century, and the lost cantata *Hermann von Balcke*, written to celebrate the 500th anniversary of the city; the latter contained recitatives and some arias by Du Grain and arias from operas by Handel who helped to compile the work, but

who left Elbing before the performance.

In 1739 Du Grain left Elbing for Danzig where he performed his *Der Winter, a dramma per musica*, at a private concert on 23 February 1740. Other concerts in 1740 included works by Telemann, in 1743 Handel's *Brookes Passion*, and in 1748 a revival of *Der Winter*. He served as organist at St Elisabeth, Danzig, probably from 1747 as F. G. Gleimann's successor. In 1748 he published a supplement to the Danzig Reformed Church hymnbook (1744), with the figured bass realized for organ and including five new melodies of his own. According to Muttray an entry in the register of deaths of St Elisabeth read 'begraben 1756.19.1 Johann Jeremias Dügren, gewessener Organist'. The register is now lost, but the entry may refer to one of Du Grain's sons since Reichardt stated that Du Grain visited Königsberg in 1765.

Du Grain's music shows the strong influence of Telemann. Döring spoke of the 'simple and yet noble melodies' of the *St Matthew Passion*, and considered the characterization dramatic; the choruses are for two voices like those of Telemann's *St Matthew Passion* of 1730. Du Grain's surviving cantatas display the pattern of a large-scale opening choral movement, sometimes based on a chorale melody, followed by alternating recitatives and solo arias and sometimes closing with a chorale setting. He appears to have been a composer of some craft but limited musical imagination.

WORKS

Kirchen-Gesang-Buch der Evangelisch-Reformirten Gemeinde in Danzig (Danzig, 2/1748), lost [according to Muttray incl org acc and 5 new melodies by Du Grain]

Passions Domini nostri Jesu Christi secundum Matthaeum Evangelium, Elbing, 1737, Elbląg, Marienbibliothek (according to Eitner)

Hermann von Balcke (cantata for 500th anniversary of Elbing, G. D. Seyles), Elbing, 28 Nov 1737, music lost [recits and some arias by Du Grain, also incl arias from operas by Handel]

Der Winter (dramma per musica, B. H. Brockes), Danzig, 23 Feb 1740, lost (2 arias formerly in Hans Michel Schlettner's private collection, Augsburg, according to Eitner)

Cantata zum Preussischen Dankfeste, Elbląg, Marienbibliothek (according to Eitner)

Herzlich lieb hab ich dich, O Herr (cantata), Danzig, 24 Sept 1740, Willkommen Erlöser (Christmas cantata), 1v, chorus 4vv, 2 tpt, 2 ob, 2 vn va, bc, cd in F Kessler *Danziger Kirchen-Musik Vokalwerke des 16 bis 18 Jahrhunderts* (Stuttgart, 1973), 2 other cantatas, Mitten wir im Leben sind (funeral music for Jungschultz), partial edn in Müller-Blattau (1931) *PI-GD*

Dujardin, Marbrianus. See ORTO, MARBRIANUS DE

Dukas, Paul (Abraham) (b Paris, 1 Oct 1865; d Paris, 17 May 1935). French composer, music critic and teacher. His high ideals account for both the solidity of his reputation and the small number of major works he allowed to be published. Conservative by temperament, he cultivated musical craftsmanship to an extreme degree, and his orchestration in particular has been widely admired and imitated. His voluminous work as a critic reflects unusual breadth of creative sympathy and cultural outlook. He was a conscientious editor of music by Beethoven, Rameau, Couperin and Scarlatti, and his career included two periods of teaching (respectively orchestration and composition) at the Paris Conservatoire

1 Up to 'L'apprenti sorcier' 2 Later career

1. UP TO 'L'APPRENTI SORCIER'. Dukas' mother was an extremely gifted musician who, but for parental intervention, could have made a career as a concert pianist. She died when her son was in his fifth year, however, and until he was 50 his closest ties were with his father Jules and his elder brother Adrien, both of whom worked as bankers and took a lively interest in cultural matters. Adrien's sudden death in 1908 robbed Paul of 'another self'. Shortly after his father's death late in 1915, the composer married Suzanne Pereyra, who bore him a daughter in 1919.

Though claiming to have been such a musical infant that he 'gave suck in 9/8 time', Dukas did not show any particular aptitude until about the age of 13, when in supererogation to the usual round of piano lessons and practice he began to compose. At 16 he attended the Conservatoire for both the harmony class of Théodore Dubois and the piano class of Georges Mathias. His interest in orchestration was furthered not only by visits to concerts but also by playing the timpani in the Conservatoire orchestra. In 1883 he composed an overture based on *King Lear*, and in the following year another based on *Götz von Berlichingen*, and this he was fortunate enough to hear in a private performance in Geneva.

At this time he joined Guiraud's composition class at the Conservatoire; Debussy, about to leave for Rome, became a friend. Other friendships ensued from his enthusiasm for Wagner: with d'Indy, Bordes and Edouard Dujardin (the novelist Joyce was to acknowledge him as an important precursor). In 1886 and 1887 Dukas got no further than the preliminary round of the Prix de Rome competition, but in the following years he was a serious contender and wrote the statutory cantatas (*Vellèda*, 1888, and *Sémélé*, 1889); with the former he came within one vote of winning the prize, but in 1889 no award was made. At this point he left the Conservatoire, and for rather more than a year gave himself up to military service. 'Returning to work', as he put it, in 1891, he composed his first major work: the overture *Polyeucte* was completed on 15 September and first performed at the Lamoureux concerts on 23 January 1892.

Polyeucte, an impressively solid piece of work, tells a great deal about the composer's personality. The noble aspirations expressed in Corneille's 'Christian tragedy' appealed strongly to a musician whose idols were Wagner and Franck. The stormy *allegro* sections echo the orchestration of *Der fliegende Holländer*, and the first subject group includes a Wagnerian chordal theme (an anticipation of Iskender's theme in *La pèri*). The work's skilful thematic transformations look back beyond Franck to Liszt, but there is plenty of the Belgian's bland insistence on motivic 'interest' (which rapidly becomes a misnomer, particularly in the closing Adagio tranquillo). A third idol is invoked at the opening of the Allegro, powerfully suggestive of Beethoven's *Coriolan*. The work has much of real beauty and arresting sonority. What is disconcerting is that Dukas invested his borrowings with so little character of his own; yet there is a peculiar thoughtfulness and a firm tendency to symmetry.

In 1892 Dukas began to write for the *Revue hebdomadaire*, some of his earliest reports being of Wagner productions in London, two years later he did his first reviews for the *Gazette des beaux-arts* and the *Chronique des arts et de la curiosité*. His first attempt at opera, *Horn et Rimenhild*, got no further than the first of its projected three acts, though Dukas had composed the entire libretto himself. As it turned out his first theatrical venture was as orchestrator of the first three acts of Guiraud's unfinished *Frédégonde*, the last two acts were the work of Saint-Saëns, who had invited Dukas' collaboration and to whom Dukas later dedicated his Piano Sonata. It was Saint-Saëns, too, who was in charge of the publisher Durand's new Rameau edition, which he began in 1895 and to which Dukas later made important contributions. 1895 was also the date when Dukas started work on his three-movement Symphony in C, the first performance of which took place on 3 January 1897.

The Symphony belongs to the joyful, affirmative class of work that is all too easily underestimated. Although not untouched by the influences of Franck, Chausson and d'Indy, its affinities are more strikingly with the extrovert tradition of Bizet, Lalo and Saint-Saëns; yet in power and beauty of thought it often transcends those composers, calling to mind Beethoven and, in the slow movement, Schumann. The orchestration is once again masterly, and the Andante shows a new trend towards delicate, atmospheric effects; the suggestion here of

Romantic opera prompts the speculation that this movement was in some sense indebted to his work on *Horn et Rimenhild*: certainly it paves the way for many a passage in *Ariane et Barbe-bleue*. The solidity of the work extends to the construction of its very themes. Many are of regular four- or eight-bar phrases, and the triadic skeleton on which the outer movements' principal themes are built is firmly stressed. Indeed, in its insistence on tonic downbeats the work's opening theme anticipates *L'apprenti sorcier* (see ex.1), which had its première on 18 May of the same year.

This 'symphonic scherzo after a ballade of Goethe', not quite imaginable as the Symphony's missing scherzo, carries that work's tendency towards symmetry to an extreme point. Dukas' opening theme decorates the notes of the diminished 7th chord; and the later 'conjunction motif' treats the chord of the augmented major triad as an appoggiatura resolving only on to a further harmony of that ilk. Both these chords are perfectly symmetrical, hence somewhat impersonal 'atonal' harmonies, and Dukas' use of them in *L'apprenti sorcier* clearly influenced such later works as Stravinsky's *Fireworks* (1908) and Debussy's *Jeux* (1912). In conjunction with the emphasized tonic of the main theme, they aptly suggest the inexorable outcome of the apprentice's spell. The rhythmic construction of that theme shows the composer's skill in gradually building up a steady flow of movement. In ex 1, *a*, *b* and *c* refer to

progressively more continuous patterns within each bar; *V*, *W*, *X*, *Y* and *Z* designate the cumulative structure of three-bar units; and if the 'true' time signature is taken as 9/8, the downbeat tonic emphasis emerges clearly. In a subjoined secondary theme, further three-bar patterns appear from the combinations *b-c²-b*, *b¹-b¹-b¹*, *b¹-c¹-c*, *c¹-c²-a* (the superscript 2 indicates a double appoggia-

Paul Dukas

tura on the first beat). The work owes its resounding success partly to the aplomb with which it illustrates its programme, partly to its taut, Beethovenian construction, and partly, inevitably, to its dazzling orchestration, which succeeds in carrying further the excitement engendered by Wagner's *Valkyries*.

2. LATER CAREER. In 1899 Dukas was once again working on an opera to a text of his own, *L'arbre de science*, a 'Hindu legend'. This was abandoned when he obtained Maeterlinck's consent to use the text of *Ariane et Barbe-bleue* (which at one stage, it seems, might have gone to Grieg). In a letter to Durand (24 July 1899), the composer, presumably referring to this permission, promised the publisher 'great news'; he reported progress on Rameau's *Les indes galantes* which he had now begun to edit, he spoke of his Piano Sonata, the composition of which was well under way; and he hinted at a 'mysterious, first-rate' new project, which could conceivably already be his *Variations, interlude et final sur un thème de Rameau*.

The Sonata, first performed on 10 May 1901, and the Rameau variations (23 March 1903) are among the most ambitious works in the repertory of French piano music: the former a work of full-blooded romanticism, the latter reflecting the classical side of its composer's nature, a side already suggested by the Symphony's first movement, and later to return in his *Villanelle* and *Sonnet de Ronsard*. Dukas had specially studied Beethoven's last sonatas, and their impact is felt not only in such gestures as the dark, mysterious fugue which is enclosed by the work's scherzo (recalling the guitar imitations of Albéniz, a friend of Dukas), but also in both works' passages of complex metrical sub-

division. Franck is another model, in form, pianistic style and (at least in the Sonata with its characteristic flattened-6th appoggiaturas) musical language. The variations cover an astonishing range of expression, and can bear comparison with the Brahms-Handel set which in some ways they resemble. Ex.2 shows how, in rapid succession and without incompatibility, a rich Franckian sequence may be followed by a rare hint of Dukas' Judaic background.

Ex 2

The Variations have a special importance in the composer's evolution: they heralded a new formal direction and extended his technique in readiness for the important variation-based sections of *Ariane et Barbe-bleue* ('Scène des joyaux') and *La pèri* ('Danse de la pèri'). The Maeterlinck opera has sometimes been considered Dukas' masterpiece. It moves away from the Beethovenian inspiration of his earlier works, relying on extremely well-handled Wagnerian techniques. As in *L'apprenti sorcier* Dukas showed a liking for playing off firmly diatonic themes and harmonies against ideas based rather on the whole-tone scale or on some more internal regularity, as with the alternating major and minor 3rds heard in the prelude to Act 3. At its best this approach yields an imposing air of impersonality, even universality, but it can also seem arbitrary. The work's harmony and orchestration were much admired abroad, and its impact on such composers as Schreker, Schoenberg and Berg was considerable.

La pèri shares with Debussy's slightly later *Jeux* the designation 'poème dansé', and in Dukas' case the implication seems to be that the work is a single-movement programmatic piece ('poem') based on dance forms rather than symphonic ones. The formal continuity is superbly managed, abetted by a predominance of triple and compound time: these features again seem to have impressed Debussy. One finds again the thematic importance of the diminished 7th chord both in simple

melodic lines and as a basis for sequences of parallel chords (in the fanfare and in Iskender's theme); and insistently stressed notes are again essential (the supertonic in the fanfare and the Peri's theme; the mediant, recalling the Sonata's finale, in Iskender's theme and the theme of the 'Danse de la pèri').

Thus Dukas' tools remained basically simple to the end. For, apart from two minor works, *La pèri* was the last composition he published: he had written even that work 'for a bet', and was persuaded not to destroy it by the insistence of friends, adding the popular fanfare as an afterthought. Of his smaller works, the *Villanelle* for horn and piano (1906), with its tinges of Strauss, has deservedly remained popular, and *La plainte, au loin, du faune* ... for piano (1920), written in memory of Debussy, contains harmonic explorations of remarkable sensitivity. The *Prélude élégiaque* for piano (on the name of Haydn, 1908), though thoroughly steeped in Debussy's pianistic style, is of lesser interest, as are the vocal pieces *Vocalise-étude (alla gitana)* (1909) and *Sonnet de Ronsard* (1924). Several major projects were undertaken and probably completed between the composition of *Ariane et Barbe-bleue* and Dukas' death in 1935, only *La pèri* survived. Meanwhile he taught orchestration at the Conservatoire (1910-13), was appointed inspector of musical education in the provincial conservatories (1912), returned to the Conservatoire to teach composition (1928) and was elected to the Académie des Beaux Arts (1934).

It is reasonable to suppose that Dukas' long silence reflected a dissatisfaction with some aspect of his work not visible to those friends to whom he showed the compositions he later destroyed. This suggests that he had ceased to experience a sense of creative excitement such as would have sustained his more youthful work; he had perhaps become too much the master of his craft, having set himself, and met, great challenges but lost his relish for fresh discoveries. Possibly he hoped to win back some of his youthful enthusiasm when he married his letter to Dujardin of 9 September 1916 could suggest this. The music he left reflects the more wholesome aspect of his perfectionist temperament: the pedantry, the impatience and the inflexible whims (such as his refusal to allow any portrait of him to be published) are left to the private life and correspondence. Dukas' poetic range was relatively restricted; but he possessed the force and determination to make certain his music would endure.

WORKS

SURVIVING WORKS

- Hymne au soleil (Delavignac), chorus 4vv, orch, unpubd
- Velleda (Beissier), cantata, 3 solo vv, orch, 1888, unpubd
- Sémélé (Adénis), cantata, 3 solo vv, orch, 1889, unpubd
- Polyeucte, ov. after Corneille, orch, 1891
- Symphony, C, orch, 1895-6

G. W. HOPKINS

Dukát, Josef Leopold Václav (b Prostějov, 12 March 1684, d Želiv, 4 June 1717). Czech composer. He received his musical education, or supplemented it, under the Jesuits at Olomouc, and subsequently held the post of organist and choirmaster at the Premonstratensian monastery of Želiv until his death. His unpublished *Cithara nova . . . seu duodena sacrarum cantuum* (1707, autograph MS, CS-Pnm) is clearly the work of a composer of the high Baroque period. It contains 12 cantatas, for solo voice, with two violins and organ continuo. A Mass in B \flat and a *Pange lingua*, both for four voices and orchestra, are also extant (CS-Pnm); as the *Pange lingua* is scored for a large orchestra including clarinets, it is almost certainly a later reworking of Dukát's original composition. He also composed masses in honour of St John Nepomuk, St Florian and St Wenceslas (recorded at Osek monastery, 1733), and the Czech Christmas pastoral, *Do Betlému chvátejme* ('Let us haste to Bethlehem', catalogued at the Jesuit College, Uherské Hradiště, 1730).

JOHN CLAPHAM

Duke, John Woods (b Cumberland, Maryland, 30 July 1899). American composer and pianist. He studied the piano and composition with Randolph and Strube at the Peabody Conservatory, Baltimore (1915-18), continuing with Cannon in New York and with Schnabel and Boulanger in Europe (1929-30). From 1923 to 1967 he taught at Smith College, where he retired as professor of music. His most important contribution was in

the field of song, in which his style became more conventional after the experiments of the 1920s and 1930s.

RUTH FRIEDBERG

Duke, Richard (fl London, c1750-85). English violin maker. He was apparently regarded as the best in London by contemporary musical society. Attempts during the 19th century to unearth something of the background of this talented craftsman were unsuccessful. He flourished as early as the 1750s, having perhaps been a pupil of Wamsley or Thomas Smith, and during his working life brought about a considerable improvement in the London school of instrument making. Joseph Hill was almost certainly his pupil, as were John Betts, the leading dealer at the end of the century, Edward Betts and Duke's son Richard Duke jr, who was still working in 1810 (he by no means equalled his father in the craft).

Most of Duke's instruments were made on the then fashionable model of Stainer, which sets them at a disadvantage today. Others, however, were made on an individual pattern strongly influenced by Stradivari, and are more popular in consequence. A few set out to be copies of Stradivari, using the most handsome materials available, and rank among the best of English violins. Small violas with a 38-cm body length are also known, and a very occasional cello. Duke has been flattered and at the same time insulted by 19th-century imitations of his work. Scores of almost worthless factory violins are coarsely branded 'Duke, London' at the top of the back, made by German artisans at the request of the British trade. His originals are also branded, but in fine lettering, and in addition are often signed by the maker on the interior.

CHARLES BEARE

Duke, Vernon [Dukelsky, Vladimir Alexandrovich] (b Parfianovka, nr. Pskov, 10 Oct 1903; d Santa Monica, Calif., 16 Jan 1969). American composer of Russian birth. He studied with Gliere (1916-19) and Dombrovsky (1917-19) at the Kiev Conservatory and then fled the Revolution with his family, settling first in Constantinople (1920-21) and then in New York (1922). There he wrote a piano concerto for Rubinstein. From 1924 he was in Paris and was commissioned by

Dyagilev to write a ballet based on his concerto *Zéphyr et Flore* (performed by the Ballets Russes at Monte Carlo and Paris in 1925). In London he wrote music for the stage (c1926-9) before returning to New York, where he studied orchestration with Schillburger (1934-5). He became an American citizen in 1936. In 1948 he founded the Society for Forgotten Music. At Gershwin's suggestion he adopted the pseudonym Vernon Duke for his popular songs and light music (first with *Yvonne*, 1926), continuing to use his Russian name for his other works until 1955. Duke developed two styles, one for his choral works, operas, ballets and orchestral and chamber compositions, which were championed in the USA and Europe by Koussevitzky, and another for his revues, musicals and film scores, for which he was best known. His most successful work was the musical play *Cabin in the Sky* (1940), which was performed on Broadway by an all-black cast that included Ethel Waters and was choreographed by Balanchin. In many of his concert works Duke used a contrapuntal style; in his songs the melodic style is expansive, almost rhapsodic, and uses chromaticism and wide arpeggios. In addition to an autobiography, *Passport to Paris* (Boston, 1955), he wrote *Listen Here! a Critical Essay on Music Depreciation* (New York, 1963) and Russian poetry published under his original name (Munich, 1962-8).

RONALD BYRNSIDE

Duke's Theatre. The original name of Lincoln's Inn Fields Theatre, London; see LONDON, §IV, 3.

Dulcayna (Sp.) An ORGAN STOP (*Dulcian*).

Dulce melos. (1) The Latin term for DULCIMER.

(2) A string keyboard instrument (Fr. *doucemelle*) shown in the manuscript treatise by ARNAUT DI ZWOLLE (c1436-54). It was essentially a keyed dulcimer whose action to a large extent appears to prefigure that of certain early pianos. The layout and stringing of the instrument resemble those of many dulcimers in that the sections of a string on opposite sides of the bridges are used to sound two different notes.

In Arnaut's instrument there were 12 unison pairs of strings passing over four bridges. The distances between the first and second bridges (counting from the left), the second and third, and the third and fourth were in the ratio 4 : 2 : 1; hence that section of any pair of strings struck between the second and third bridges would sound an octave higher than the section between the first and second, that between the third and fourth would sound an octave higher still. Each of the 12 pairs of strings was thus capable of sounding three notes: its basic pitch (struck between the first and second bridges) and that note one or two octaves higher. In this way the 12 pairs of strings, being tuned consecutively by semitones, provided a fully chromatic range of two octaves and a 7th, from *B* to *a''*, all the *B*'s being sounded from the first pair of strings, all the *C*'s from the second pair and so on.

Arnaut gave two different layouts for his dulce melos. In the first the bridges are all placed parallel to one another and perpendicular to the front of the instrument's rectangular case. All the strings thus have the same length, even though the highest and lowest pairs are tuned nearly an octave apart. In the second layout (see illustration), the bridges are placed obliquely in order to mitigate this problem, but the difference in length between the lowest and highest strings is still far less than it should be for just scaling, and the keys are of necessity more cranked than they are in the first design. In both designs it would appear that the soundboard was near the bottom of the case, with the keys and action above it, the strings being carried on very tall bridges resting on the soundboard and rising between the groups of keys for each octave of the instrument's range.

The action that Arnaut specifically suggested for the dulce melos is the fourth of those very crudely depicted and very cryptically described on the page of his manuscript devoted to the harpsichord (see HARPSICHORD, fig. 2, upper right-hand corner). The diagram and description are far from unambiguous, but it would appear that a staple-shaped metal 'hammer' carried by a slip of wood hinged to the key at the back was thrown

Arnaut's second layout for his dulce melos, the strings would run from left to right, crossing all four bridges (F-P lat 7295, f.130)

against the strings when the upward motion of the back of the key was stopped by a fixed obstacle. Although this mechanism has no exact parallel in any surviving piano action principally because it includes no means for making the hammer move faster than the key - it seems to have been far closer to the action seen in some mid-18th-century German square pianos (which like all instruments with German action have their hammers mounted on the keys) than to the TANGENT PIANO action to which it is ordinarily likened. There is no documentary evidence for Galpin's suggestion (*Grove 4*, suppl.) that the mysterious CHEKKER employed the action of Arnaut's dulce melos

EDWIN M. RIPIN

Dulceon (Cz.) An ORGAN STOP (*Dulcian*)

Dulciaan (Dutch) An ORGAN STOP (*Dulcian*).

Dulcian [dolcian] (Ger. *Dulcian*). (1) The name commonly used for the primitive version of the bassoon in one piece, as opposed to the later type in joints (see *BASSOON*). It should not be confused with *DOLZAINA*, one of the *WIND-CAP INSTRUMENTS*

(2) An ORGAN STOP.

Dulciana. An ORGAN STOP (*Dulcian*).

Dulcimer. A name applied to certain instruments of the zither type with more than one string but without a keyboard. In many parts of the world, the dulcimer has a trapeziform box, its strings, commonly from two to six for each course, are unfretted, but some are divided into two segments by a partitioning bridge (see fig.1). The courses are usually set in intersecting horizontal planes. The player may hit the strings with hammers or pluck them with the fingers or a plectrum. Many scholars, however, reserve the term 'dulcimer' for an instrument played with hammers, calling it a 'psaltery' when the plucking technique is used. The present article deals with instruments which are hammered or which, though plucked, have features that would facilitate hammering. (In the USA, where the hammer technique is normal, the term 'hammer dulcimer' or 'hammered dulcimer' has been coined to avoid confusion with the 'Appalachian' or 'mountain' dulcimer, a distinct instrument with a relatively narrow body and fretted melody strings; see *APPALACHIAN DULCIMER*.) The dulcimer's history is well documented from the mid-15th century. The instrument has been used in popular, folk and art music of the West, it is widespread in eastern Europe, north Africa, central Asia, India, Korea and China and holds an eminent position in the classical music of Iran. The name 'dulcimer' was used occasionally in the King James version of the Bible for the *nebel* (see *JEWISH MUSIC*, §I, 4

1 Cross-section through a typical dulcimer, showing the main structural features

2 Dulcimer with two bridges, supported by a neck strap etching 'La musicienne des Alpes' (1764) by L. M. Halboul after J. E. Schenau

(iv)), but the ancient Hebrews evidently did not have a dulcimer. The term has also been applied to an instrument of the glockenspiel type used in English schools since the early 1930s (see L. de Rusette *Dulcimer Playing for Children*, London, 1934).

1 Nomenclature 2 Structure 3 Hammers 4 Tuning and stringing 5 History to 1800 6 History since 1800

1. NOMENCLATURE. The dulcimer has been known by dozens of different names. Most of these fall into one of six families. The Persian term *santur* and its cognates (e.g. *santari*, *santuri*, *santir*, *suntur*), derived from the Greek *psallo* ('to pluck'), possibly via the Aramaic *psantrin*, is used in various areas that have absorbed Islamic influence (e.g. Egypt, Georgia, Greece, India, Slovenia, with the variant *šenterija*). The same term is used in Syria and elsewhere for the plucked zither known as the *qānūn*, and this confusion is by no means rare. The dulcimer-type *santur* has 'chessmen' bridges (see §2) and horizontal tuning-pins; it is trapeziform, with an acute angle of about 45°, except in India and Georgia, where the angle is less acute, about 75°.

The Mandarin Chinese term *yang-ch'in* ('foreign string instrument') is the commonest one in the Orient, and it has also been borrowed by Indian Sanskrit. The term used in Mongolia is *yoochin*; in Japan *yan kin*, in Korea *yanggūm*; among the central Asian Uighurs *yenjing*; in Thailand *kim*. Like European dulcimers, these usually have long bridges (chessmen only occasionally), vertical tuning-pins and an acute angle of about 60°.

The other groups of names are used in various parts of

Europe; Italy has examples from all four, France and Germany both have examples from three. From *kimbalom* in eastern Europe and *tympanon* in western Europe – both Greek names for a struck instrument – come two separate lines of derivation. *Kimbalom* yields *cimbalom*, *zimbel*, *tsimbali*, *cymbaly* and *cimbolai* in the Slav languages; *jambal* in Romanian; and *cemballo* in Italian (some of these names are used for the percussion cymbals and the harpsichord). *Tympanon* is the root for *tympanon* in French, *timpanón* in Spanish, *timpano* in Italian; some writers would include the Irish term *tiompán* in this group, but it has been clearly shown that it was never used for 'dulcimer' even though it has very recently been adopted as such in the world of revival folk music (from this same root come 'timpani' and 'tympanum', the kettledrums and eardrum).

Terms related to the English 'psaltery' also derive from the Greek *psallo*, via *psaltérion* (Gk.) and *psalterium* (Lat.), and are found only in western Europe and its colonies. Such terms include *psaltari*, *salterje* etc (Ger., Old Saxon); *salterio* (It., Sp.); *psaltérion*, *salterion*, *psalterium* (Fr.); *psaltere*, *psalterio* (Old Fr.); and *sotrie*, *sowtrie* (Middle English). Many reference works give *salterio tedesco* ('German salterio') as the normal Italian dulcimer name in fact the only primary source for the term is Bonanni (*Gabinetto armonico*, 1716), who used it because he was describing and illustrating a German instrument; later writers failed to note this point and used the label as if it were the normal Italian name for the instrument, and even a migration theory was based on this misunderstanding. All other primary sources refer simply to *salterio*. Some of these names were in use in the Middle Ages for instruments that had few dulcimer features, but the names survived and were used later for instruments with many or all of the features of today's dulcimers. One such is the McKenzie psaltery, which is played in the USA, although recently copied from a 19th-century patented dulcimer, it is considered by its players to be a distinct instrument.

The term 'dulcimer' derives from *dulce melos* (Gk. and Lat. 'sweet sound') and is common only in English (i.e. in Britain, North America and New Zealand), with variants such as *dowcemere*, *dulcimor(e)*, *dulcimir*, and possibly *dulsate* and *dulsa chordis*. Other derivations are *doucemelle*, *doulcemelle* (Fr.); *dolcimela* (It.); *dolcema* (Sp.); and poetically *dwsml* (Welsh). The term *dulce melos* was also used by HENRI ARNAUT DE ZWOLLE (c1440) for a related keyboard instrument.

Hackbrett, a German term for a chopping-board, is the normal name for the instrument among the Germanic peoples; hence *hackbräd*, *hackbrade* (Swed.); *hakkebrett* (Danish); *hakkebord* (Flemish). *Hachbratt* (Swiss-Ger.) etc; and such affectionate diminutives as *Brettli* in Austria and *Hachbratli* in Switzerland.

These various names convey some of the character of the instrument within each culture, and it is surely significant that all except the *Hackbrett* group have foreign derivations or associations. Other descriptive names are current in smaller areas: in Hong Kong a word meaning 'butterfly harp' or piano; in Tibet one meaning 'many strings' (*gyu-mang*); whamiddle and lumberjacks' piano (Michigan, USA); *hammarharpa* (Sweden). The PANTALEON is said to have been named by Louis XIV in 1705 after its inventor, Pantaleon Hebenstreit.

2. **STRUCTURE.** The body of the dulcimer is almost universally a box construction (fig.1), though sometimes bridges and strings are mounted on a plank with soundholes to create a resonance chamber when fixed with battens to a table. Some makers believe that there is a relation between the number of soundholes and the volume of sound, but instruments in Scotland and elsewhere have none and sound just as well. Soundboards are normally flat, but the old northern Irish dulcimer was curved or vaulted, as are some American instruments and some examples of the Chinese *yung-ch'in* and Tibetan *jyu-mang*. As a practical alternative to doubling the string lengths for every octave descent in range, a trapezoidal shape has been commonly adopted, with the strings at different tensions and sometimes of different thicknesses.

A length of about 1 metre along the bottom side is common. Small instruments about 60 cm long were made in Flanders in the 17th century and England in the 19th, and larger ones about 130 cm long are known in England, the USA and Alpine areas. The concert cimbalom is even larger, about 160 cm long, while the pantaleons of Hebenstreit and his pupils are said to have been nearly 3 metres. A normal depth is about 5 to 7 cm, but the old northern Irish dulcimers were 20 cm deep, and the concert cimbalom is 30 cm deep. A larger instrument is by no means always louder, although the concert cimbalom has a very characteristic resonance; a longer instrument gives a lower bottom note, a broader instrument (from front to back) more notes. Families of dulcimers have been built in central Asia, the Ukraine and Styria.

Most dulcimers are portable, some easily so, some less easily. Instruments with dampers operated by a pedal are necessarily built with legs (concert cimbalom, Uzbek *chang*, etc), and legs are characteristic also of some American instruments (see §6). A neck strap is quite commonly used in eastern Europe and occasionally elsewhere (the Alps, Germany, Milan, see fig.2). Decoration varies widely; moulding and marquetry are common, and the soundholes often have a rose carved in the soundboard or made of gilt paper, metal, or silken threads. It is thought to have been a Persian custom to inscribe poetry on the table. In China the bridges are often delicately carved, and the outer edges of the Cantonese 'butterfly harp' are decoratively scalloped.

Bridges are of wood, but almost always with a wire rod or nail set in the top (fig.4a below); in China ivory caps are used instead of wire (see CHINA, fig.17), and one small English type has a brass covering. There are numerous ways of arranging the bridges. On some instruments a long solid bridge divides all the strings into two playable parts; Virdung illustrated such an arrangement in 1511, and it is still found. A far commoner arrangement is illustrated in fig.3, from Cornelisz van Oostzaenen's painting *Adoration of the Infant* (1512): two long bridges each carry half the courses, led alternately over one bridge and through cut-outs in the other. Normally only one bridge divides its strings into two sounding portions. This is called the treble bridge and the strings the treble strings. The long undivided strings crossing the other (bass) bridge are the bass strings. From the 18th century the bridges were sometimes segmented, so that different strings could be divided into different proportions, and as early as 1636

Mersenne depicted an extra bridge on the left to bear two or three extra bass strings running the whole length of the instrument.

On a few instruments both bridges divide the strings; the right-hand strings thus become effectively shorter and lose their bass function, but are tuned to give extra chromatic notes instead (Austria, England, Georgia). These bridges are used on larger examples of the north Chinese *yung-ch'in* and are occasionally found on 18th-century European instruments. A tuning diagram pasted on the back of a Milanese *salterio* dated 1779 shows five bridges, with a correspondingly complex tuning system. In the 1920s a chordal dulcimer was made in England with a third bridge carrying seven courses, each of which was tuned to a four-note chord as on a zither-harp.

'Chessmen' bridges (see fig.4b) were first depicted around 1600, but they did not become common until the 19th century, when presumably they facilitated chromaticism. At first they were joined by a rod or wire (as in fig.13 below), so they were only marginally more flexible than the long bridges. Even when they are not joined, they are often set in straight lines, so the flexibility is not exploited, thus the full potential of chessmen is only sometimes realized (e.g. on the Persian *santur*). On some Indian types the chessmen are apparently placed at the extreme edges of the soundboard.

A number of instruments combine more than one system. Schunda's concert cimbalom (see §6 and fig.17 below), for instance, and some 18th-century *salterii* which had divided long bridges for the trebles and the

5. Rectangular dulcimer with undivided strings miniature from an Italian MS, c1490 (GB-Lhm Add.34294, f.37r)

right-hand basses but chessmen for the extra left-hand basses. There are also instruments in which all the strings have only one playing portion and are in the same horizontal plane. Most of these are designed to be plucked and could therefore be classed as psalteries; but they sometimes have dulcimer names, and some early pictures and carvings show such instruments being hammered, though they do not always have strings of equal length as shown in fig.5 (The positioning of the bridges is discussed in §4 below.)

3. HAMMERS. Hammers (see fig.6) may have hard or soft playing-heads and stiff or flexible shafts, and be with or without finger-grips. In Britain and North America they are often designed by the maker or player; elsewhere there are standard types. The Chinese use very thin, springy bamboo beaters (sometimes with carved shafts) without a finger-grip. Indian hammers are of rigid wood, with an elegantly carved finger-grip. Persians use very light wooden hammers with a flat end and grips for both finger and thumb; nowadays these are mass-produced in plastic. Cimbalom players use wood thickly covered with soft cotton. A type used in Styria consists of a wooden ring on the end of a shaft of sprung steel, capable of producing a very rapid tremolo. The *Kloppeln* of Salzburg and Bavaria have two playing surfaces, wood and felt, a similar device, but with a much longer, thinner shaft, is used in Appenzell. Players in Valais (Switzerland) use wooden hammers bent into a curve, with finger-grips. 18th-century west European hammers are of carefully turned wood (see fig.14 below). In England lengths of cane are steamed and bent into a loop at one end, then bound with wool or, in northern Ireland, with leather. Scottish players use carved wood without a finger-grip. Whalebone corset stays used to be particularly recommended, as was crab-pot cane, and cork or velvet for a soft sound. In North America and in the Alps experiments have been made with double-headed hammers for playing 3rds one-handed, and a few players have the left hammer longer than the right because it plays the higher notes, farthest from the player.

4. TUNING AND STRINGING. The position of the treble bridge determines the portions into which each treble string is divided and hence the relative pitch of its segments. The maker's intention can often be discerned even when the bridge is missing, as there is normally an inside support directly underneath. The commonest ratio is 2:3, giving a 5th between the two parts of the string. In East Anglia some of the bridges are pushed 'a semitone to the left', producing a minor 6th (ratio 5:8), and Geiser mentioned the use of this interval in Switzerland. In the USA a 4th (3:4) is quite common, though some players now adopt a 5th (2:3) because it gives more keys. An octave (1:2) is normal in Iran, sometimes modified by semitones.

Early tunings probably consisted of a simple major scale and used the 2:3 ratio (see fig.7a). This has remained the basis of most systems, transposed and extended to a greater or lesser degree; fig.8 indicates the treble notes in three such modern schemes. The bass notes are commonly an octave below the right-hand portion of the trebles; less often they are a 4th below, hence an octave below the left-hand portion of the trebles. Sometimes the lowest strings are tuned down to the first, fourth and fifth degrees of the scale. The

scheme in 4ths (3:4) used in the USA is similar but has a sharp 7th and gives only two major keys (see fig.7b). However, there are many variations on the basic 2:3 diatonic pattern, giving extra semitones; an example from East Anglia, using movable chessmen bridges, is shown in fig.7c. A device used since the 17th century to render a diatonic instrument chromatic is the dital, a small metal lever which may be pushed up to shorten the sounding length of a string by about one-eighteenth and thus raise its pitch by a semitone. (For a similar device on 17th-century harps, see HARP.)

Four different systems are in use to provide a fully chromatic scale through most of the instrument's range. The McKenzie psaltery retains the 2:3 ratio, each side of the bridge is separately tuned in semitones, as shown in fig.7d. Another American system, albeit rare, has the bridge just right of centre, giving a semitone between the two parts of the string. A third system, devised independently by a 19th-century Englishman, Charles Grey, and a 20th-century Austrian, Julius Derschmidt, provides 'white notes' on the left-hand bridge and 'black notes' on the right, using a 2.3 ratio at both bridges. An instrument used in the vicinity of Salzburg and in Bavaria has two whole-tone scales, one on each bridge, with no strings divided. The Schunda cimbalom uses this system for its bass range (nearest the player); the treble section uses a modification of the diatonic 5ths system, with extra small bridges for the highest notes, as shown in fig.7e. The result is four chromatic octaves, *E* to *e'''*, plus *D*, with no note duplicated. In spite of this plethora of notes the instrument (at the near end of the treble bridge) is essentially based on a C major scale on four courses.

Steel piano wire is the commonest material for modern dulcimer strings. Each string may span the instrument twice (from wrest-pin to hitch-pin and back to another wrest-pin) so that a wire crossing the treble bridge will have four sounding lengths. Many instruments have strings of the same gauge throughout, though older players and tutors (in the West) recommend three or four different grades.

In the *santur* the wrest-pins are fixed horizontally in the side of the instrument (see IRAQ, fig.9), but in the *yang-ch'in* and in most Western dulcimers they are fixed vertically, occasionally the pins are fixed at an angle between the vertical and horizontal. They are nearly always to the player's right, but a few instruments in the USA and India are reversed. Among those early engravings that appear to show reversed instruments, it is not always clear which are due to the kind of mirror-image printing error that is responsible for depictions of left-handed fiddlers, flutes and so on.

Usually each treble course has the same number of strings. Four is the commonest number by far, three and five are not unusual, and six, seven or even eight are occasionally found on 18th-century instruments. Two was apparently a common number before the 18th century and was also the number used on 19th-century American instruments, and hence on McKenzie psalteries; double courses are also used in Mongolia and, increasingly (for ease of tuning), in England. Quite a number of dulcimers have fewer strings per course for the basses than for the trebles: three for each bass course and four for the trebles is fairly common in England and Styria; other patterns are two in the bass and three or four in the treble, three or four in the bass

and five in the treble, or even six in the bass and seven in the treble. More complex arrangements are also found, mostly on 18th-century instruments, with fewer strings for the lower treble courses than for the higher ones, and similarly among the bass courses. Thus on one 18th-century French dulcimer the bass bridge (to the right in fig.9a) carried three courses of four strings each and ten courses of five, while the treble bridge carried three courses of five strings each and ten of six. Fig.9b represents a north Chinese *yang-ch'in* with three bridges, the treble bridge carrying nine quadruple courses. On an older dulcimer with bridges missing, the pattern of the wrest-pins may help in making a reconstruction.

Northern Ireland (a) wood, (b) steam-bent cane with soft leather; England: (c) cane wound with wool, (d) steel, (e) wood with cork head, (f), (g) wood, Scotland: (h) wood; Bavaria: (i) wood with felt and suede, (j) wood with soft leather, (k) wood with soft leather, flexible resin shaft, Switzerland. (l) wood, from Valais. (m), (n) wood with chamois leather, from Appenzell; Iran: (o) plastic, or often light wood; China: (p), (q), (r) bamboo

7. Dulcimer tunings: (a) simple diatonic scheme probably used on the earliest dulcimers; (b) scheme in 4ths giving the keys C and G major, USA; (c) scheme using movable chessmen bridges giving the major keys E♭, B♭, C, F, D, G, A, E, and minor keys G, D, A, E, F♯, East Anglia; (d) chromatic scheme in 5ths, MacKenzie psalter; (e) chromatic four-octave scheme of the concert cimbalom

8. Modern diatonic dulcimer tunings from Styria, Scotland and Northern Ireland based on the simple diatonic tuning shown in fig.7a

9. Examples of treble and bass stringing: (a) 18th-century French, (b) north Chinese yang-ch'in; Arabic numerals indicate the number of courses, Roman numerals the number of strings per course (lower-case for treble courses, upper-case for bass courses)

Tuning a new double-course dulcimer can be completed in a few minutes; a more complex instrument may take hours. In north China tiny cylinders of steel are placed under each string to allow fine tuning; elsewhere the 5ths are tempered by a slight adjustment of the bridge position or by stretching individual sections of the strings so that the tension becomes slightly uneven in the two parts.

5 HISTORY TO 1800. Little is known of the dulcimer from before the mid-15th century. It is often said to have been of Persian origin, but Farmer (*Grove* 5) adduced considerable negative evidence, pointing out that 'not one of the great Arabic and Persian treatises on music contains the slightest reference' to the dulcimer and concluding that 'it seems to have found its way to Iranian ears during the 17th century, perhaps through Turkish influence'. The oldest known depiction of an instrument that is unmistakably a dulcimer—it is trapeziform, with lateral strings struck by hammers—is in a 12th-century carved ivory book-cover made in Byzantium for Melissa of Jerusalem, the wife of Foulques, Count of Anjou (see fig.10). No other dulcimer is known for another 300 years, although there are numerous medieval depictions of the psaltery, plucked only and with undivided strings in a single plane. In the map shown in fig.11 the dotted arrow north-west from Turkey suggests that perhaps it was from Byzantium that the dulcimer was introduced to western Europe in the 15th century.

Of the many illustrations of dulcimers after about 1440, only about a quarter are angel representations, although virtually all of the medieval psaltery players are heavenly beings. The medieval instrument is usually held flat against the body, the player looking out and away from the instrument, but the position shown for the dulcimer is such that the player must look down 'into' the instrument to get the right notes (fig.12). Around 1440 Arnaut de Zwolle described the divided-strings principle in connection with a keyboard instrument, the Latin name of which (*dulce melos*) is evidently the source of the term 'dulcimer', which appeared later in the 15th century. Most of the references to and illustrations of the dulcimer from the next 100 years centre on the German and Alpine regions, including Grenoble and Aosta, but there are also others from Italy, Poland, Hungary, Bohemia, Flanders, northern France and England. Surviving instruments (from 1514 and later) have between 18 and 25 courses and mostly four strings per course; but the illustrations sometimes show two strings to each course – or occasionally only one – and some instruments with no more than 12 courses. Most of the illustrations appear to depict players from the higher classes of society, but the dulcimer was evidently popular elsewhere as well: Luscinus described it in 1536 as commonplace (*ignobile*) and esteemed particularly for its volume, and Gerhard de Jode (c1600) portrayed it along with the hurdy-gurdy and bagpipe.

More detail is known about the dulcimer in the Baroque period, although the evidence relating to its dispersion is far from complete. There is an isolated Norwegian reference in the introduction to a psalm-book (1623) by the Danish bishop Anders Arrebo. In Sweden the *hackbråd* in 1683 was an instrument played by farm workers. Dulcimers were certainly played in Czechoslovakia at this time, reached Spain and became

more widespread in Italy. According to Farmer, the first unequivocal indications of the dulcimer in Iran or Ottoman Turkey are from the 17th century (hence, in fig.11, the arrow leading into Turkey). Within 100 years the dulcimer was being played in most areas under Turkish domination – but by Christians and Jews rather than by Turks. In 1609 a dulcimer was recorded with a violin in a ship's log in Jamestown, Virginia. According to Korean tradition the dulcimer arrived in Korea in 1725 and only subsequently reached China and Japan.

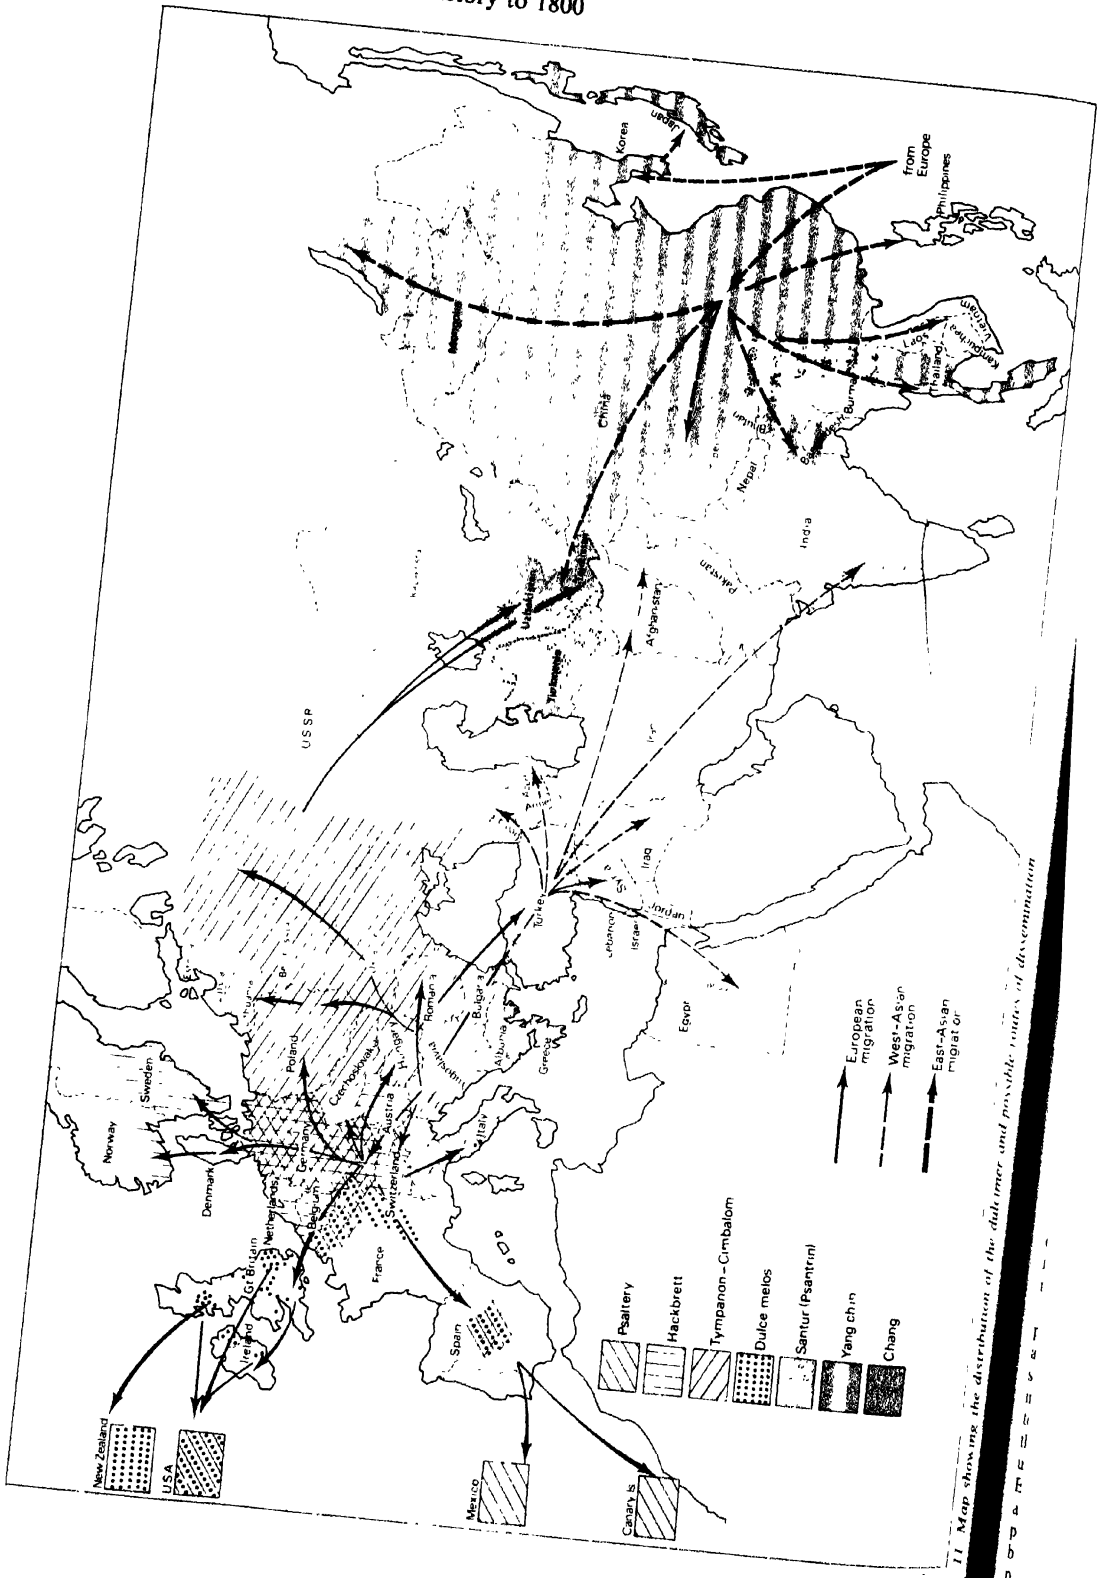

By this time nearly all dulcimers were trapeziform and had multiple courses divided by a long bridge. A few 17th- and 18th-century bridges were made of several blocks rather than long strips; but as the blocks were joined by a rod across the top, they did not provide the flexibility of the later 'chessmen' bridges. Double courses are most often in evidence, but some

10 Earliest known depiction of a dulcimer: detail from a 12th-century ivory book-cover made in Byzantium for the wife of the Count of Anjou (GB-Lbm Egerton 1139)

instruments had three, four or even five strings per note. Praetorius depicted fewer strings for the bass courses than for the trebles (five triple courses over the treble bridge but four double courses and one single over the bass bridge) and subsequently this kind of arrangement became increasingly common. There are occasional single-course instruments without divided strings, some of them designed only to be plucked but nonetheless called dulcimer or *Hackbrett*. Other instruments, in the Low Countries, Spain and perhaps Italy, were also plucked but have the characteristic arrangement of strings crossing in two planes so that they could equally well be struck.

Baroque illustrations are nearly all of real players (as in fig.13), with just the occasional allegorical figure. Translators of the Bible, on the Continent as well as in England, sometimes used 'dulcimer', *hackbråde*, *psalterion* or the like for the Hebrew term *nebel*. Some writers alluded contemptuously to the use of the dulcimer among their social inferiors, and Mattheson suggested in 1713 that it 'should be nailed up in houses of ill repute'. However, Pepys liked the dulcimer ('played on with sticks knocking of the strings, and is very pretty') and

11 Map showing the distribution of the dulcimer and possible routes of dissemination

mentioned it in 1662 as accompanying puppet shows. Grassineau noted a similar use of the instrument in 1740.

Mersenne devoted about 1000 words to the *psaltérion* – its bridging, stringing, tuning, playing techniques and repertory – and illustrated a double-course instrument with notes on only one side of a single bridge. He described more complex types with two or three bridges, strings of gut or silk (as well as the more usual metal) and courses tuned in octaves (and the added possibility of 5ths and 15ths). He mentioned also a double instrument with high and low registers for playing duos. He depicted an extra-long bass course nearest the player, and a lid that could be locked. The player might use, he said, a single hammer for a single melody, or two hammers to play part-music; he might pluck the strings with fingers or quill, or hammer a melody with the right hand and pluck chords with the left. Mersenne said that the dulcimer could be played after only an hour or two of practice but that with industry one could derive as much pleasure from it as from any other instrument and that it was suitable for all sorts of songs, for teaching singing, for just intonation and so on.

In 1704 Pantaleon Hebenstreit brought a large version of the dulcimer to Louis XIV, who decreed that the instrument should share the name 'pantaleon'. Hebenstreit was so successful in adapting it to courtly taste that he was appointed 'pantaleonist' to the Dresden court in 1714; and three years later his influence and that of the instrument were cited by J. F. Schröter in connection with the early piano. In the later 18th century a number of pantaleon virtuosos travelled about Europe, notably Hebenstreit's pupil Georg Noëlli, who played in Sweden, England, Italy and other countries. Italian composers including Jommelli, Monza and Chesa wrote for the *salterio*. Schickhaus (1972) listed nine sonatas for dulcimer with continuo, two trios with violin and cello, two concertos (one with oboes and horns as well as strings) and a sinfonia with strings, all in *galant* style; some of these have been published in modern editions. Mitjana (*EMDC*, 1922) discussed a Spanish opera of 1753 in which the prima donna accompanied herself on a *salterio*, with an orchestra of flutes and strings.

A Danish manuscript of 1753, *Tablature indrettet till Hakke-Bret* (in the Musikhistorisk Museum, Copenhagen), contains the melody lines of 43 dance- and song-tunes from various countries, written in note names on a five-line staff. A few paintings and engravings from the 16th century to the 18th show the dulcimer being played from music (including a march in note-name tablature, as in fig.13, and a 'Pastoril' in staff notation), in various ensembles.

The 18th-century instruments were often more complex than their 17th-century precursors, with as many as five bridges (to achieve complete chromaticism) and seven or eight strings to a course. Verschuere Reynvaan in Flanders depicted a right-hand extension to the body to carry long single bass strings tuned an octave below the rest of the course (see fig.14). Similar systems, but usually with the extension to the left, appeared in England, Germany and France. Reynvaan's drawing also shows little metal tangents or ditals that could be pushed up between a course of strings and the sound-board, shortening the sounding portion of the strings to produce the note a semitone higher than the open string

12. Musician with a small trapeziform dulcimer with undivided strings: detail of a miniature illustrating Psalm xcvi from the 'Isabella Breviary', Spanish (with Flemish miniatures), late 15th century (GB-Lbm Add.18851, f.164r)

13. French or Flemish dulcimer with chessmen bridges mostly joined by rods, and played with the hammers held between two fingers in the normal way: mezzotint by Peter Schenk forming an illustration to a text from Virgil's 'Aeneid' which refers to a player of the kithara; the music is a march written in note-name tablature

along with the fiddle, accordion and various other instruments which were used because they were available. Other immigrant groups - Czechs, Germans, Greeks, Hungarians - brought their dulcimers and to some extent kept their native traditions alive in the new country. In the later 19th century several makers patented designs which included such features as double courses, an integral rectangular case, curved soundboards (to allow the bass strings to be played at either end), legs, dampers (antedating those of the pedal cimbalom), adjustable 'frets' for fine tuning and a reversible frame with two soundboards and two sets of strings (one for flat keys, the other for sharp ones). Modern McKenzie psalteries retain many of these features.

A dozen or more tutors were published between 1848 (by Haight in the USA) and about 1920 (by Dallas in London). Also published were plans for dulcimer builders, such as Charles Grey's design, in 1883, for an instrument which had 'white notes' over the left-hand bridge and 'black notes' over the right (a similar system was independently produced in Austria by Julius Derschmidt in the 1950s). The period between the world wars must have been something of a heyday for the dulcimer in the USA, as in Britain. A spate of gramophone records became available commercially, and from 1924 Henry Ford's Early American Orchestra broadcast and recorded regularly with fiddle, dulcimer, cimbalom and double bass or tuba.

Older American dulcimer players still play dance melodies monophonically, but younger players are experimenting with diverse textures and techniques. In the increasingly popular style characteristic of the McKenzie psaltery, for instance, slow-moving melodies

are played in the lower register accompanied by rippling figures in the treble. There is no evidence for living dulcimer traditions in the folk music of the Canary Islands (where there survives a single 19th-century instrument, in a museum), Norway (where the dulcimer has been confused with the *langeleik*, which is related to the Appalachian dulcimer) or Sweden (where the last known player was active in the 19th century).

In 1912 a 'Hackbrettler Kongress' was organized in Brig, the major town of the Swiss canton of Valais; intended as a satire in the Germanic carnival tradition on an earlier Alphorn congress, it nonetheless attracted 13 *Hackbrett* players and a crowd of 2000. The *Hackbrett* traditions of the Swiss Alps are basically those of the Germanic peoples, but the instrument was formerly known in parts of Switzerland. Nowadays there are two distinct styles: a simple one from Valais in the west, where the dulcimer is played with wind instruments (clarinet, trumpet, accordion etc) as well as with the fiddle, and a more refined style from Appenzell and Toggenburg in the east, where it is normally played with a string ensemble - perhaps with two fiddles playing the melody in 3rds, a cello playing off-beat chords and a bass. In Styria a combination of melodian, *Hackbrett* and bass has now taken over from the older string group. Tyrolean and other traditions have largely died out.

In Salzburg in 1932 Tobi Reiser, inspired by ideas from Styria, redesigned the dulcimer to accommodate chromatic harmony, and by 1940 there were 1000 players of the new instrument, which was soon adopted in Bavaria too, there, evening classes in the instrument produced by the 1970s some 5000 'Hackbrödler'. Salzburg and Bavaria have a common style of

16 Musicians with dulcimer, clarinet, fiddle and drum, Ukraine, 1938

Stubenmusi (drawing-room music) using *Hackbrett*, zither, harp, guitar and bass. Some Styrian players with their waltzes and polkas rather scorn the Bavarians' refined *Stubenmusi* with its delicate instrumentation and Mozart minuets.

Some years after such ideas were patented in the USA, the Schunda family in Budapest produced a large concert dulcimer or cimbalom, with legs, an integral rectangular case and dampers operated by a

pedal, but with a greater range – four chromatic octaves (see fig.17; see also HUNGARY, fig.4). Shortly afterwards similar instruments were made in Bucharest. These are now standard town instruments – played, for instance, by gypsy virtuosos in cafés – in both Hungary and the western part of Romania, where many Hungarians live, and are known also in parts of the USSR, Poland, Czechoslovakia and Yugoslavia. In the country the older, portable dulcimer is still played

17. Cimbalom (concert dulcimer) by Schunda, Budapest, 1874 (*Magyar Nemzeti Múzeum, Budapest*) general view below, plan view above, see also GYPSY MUSIC, fig 1

(Hungarians call both types 'cimbalom'), characteristically providing the harmonic background to fiddles and bass, with off-beat chords and arpeggio flourishes. Large instruments without dampers or pedal are known in Hungary and Poland. The smaller dulcimer is still widely used in the country (see fig.16; see also GREECE, fig.10); in Romania it is called *țambal mic* (cf 'micro'), and a piece of cloth is sometimes woven among the strings, giving the same effect as damping a concert instrument (see ROMANIA, fig.6).

The concert cimbalom was accorded the status of an orchestral instrument by Liszt, who used it in the revised version of his *Ungarischer Sturmmarsch* (1876) and in the orchestral version of his Sixth Hungarian Rhapsody for piano. The instrument's association with Hungarian gypsy music was exploited by Kodály (*Háry János*, 1926), Bartók (Rhapsody no.1 for violin and orchestra, 1928) and other Hungarian composers. Stravinsky's interest in the cimbalom dates from the time of his friendship with the famous Hungarian virtuoso Aladár Rácz (1886–1958), whom he met in Geneva in 1914 and who later (1954) became professor of the concert cimbalom at the Budapest Academy and made a number of remarkable recordings. Stravinsky purchased a cimbalom during his residence in Switzerland in World War I. He composed *Reynard* (1915–16) on it, in the same way as he normally composed on a piano, and included it in the score of *Ragtime* (1918) as well as in *Reynard*; he also planned to use it in an early scoring of *The Wedding* (composed 1914–17) and then began another version whose instrumentation included two cimbaloms. Among the composers who have since been attracted to the instrument are Orff (music for Schlegel's translation of Shakespeare's *A Midsummer Night's Dream*, 1939), Heinz Holliger (*Glühende Rätsel*, 1964) and Boulez (*Éclat*, 1965). Humphrey Searle wrote important cimbalom parts in his operas *The Photo of the Colonel* (1964) and *Hamlet* (1965–8) and also in his Fourth Symphony (1962), *Burn-up* (1962) and *Oxus* (1967).

A L. Lloyd mentioned cimbaloms in Hungary and Transylvania from the 16th century, but van der Meer suggested that the dulcimer in the Slavonic countries dates not from the Renaissance but from the 18th or 19th century, when it arrived from western Europe. It may have been from Hungary that the instrument spread to the Ukraine, Belorussia and the rest of the USSR. At any rate, modern Soviet central-Asian instruments, made in a variety of sizes, have been influenced by Western ideas, notably the damper pedal.

According to Sachs (*Real-Lexikon*) and Farmer, a European dulcimer, *santūr fransez*, appeared in Turkey about 1850 alongside the *santūr turki*, which had already spread to Egypt and Georgia as well as Persia. The modern Persian *santur* (see IRAN, §1, 6) occupies a pre-eminent place in classical music. In Iraq, performances on the dulcimer are featured weekly on television.

In India the *santūr* is deemed a novel instrument, but a well-known musician, Shivkumar Sharma, plays classical ragas with *tablā* and *tamburā* accompaniment and with a technique incorporating tremolo and fast runs.

In China the *yang-ch'in* is played in cafés and for film music and is a normal part of the amateur classical orchestra. It may be played solo, in the older style, but in westernized film music is accompanied by an

orchestra. Rapid two-hand tremolos alternate with single notes, and the occasional ornamentation is produced by 'bending', i.e. pressing a course hard behind the bridge to produce portamento or quickly rising and falling glissando.

DAVID KETTLEWELL

Dulcitone. A type of CELESTA.

Dulcken. Flemish family of harpsichord makers. Anton Dulcken is said to have been born in Hessen; he worked in Brussels and Antwerp, where he died in 1763. His

son, Johan Daniel Dulcken (*b* Maastricht), was in Antwerp by 1741 (presumably when his father moved there) but moved back to Brussels in 1764; he died there some time after 1769. Johan Daniel's son, Johan Lodewijk Dulcken (i), was born in Maastricht in 1736, and by 1756 he had moved to Amsterdam. His son Johan Lodewijk (ii) was born there in 1761; he became instrument maker to the Elector of Bavaria in 1781 and later moved to Munich, where he was still alive in 1835.

Although Johan Daniel Dulcken was born of a German father, and, like his father, worked in Brussels, it has been customary to regard him as one of the last significant Flemish builders of harpsichords. Burney noted that after the Ruckers family, the 'harpsichord-maker of the greatest eminence ... was J. Dan Dulcken'. Although the compass of Dulcken's instruments reflects 18th-century usage (*F* to *f'''*), the scalings are much the same as on the old Flemish instruments. Earlier instruments still have short octave and stops piercing the cheekpiece (like the old Ruckers register ends), though later harpsichords have the *F* to *f'''* compass with the standard 8', 8', 4' specification. A further detail is that the bentside runs inside the instrument, parallel to the outer and separated from it by upper and lower spacers. The Dulcken instruments made from 1745 to 1769 represent the largest single group in the corpus of late Flemish harpsichords; two have knee-levers, and the general tonal style is much as described by Van Blankenburg (*Elementa musica*, 1739), with dogleg jacks for the upper of the two manuals, a lute or nasal row, sometimes a sliding upper manual for coupling. The dogleg system does not allow, any more than it does on English harpsichords of the period, true dialogue between the two manuals. Hubbard pointed out that 'at most, his second manual is an aid to sudden contrasts of tone and timbre'.

Nevertheless, among the 20 or so Dutch Flemish harpsichords dating from the century after the last of the Couchets died, Dulcken models constitute a recognizable type, however local their original market was compared with the Ruckers'. In the 1950s it was assumed that they had a rather more comprehensive and straightforward sound and style than the more idiosyncratic English and French harpsichords of the same period, which were thought to 'interfere more with the music'; whether future research will support this view is unknown. Meanwhile the name of Dulcken has become well known through the many recordings of Gustav Leonhardt on 'Dulcken-copies' made by Martin Skowronek in Bremen. These copies have such beauty of tone, regularity, resonance, brilliance and (particularly in recordings) power that they are unlikely to represent the sound of original Dulcken instruments. For details of surviving Dulcken instruments see Boalch.

DONALD HOWARD BOALCH, PETER WILLIAMS

Dulęba [Dulemba], **Józef** (*b* Nowy Sącz, 28 Dec 1842; *d* Warsaw, 1 June 1869). Polish pianist. He began his studies at the age of 7, first under F. Hollman and Józef Lubowski in Kraków and then under Marmontel and

Maldan at the Paris Conservatoire (1858-60). On his return to Kraków he studied harmony with Mirecki, and then in Prague with Joseph Krejčí. He took part in the national uprising of 1863, distinguishing himself in the Kock engagement. He gave concerts in Kraków, Lwów, Poznań, St Petersburg and Warsaw; he settled there in 1867, and gave many concerts for charity. His playing was noted for its brilliance of technique and its singing tone. He died as the result of a duel (11 May 1869) with S. Kaczkowski, a Warsaw merchant.

IRENA PONIATOWSKA

Dulichius [Deulich, Deilich, Teilich], **Philipp** (*b* Chemnitz [now Karl-Marx-Stadt], 18 Dec 1562; *d* Stettin [now Szczecin], 24 March 1631). German composer. He came of a respected middle-class family (his father was several times mayor of Chemnitz) and matriculated at the University of Leipzig in 1579, a report that he journeyed to Italy has not so far been substantiated. In 1587 he became Kantor at the ducal Gymnasium at Stettin and as such was also in charge of the music at the Pomeranian court and carried out the Kantor's duties at the Marienkirche. In spite of the attractions of this post he moved to Danzig in 1604 to deputize for Nikolaus Zangius, Kantor of the Marienkirche, who had been granted leave of absence. While in Danzig he performed some of his own compositions. In 1605 he resumed his duties at Stettin, where he was as highly regarded for his honour and piety as for his artistic achievements. At some date between 1610 and 1620 he was promoted to the rank of professor at the Gymnasium. In 1630 he retired after 43 years' service, the last 24 of them under the rule of Duke Philipp II, a noted patron of the arts.

Dulichius's works were in his lifetime compared with those of Lassus, and earned him the nickname of 'the Pomeranian Lassus'. They consist entirely of liturgical works, whose texts are all biblical in origin and for the most part in Latin. He was, with Demantius, one of only two leading German composers in the early 17th century to ignore both the continuo and concertato techniques. His motets, especially those in six or more parts, are characterized by strong, emotionally orientated music expressive of their texts. In his music the Venetian and Netherlands idioms are notably synthesized. His style is, however, conservative and lacking in madrigalian mannerisms. As Kantor at Stettin he took immense care over the provision of special music for Sundays and feast days, and his work bears witness to the high standards of performance that must have been reached at the time. After Johannes Wanning, he and Andreas Raselius were the first composers to concentrate on the central passages from the Sunday gospels, a certain similarity between the wording of the title-pages of his *Fasciculus novus* (1598) and Wanning's *Sententiae insigniores* (1584) suggests that the latter work prompted his own.

WORKS

WALTER BLANKENBURG

Dülken, Sophie. German pianist; see LEBRUN family

Dulon, Friedrich Ludwig (b. Oranienburg, 14 Aug. 1769, d. Würzburg, 7 July 1826) German flautist and composer. Though blind from infancy, his phenomenal memory for music was soon evident, and in his ninth year he had composed his first piece and mastered the elements of flute playing. In 1779 he first played in public, and two years later gave his first recital in Berlin. His accomplishments attracted the attention and help of Neuff, Kirnberger, C. P. E. Bach, the innovative flute designer Dr. Ribbeck, Karl Benda and others. It has been suggested that Dulon's first flute was fitted with only the enharmonic E \flat and D \sharp keys devised by Quantz, but there is evidence that he later adopted more keys. In 1784 he played duets with Tromlitz, another flute reformer. Between 1786 and 1792, accompanied by his devoted sister, Dulon travelled, visiting England and Russia where he remained as a salaried imperial musician until 1798. Returning to Germany the next year, he continued his professional life and wrote an autobiography in 1808. He left a considerable body of flute music, all dictated to his amanuensis and published in Leipzig.

PHILIP BATE

Dulot [Du lot, Dullot], **François** (b. Saint-Omer; fl. first half of the 16th century). French composer. In 1514 he was master of the children's choir at Amiens Cathedral and was appointed *maître de chapelle* at Rouen Cathedral on 22 February 1523. He was discharged in January 1531, apparently for failing to fulfil his duties properly. For a few months in 1534 his brother Nicolas served as organist at the cathedral. Too few of Dulot's compositions survive for conclusions to be drawn about his style. *En espérant* has an unusual combination of four low parts, presumably for men only.

WORKS

COURTNEY S. ADAMS

Dulova, Vera Georgiyevna (b. Moscow, 27 Jan. 1910). Soviet harpist and teacher. The daughter of the violinist G. N. Dulov, she studied at the Moscow Conservatory with Xenia Erdeli (1920–22) and Maria Korchinska (1922–5), then in Berlin with Zaal (1927–9). In 1935 she won the All-Union Competition for performers in Leningrad. She was a soloist with the Moscow Philharmonia (1929–31) and with the Bol'shoi Theatre orchestra from 1934. She has toured the USSR, and Britain, Italy, Belgium, Holland, Japan, Czechoslovakia and Bulgaria. She joined the Moscow Conservatory staff in 1943, becoming a professor in 1958. In 1966, 1968 and 1969 she helped to establish and run a harp seminar at Hartt College of Music, USA. Her sensitive musicianship and the finesse and variety of colour in her playing are much admired; Vassilenko composed a concerto for her, Knipper and Balin sonatas, and Khachaturian his *Oriental Dances*. She has transcribed pieces by Ravel and Prokofiev as well as Classical works. She was made People's Artist of the USSR in 1966.

Dulzian (Ger.) (1) DULCIAN.

(2) An ORGAN STOP

Duma (Cz., Pol.) A term originally used to describe an epic, ballad-like narration, but sometimes used interchangeably with DUMKA, see also UNION OF SOVIET SOCIALIST REPUBLICS, §X, 2(i).

Dumage, Pierre (b. Beauvais, baptized 23 Nov. 1674; d. Laon, 2 Oct. 1751). French organist and composer. He was organist of the collegiate church of St Quentin from 1703 to 1710, and then of Laon Cathedral until 1719 when, weary of the chapter's insistence on the letter of his contract, he gave up his career as a professional musician and became a civil servant. His only extant work is a *Livre d'orgue* containing *une suite du premier ton* (1708), dedicated to the chapter of St Quentin. Another *Livre d'orgue*, presented to the chapter of Laon Cathedral in 1712, has never been traced.

The extant *Livre d'orgue* contains eight short pieces: *Plein Jeu*, *Fugue*, *Trio*, *Tierce en Taille*, *Basse de Trompette*, *Récit*, *Duo* and *Grand Jeu*. In his dedication, Dumage describes these as his first compositions and says that he modelled them on the examples of the renowned Louis Marchand, his former teacher. The pieces are entirely representative of French organ music around 1700 in their increasing emphasis on exterior expression and elegance rather than restraint and austerity, a tendency which reached its musically most convincing statement in the *Livre d'orgue* of Louis-Nicolas Clérambault of 1710.

EDWARD HIGGINBOTTOM

Dumanoir, Guillaume (b Paris, 16 Nov 1615; d Paris, 1697). French violinist and composer. A guild member of the Confrérie St Julien and a 'violin ordinaire de la chambre du roi', he joined the *grande bande* of the '24 violons du roi' in 1639 and from 1645 to 1656 was also dancing-master to the pages in the *petite écurie*. In 1654 he left the *grande bande* but in 1655 was reinstated, as leader of the group, and from that date his name appears as an active participant in performances of ballets at court. In 1657 he succeeded Louis Constantin as *roi et maître des ménestriers* for all of France, a post in which he served until 1668, when he was succeeded by his son, Guillaume-Michel Dumanoir. Guillaume Dumanoir's reign as *roi* was a difficult one, his authority was continually contested by members of the guild and especially by a group of dancers who withdrew from the Confrérie St Julien in 1661 and established an Académie de Dance, thereby proclaiming themselves independent. His response to this move was *Le mariage de la musique avec la danse*, in which he forcefully criticized the new academy and argued the dependence of dance on music.

ALBERT COHEN

Dumas, Jean (b Lyons, 1696, d Avignon, 1770). French Jesuit, mathematician, astronomer and music theorist. After early studies in Lyons, Avignon and La Flèche, he became a missionary to the New World in 1726 (principally in Martinique and Illinois), returning to France in 1730 to teach philosophy in Dole and Roanne. In 1733 he became a priest and subsequently taught mathematics at the Collège of Dole. From 1735 to 1742 he served his order as a preacher in several French provincial cities, and he later taught at the Collège de la Trinité in Lyons, where he remained until 1763. At the suppression of his order in France, he retired to the Collège at Avignon, where he lived until his death. Except for early mathematical studies, his writings largely remain in manuscript in Lyons, comprising numerous *mémoires* on different subjects prepared for presentation before the Academy there, to which he was admitted in 1754. Among these is a group devoted to music (*F-LYm* Académie, Fonds du Palais des Arts, 160), which reflects Dumas's principal interest in questions of harmony and of temperament, in both of which he proved himself a follower of Rameau and a disputant of Bollioud-Mermet, a fellow academician in Lyons.

Dumesnil, René (Alphonse Adolphe) (b Rouen, 19 June 1879; d Paris, 24 Dec 1967). French writer and music critic. He studied literature and medicine at the Sorbonne and later wrote on both these subjects. His musical writings, which include reviews for the *Mercure de France* and *Le monde*, reveal a particular sympathy for French music of the interwar period. He wrote the ballets *Les Sautons* (for Tomasi, 1938) and *Nautéas* (for Leleu, 1948), and the libretto for the mystery play *Lucifer*, with music by Delvincourt (1948). In 1949 his critical edition of the works of Flaubert won him the Prix National de Littérature, and in 1965 he was elected a member of the Académie des Beaux-Arts.

Dumitrescu, Gheorghe (b Oteșani, Vilcea district, 15 Dec 1914). Romanian composer. At the Bucharest Conservatory (1934-41) he studied composition with Jora, aesthetics, form and composition with Cuclm, conducting with Lazăr and Perlea, folk music with Brăiloiu and the violin with Florescu. From 1935 to 1946 he was a violinist, composer and conductor at the Bucharest National Theatre. He conducted the army arts ensemble (1947-57) and in 1951 was appointed professor of harmony at the Bucharest Conservatory. His theatre experience was put to good account in a number of operas and operettas, all showing a pre-eminently dramatic temperament expressed in ample forms, powerful contrasts and vivid colour. The oratorios share these features. Dumitrescu's themes are often taken from heroic tales of Romanian history and he has frequently employed folksong, particularly that of Oltenia.

Dumitrescu, Ion (b Oteșani, Vilcea district, 20 May 1913). Romanian composer. At the Bucharest Conservatory (1934–41) he studied harmony with Castaldi, counterpoint, fugue and composition with Jora, composition with Cuculin and conducting with Perlea. He taught harmony and solfège at the Bucharest Academy of Church Music (1939–41) and harmony at the Military Music Lyceum, Bucharest (1943–4), before joining the staff of the Bucharest Conservatory as professor of theory and solfège, and then of harmony (from 1948). Conductor at the Bucharest National Theatre from 1940 to 1947, he composed a great deal of incidental music. He was active in the Romanian Composers' Union from 1954, and was elected its chairman in 1963; in this position he did much to encourage young composers and musicologists. His own music is characterized by spontaneity and extrovert vigour, and makes extensive use of folk music, particularly that of Oltenia, which gives his scores their distinctive quality. A gift for vivid orchestration is evident in his important work for the cinema.

VIOREL COSMA

Dumka (from Cz. *dumat*, Pol *dumać* 'to ponder'). A type of Ukrainian folk music (see UNION OF SOVIET SOCIALIST REPUBLICS, §X, 2 (i)) whose name was adopted in Slavonic countries in the 19th century as a term for a sung lament and later as an instrumental piece with a ruminative, often melancholy and occasionally sullen character. The *duma* and its diminutive *dumka* (plural: *dumky*) were originally differentiated: the *duma* was an epic or ballad-like

narration, the *dumka* a lament. The terms, however, were used interchangeably by 19th-century scholars and composers and many 19th-century *dumky* incorporated features of both types.

In the 19th century the *duma* (or more usually the *dumka*) was revived in Poland, for example in Kurpiński's *Dumka włościan Jablonny* ('Dumka of the Jablonna peasants', 1821) and Moniuszko's song *Kozak* ('Cossack'), sub-titled 'dumka', which was one of the most popular songs of its kind in Poland (published from 1850 in many arrangements in Poland and western Europe). The *dumka* was later revived in the Ukraine, where it was used in instrumental works by composers such as M. A. Zavadsky, V. I. Zarembo, M. W. Lysenko and persisted into the 20th century. *Dumka*-like pieces were also written by Musorgsky, Tchaikovsky and Balakirev.

The most familiar use of the word, however, was in Bohemia. Dvořák had heard of the Ukrainian folk ballads and probably knew Moniuszko's *Kozak* when he first used the term for his *Dumka* for piano op. 35 (1876). There are *dumky* in his Slavonic Dance no. 2 (1878), in the slow movements of his String Sextet (1878), his String Quartet in E♭ op. 51 (1878–9), his Piano Quintet in A op. 81 (1887) and, most strikingly, in the set of six *dumky* that make up the *Dumky Trio* op. 90 (1890–91). Dvořák's conception of the *dumka* crystallized into the enunciation in slow-moving music of a pensive and melancholy mood, with a melody often subjected to figural variation (perhaps to suggest folk practice), it was sometimes interspersed with quicker sections that are cheerful and even ebullient. Together with the *furiant*, with which it was often coupled and contrasted, the *dumka* is the most prominent folklike element in Dvořák's music, its Slavonic (rather than purely Bohemian) origin being particularly appropriate to his pan-Slavonic approach to nationalism. Though Smetana wrote no *dumky* and there is only a single named example in Fibich, in his set of piano duets *Zlatý věk* ('The golden age', 1885), *dumka*-like pieces were written by most of Dvořák's pupils; the title occurs specifically in Janáček's String Idyll (1878), Suk's piano pieces op. 7 (1891–3) and op. 21 (1900) and in Novák's Three Pieces for violin and piano op. 3 (1899).

JOHN TYRRELL

Dümmler, Franz Anton. See DIMMLER, FRANZ ANTON.

Dumonchau, Charles-François (b Strasbourg, 11 April 1775, d Lyons, 21 Dec 1820). French composer. His musical upbringing was guided by his father, a cellist. He made rapid progress as a keyboard player, but this was checked by the outbreak of war. Employed in the administration of army rations, he somehow reached Paris, possibly in 1794. Here he became a friend of Rodolphe Kreutzer and is supposed to have entered the

Conservatoire, where Kreutzer was already a professor. If he did, he was never a prizewinner. Fétis claimed that he left to take lessons from Woelfl, though Woelfl only arrived in Paris in 1801. The truth is probably that Dumonchau, if he tried the Conservatoire, felt temperamentally unsuited to it, having come from a more intimate and stable musical background. Dissatisfaction with the capital may have prompted his final return to Strasbourg and then, in 1809, his move to Lyons, where he taught the piano and appears to have remained until his death.

Although his music had been forgotten even in Fétis's time, there is much to commend it. In the piano sonatas evident technical mastery is intelligently applied and the whole range of the keyboard is used when necessary. For example, op.28 no.3 (published after 1806) demonstrates control throughout the 169 bars of the slow movement, and the 2/4 *moto perpetuo* finale with its ingenious suggestions of counterpoint and key-exploration resembles Beethoven's op.54. The *Fables de La Fontaine* may have been organized as a kind of cycle. Their use of piano characterization, wit and command of melody deserve appreciation.

DAVID CHARLTON

Du Mont [de Thier], Henry (b. Villers-L'Évêque, nr. Liège, 1610; d. Paris, 8 May 1684) French composer, organist and harpsichordist. Du Mont replaced his Walloon family name, 'Thier', with its French equivalent, 'Mont', in the 1630s. When he was a boy his family moved to nearby Maastricht, and on 14 June 1621 he entered the choir school of the cathedral there. He was organist there from 1630 to 1632, when he received permission to study at Liège. His teacher was Léonard de Hodemont. One of his fellow students was Lambert Pietkin, whose later compositions so resembled those of Du Mont that sharp-eared Brossard (in his *Catalogue des livres de musique théorique et pratique*) surmised that the two had 'studied under the same master'.

Du Mont returned to Maastricht, perhaps after his teacher's death in 1636, remaining there until his departure for Paris in 1638. From 16 April 1643 until his death he was organist at the church of St Paul in the fashionable Marais district. From about 1652 to 1660 he served the king's brother, the Duke of Anjou, as organist and harpsichordist and in June 1660 became harpsichordist to the new queen, Marie-Thérèse.

He succeeded Veillot as *sous-maitre* of the royal chapel on 8 July 1663. The appointment he assumed was the half-yearly one beginning in July, and he shared the year with Gobert until third and fourth positions were created for Robert and Expilly in 1664. In 1669 Gobert and Expilly retired, leaving Du Mont and Robert to divide the year into alternating three-month periods. After Gobert's death in 1672, Du Mont and Robert each received the title of *Compositeur de musique de la Chapelle Royale*.

Soon after his wife's death (at an unknown date) Du Mont became Abbot of Notre Dame de Silly, a Norman monastery, and on 23 March 1676 was made honorary canon of the chapter of St Servais, Maastricht. In 1673 he was appointed *Maitre de la musique de la Reine*, a position he held until 1681. In 1683 Robert and Du Mont retired from the royal chapel, thus precipitating Louis XIV's great *concours* that year.

In the preface to his *Cantica sacra* (1652) Du Mont claimed to be introducing the basso continuo into France with this volume. Historically Du Mont's position cannot rest unchallenged, since the first work using continuo throughout and printed in France is Constantijn Huygens's *Pathodia sacra* (1647). However, Du Mont was the first to use figures and to print a separate continuo part: this highlights the extent of French musical conservatism in the first half of the 17th century – in his native Flanders continuo parts had been printed since 1616.

More important, Du Mont in his *Cantica sacra* gave France its first printed examples of the *petit motet* for two and three voices with continuo. This was a natural by-product of his exposure to Italian motets during his formative years in Flanders. In their false relations, chains of suspensions, affective melodic intervals and word-painting, the motets, hymns, litanies and *Magnificat* settings in the *Cantica sacra* clearly show the influence of an important part of the repertory of Flemish churches: the motets for two, three and four voices with continuo and occasional obligato violins by Alessandro Grandi (1), Cifra, Rovetta and others.

The 35 *petits motets* of the *Cantica sacra* are for two to four voices, all with continuo. Nine include optional viol or violin parts. *Cantate Domino* (no.28) is a concertato motet in which four solo voices alternate rigidly with a four-part chorus labelled 'omnes'; *Veni, Creator Spiritus* (no.34) includes sections in which a solo soprano alternates and combines with a four-part chorus.

Many of the motets exhibit the short, highly contrasting and mosaic-like structural divisions so typical of early Italian Baroque music. *Tristitia vestra* (no.5) and *Alleluia haec dies* (no.8) are examples of motets in several sections unified through the use of recurring passages and 'Alleluia' refrains; *O gloriosa domina* (no.26) is a long work, with two large sections each introduced by a 12-bar *symphonie* of two viols and continuo. The *Cantica sacra* includes two *symphonies* (nos.24 and 37), two *allemandes* (nos.25 and 40) and a *pavan* (no.23). The latter is in the polyphonic style of the late Renaissance fantasia. The *Allemanda gravis* that closes the collection includes an organ part in tablature for solo performance.

The preludes of the *Meslanges... livre second* (1657) introduce single or paired chansons. Most are scored for two viols (a third viol part was published in 1661), and

several can 'aussi servir pour l'orgue'. These preludes show considerable structural variety, foreshadowing the *symphonies* of the later *grands motets*. Some mirror only the form of the chanson, some are closely modelled on it, some subtly vary its melodic material, and others appear totally independent from it. Several resemble allemandes and sarabandes and are binary in structure, and a few base their formal design more on the constantly fluctuating metre and tempo found in some of the dances of the court ballets.

No documentation exists for a first book of *Meslanges* (1649) as listed by Fétis. The inclusion of 'avec la basse continue' in the title of this so-called first book is suspect in the light of Du Mont's own claim for priority three years later in the preface quoted above. It is possible that he viewed his *Cantica sacra* of 1652, the *Meslanges* of 1657, the *Motets à deux voix avec la basse continue* of 1668 and the *Motets à II, III et IV parties* of 1671 as constituting four large 'books' (they are so labelled by Brossard in his *Catalogue*) whose central theme is the *petit motet*.

In the Brossard Collection (in *F-Pn*) there is a *Dialogus de anima* (1668) in which the interlocutors are God, a sinner and an angel. Its organization into three scenes, each preceded by a *symphonie*, and its use of a *petit chœur* and *grand chœur* as well as solo *récits* justify Brossard's description of this work as a 'type of oratorio'. Five of the 30 motets included in the *Motets à deux voix* are organized as dialogues for specific characters such as sinners and angels or brides and bridegrooms. *O fidelis miseremini* (no.30; ex 1) shows Du

Ex 1 from 'O fidelis miseremini' (*Motets à deux voix*)

Mont's exploitation of the technique of dramatic monody. The affective intervals, repeated text fragments treated sequentially and the discreet chromaticism owe a debt to Carissimi and mark this work along with the dialogues as an important precursor of Charpentier's *Histoires sacrées*.

With the *Motets à II, III et IV parties* Du Mont moved the *petit motet* closer to French models. Co-existing with Italianate dialogues and pieces with echo effects are motets based on French dance rhythms. There is even a 'double-continuo' bass air (*Sub umbra noctis*) 'accompanied' by two violins. There is also more substantial use of *symphonies* and *ritournelles* to mark structural divisions within the longer motets.

In his *Airs à quatre parties* (1663) Du Mont joined Lardenois, de Gouy, Aux-Cousteaux and Gobert in setting to music the psalm paraphrases 'en vers françois' by Antoine Godeau, the dilettante Bishop of Vence. Most of the airs are simple, well-turned melodies in binary form. There is little Italian influence here. Du Mont obviously made an effort through asymmetrical phrasing, occasional shifts of metre and syllabic word-setting to simulate French dance music and French *airs*. The preface emphasizes the popular tone by informing us that, in spite of the fact that most are *airs 'à quatre parties'*, they may be performed with one voice and continuo and that for that reason the soprano and continuo were printed together.

The *Cinq messes en plain-chant* (1669) enjoyed great popularity even during Du Mont's lifetime. These plain-song masses are called 'messes royales' on the title-page, but they appear never to have been in the repertory of the royal chapel. They were reprinted many times and were performed especially in provincial churches up to the 20th century. Designed for convents and monasteries with few musical resources, their simple, generally undistinguished melodies have little in common with true Gregorian chant.

'Printed by the express order of His Majesty', we read on the title-pages of the collections of 50 *grands motets* by Du Mont. Robert and Lully published between 1684 and 1686. Created as much to glorify the King of France as the King of Heaven, these became the officially sanctioned models for later *grands motets* that formed the basic repertory of the royal chapel, the Concert Spirituel and provincial music academies up to the eve of the Revolution.

The 20 *grands motets* by Du Mont, published posthumously in 1686, were probably written during the 20 years he served in the royal chapel. The dedication to the king shows Du Mont embroiled in a stylistic conflict that resulted from changing from the simpler, more expressive style of the *petits motets* to the pompous, 'official' language of the *grands motets*:

Sire, several years ago I had the honour of presenting to your Majesty my motets for two voices. I have since ascertained that two voices are assuredly too weak to allow me to be heard on a subject on which I wish to express myself better and I imagined that Your Majesty would permit me to employ three or four voices. But, Sire, I begin to see that I have scarcely succeeded any better.

In order to 'succeed better', Du Mont greatly enlarged the models of Formé and Veillot by creating a series of unbroken episodes in which solo voice and ensemble were placed between music for the *grand* and *petit chœurs*. These episodes may border on the autonomous but more often merge or elide. The whole is usually preceded by a *symphonie*, while *ritournelles* may define structural divisions in the body of the motet.

The distribution of parts in a Du Mont *grand motet* remained more or less standard in the 17th century. Brossard described it in his *Catalogue*:

To perform them [Du Mont's motets] it is necessary to have five solo voices that constitute the *petit chœur*, including soprano, alto (counter-

tenor), two tenors and bass, five parts of the same distribution for the *grand chœur*, and five instrumental parts. Thus one should have a rather large group of performers: however, five solo voices, two violins, a *basse de violon* and a *basse continue* would suffice.

The introductory *symphonies*, like the preludes of the *Meslanges*, are very varied and are worthy of separate study. Those of *Quemadmodum desiderat* (no.19) and *O dulcissima* (no.16) are closed binary forms that resemble allemandes and have little to do with the music that follows them. *Confitebimur tibi, Deus* (no.4) begins with a *symphonie* of 35 bars, whereas *Domine in virtute tua* (no.6) begins with a tutti chorus. Perhaps the most impressive beginning is that of the *Magnificat* (no.13) in which Du Mont employs a *symphonie* of 21 bars based on the old Gregorian formula. The orchestral parts weave a contrapuntal fabric rich in dissonance which exposes genuinely independent part-writing closer to the composer's Flemish heritage than to the music of 17th-century France. Du Mont achieved more independence than either Lully or Robert in the instrumental accompaniments to the choruses. Normally the first violin doubles the soprano vocal line, leaving the second violin to embroider in free counterpoint, although in *Benedictus* (no.2) there is a counter-melody in the first violins that may be clearly heard against the five-part chorus.

Inspiration flags from time to time, for Du Mont was essentially a miniaturist. Some of the large syllabic choruses are dull and lack the compensatory propulsive drive of Lully's finest work in the genre. On the other hand, the five-part polyphony of a chorus such as 'Gloria Patri' from the *Magnificat* is worthy of Lalande. Du Mont excelled in the more intimate moments. For example, the countertenor-tenor duet 'Uxor mea' from *Beati omnes* (in the Brossard Collection) has a naturalness that rivals the best of the earlier *petits motets*.

Through his *grands motets* Du Mont achieved a position in French religious music 'somewhat comparable to that of Haydn in the symphony and string quartet' (Garros). They were impressive models for the next generation. Many of their devices were used by Lalande, whose first motets were probably contemporary with the last of Du Mont's.

JAMES R. ANTHONY

Dumoulin, Maxime (b. Lille, 2 March 1893, d. Châtelleraut, 16 May 1972). French composer. He was a choirboy at the cathedral Notre-Dame de la Treille in Lille, then studied keyboard and composition at the Ecole Nationale de la Musique there, and also played the cello. At the Paris Conservatoire he was a pupil of Samuel-Rousseau (harmony) and Vidal (fugue, composition), and he won, in 1919, several prizes. He became a professor at Poitiers Conservatoire in 1948. His compositions include ten masses, two symphonies, ballets and other theatre music, chamber music, piano music and songs. His works, a complete list of which is published by the Association des Amis de Maxime Dumoulin of Poitiers, have been praised for their strength of line and command of form.

Dump. A type of piece occurring in English sources between c1540 and c1640. About 20 examples are known, more than half of them for lute and most of the remainder for keyboard. The word is of uncertain derivation. In the 16th century it denoted mental perplexity or a state of melancholy. The musical dump was variously described as 'solemn and still', 'deploring' and 'doleful', there is some evidence to suggest that it was the English equivalent of the French *déploration* or *tombeau*, a piece composed in memory of a recently deceased person.

Ward lists 16 dumps, all anonymous except for two by John Johnson. Four more are included in the catalogue in Lumsden, among them one by John Dowland and one by Peter Philips. The earliest known dump, *My lady careys dompe* (in GB-Lbm Roy. App. 58, HAM no. 103), is familiar as an early example of idiomatic keyboard writing. It is written over an ostinato bass, a simple alternation of tonic and dominant (TTDD). Most other dumps share this type of construction, using similar bass patterns (DDTD, TTDD) or standard grounds such as the *bergamasca*, *passamezzo antico* and *romanesca*. Some later examples have different formal schemes, e.g. *The Irishe Dumpe* in the Fitzwilliam Virginal Book (ed. J. A. Fuller Maitland and W. B. Squire, Leipzig, 1899/R 1963).

no 179), which is a simply harmonized melody of three strains. An isolated late example of the genre is *An Irish Pump*, an instrumental tune printed in Smollett Holden's *A Collection of Old Established Irish Slow and Quick Tunes* (Dublin, c1806-7) and reprinted in *Grove 5*; Beethoven arranged it for voice and piano, to words by Joanna Bailie, in his *25 Irische Lieder*, WoO152, no.8 (c1810).

ALAN BROWN

Dunstable, John. See DUNSTABLE, JOHN.

Dūnāy. Sassanid single reed end-blown double pipe; see PERSIA, §3(ii).

Dunayevsky, Isaak Iosifovich (b Lkhvitsa, province of Poltava, 30 Jan 1900, d Moscow, 25 July 1955) Russian composer. He studied the violin with Akhron at the Kharkov Music School (1910-15) while teaching himself the piano and conducting student orchestras. At the Kharkov Conservatory (1915-19) he was a composition pupil of Bogatiryov. In the early 1920s he composed for the theatre and worked in propagating music through public lectures, journalism and directing amateur studies. He was music director of the Ermitazh and Korsh theatres, Moscow (1924-9), for which he composed ballet scores, and from 1926 to 1929 he was composer to the Moscow Theatre of Satire. His first major success was with the operetta *Zheniki* ('The bridegrooms', 1927), the forerunner of Soviet musical comedy. From 1929 to 1941 Dunayevsky was music director of the Leningrad Music Hall, a variety theatre, where, in collaboration with the popular singer Leonid Utyosov and his instrumental ensemble, he made the first fruitful attempts to adapt American commercial jazz styles to Soviet popular music. The film score for *Iesolye rebyata* ('The merry folk'), in which Utyosov and his jazz band also took part, established Dunayevsky as a favourite songwriter in Russia. Between 1938 and 1948 he directed the ensemble of the Leningrad House of Culture of Railwaymen. He was president of the Leningrad Composers Union (1937-41) and a member of the administration of the Soviet Composers Union from 1948. In 1936 he received the title Honoured Art Worker of the RSFSR and in 1950 he was made a People's Artist of the RSFSR.

Dunayevsky's major contribution was the renewal of Russian musical comedy, freeing it from the stereotype of Viennese operetta. His best works in the genre combine humour and lyricism, parodistic quotation and brilliant singing melody, with a gift for musical characterization and a unifying use of leitmotifs. The songs, lyrical or in march or hymn style, are inseparably linked with the spirit of the 1930s: vigorous, optimistic and enthusiastic, reflecting national pride and the awareness of collective power. The initial phrase of the *Pesni o rodine* ('Song of the motherland') from the film *Tsirk* ('Circus', 1936) was taken as the call sign of Moscow radio.

GENRIKH ORLOV

Duncan, Isadora (b San Francisco, 27 May 1878; d Nice, 14 Sept 1927) American solo dancer, the pioneer of modern dance. She had no formal training but evolved her own style of dancing, with bare feet and flowing draperies, and was the first dancer to appear on the stage without tights. Dancing was for her the expression of the mind and the soul, and she regarded classical ballet as unnatural. Drawing inspiration from ancient Greek arts, she attempted to express the emotions aroused in her by the music of great composers (including Beethoven, Chopin, Gluck, Schubert and Skryabin); in this she did great service to dance, for dancers had previously tended to use inferior music. At first she was censured by musicians, but eventually her good taste was admitted and even Cosima Wagner permitted her to dance to her husband's music at the 1904 Bayreuth Festival. Duncan's début in Chicago in 1899 was unsuccessful, but in Paris the following year she attracted respectful attention with her solo recitals. She subsequently performed throughout Europe, and in 1904 opened a school for children in Berlin; this was followed by others in Russia, Paris, Vienna and elsewhere, but none has survived. She visited Russia in 1905, 1908

Isadora Duncan

and 1912 and returned there in 1921, when she married the young poet Essenin. In Paris she attracted famous artists, writers and sculptors (notably D'Annunzio, Rodin and Bourdelle) and in 1904 began a long affair with Gordon Craig. Tragedy dogged her personal life: her attempts to found schools to perpetuate her art all failed, her three children all died young, Essenin committed suicide, and she herself was killed when her scarf caught in the wheel of a car and broke her neck. However, her influence as an artist increased after her death, together with the work of Loie Fuller and Ruth St Denis, her free style of dancing was the basis of modern dance as practised all over the world.

Duni, Antonio (b Matera, c1700; d ?Schwerin, after 1766). Italian composer. He was the son of Francesco Duni, *maestro di cappella* in Matera, and the elder brother of Egidio Duni. He is said to have studied under Nicola Fago at the Turchini Conservatory in Naples. After a period at the archiepiscopal court in Trier he moved to Madrid, where he produced two zarzuelas in 1726 and 1727. He is alleged to have been a friend of Farinelli and to have served the Duke of Osuna as *maestro di cappella* and music teacher. In September 1755 he arrived in Schwerin as *maestro di cappella* of an Italian opera troupe, but soon lost his post by undertaking a lawsuit against the troupe's director, Nicolo Peretti. In September 1757 he went to Moscow, where he taught at the university and gave private lessons. After teaching in Riga in 1765–6 he returned to Schwerin, where on 5 July 1766 he petitioned the

Duchess Louise-Friederike of Mecklenburg for a post and security for his wife and four children.

KENT M. SMITH

Duni, Egidio (Romualdo) [Duni, Egidio (Romuald)] (b Matera, Basilicata, baptized 11 Feb 1708, d Paris, 11 June 1775). Italian composer. He was one of the most important *opéra comique* composers in the third quarter of the 18th century, helping to create a new musical style in that genre, the *comédie mêlée d'ariettes*, through the blending of Italian elements with the traditional French ones.

1. LIFE. Duni was the fourth son of Francesco Duni, *maestro di cappella* in Matera, and the younger brother of Antonio Duni, also a composer. He is usually said to have studied from the age of nine at the Loreto Conservatory in Naples, but then, having become friendly with Durante, to have transferred at his instigation to the Turchini Conservatory. However, Durante in this period taught only at the Conservatorio dei Poveri di Gesù Cristo, and there only from 1728. In 1735 Duni's *Nerone* was the second Carnival opera at Rome's Teatro di Tordinona. The failure of the first opera, Pergolesi's *Olimpiade*, and the relative success of *Nerone* have fostered several 'historical' plays in which Duni is portrayed as a villain partly responsible for Pergolesi's premature death. The original anecdotes, however, all suggest Duni's humility, embarrassment and indignation at his undeserved triumph over his friend.

According to *Le nécrologe des hommes célèbres de France*, an essential but untrustworthy source, Duni was at this time charged by a certain Cardinal C. with a secret papal mission to Vienna. After composing operas for Rome and Milan in Carnival 1736, he went to London, where his *Demofoonte* was performed in May 1737. On 22 October 1738 he matriculated at Leiden University. According to Goldoni's memoirs, Duni's search for a cure for his occasional hypochondria led him at this time to the celebrated Dr Boerhaave, whose prescription 'to mount a horse, enjoy yourself, live normally and keep away from medicines' was effective, but no more so than Boerhaave's daughter, 'young, rich, pretty and single'.

Duni had operas performed at Milan in 1739 and at Florence in 1740 and 1743. There are unsubstantiated reports as well of his return to Matera, travel to Venice and encounter with bandits near Milan. On 16 December 1743 he was appointed *maestro di cappella*

of S Nicola di Bari. In this period he produced an oratorio, *Giuseppe riconosciuto*, and saw his *Catone in Utica* performed in Naples in 1746. With *Ipermestra* and *Ciro riconosciuto* (both Genoa, 1748), Duni is said to have come to the attention of the Duke of Richelieu and Philip, Duke of Parma. Soon after, he became court *maestro di cappella* in Parma and music teacher to the duke's daughter Isabella, later Empress of Austria.

With *Olimpiade* (Parma, Carnival 1755) Duni's career as an *opera seria* composer came to an end, while Goldoni's arrival in Parma in May 1756 led to his collaboration on Duni's last Italian opera, *La buona figliuola* (Carnival 1757), better known through Piccinni's famous setting. In the French atmosphere of

by Monnet as parodied after an Italian intermezzo, Duni's dedication and *avertissement*, as well as the music itself, offer convincing evidence that the work was not only originally composed in French, but in fact conceived as a rebuttal of Rousseau's claim that the French language was unsuitable for music. *Le peintre* enjoyed a brilliant success and, in its blend of vaudeville tunes and natural, expressive French declamation within an Italian musical idiom, served for several years as a model *opéra comique*.

Released with a pension from his post in Parma, Duni settled in Paris, married and, during 1758–60, strengthened his reputation with several works that gradually eliminated vaudevilles and combined Italianate *ariettes* and recitatives with other more characteristically French elements *airs* in dialogue, small ensembles and divertissements. *L'isle des foux* (1760), in particular, is a fine example of Duni's skill in musical characterization. In 1761 the Comédie-Italienne, then directed by Favart and Corby, appointed him its music director, but, ironically, several of his new works for this theatre failed miserably. In August 1761 he indignantly replied in the *Mercure de France* to hostile criticism of his *La bonne fille* (June 1761), while a private letter dated January 1762, published by Tiersot, shows that he was also in conflict with Favart at this time. However, his collaborations with Anseaume – *Mazet* (1761), *Le milicien* (1763), *Les deux chasseurs et la laitière* (1763), the unusually dramatic *L'école de la jeunesse* (1765) and *La clochette* (1766) – were very successful. These works, as well as two ambitious collaborations with Favart, *La fée Urgèle* (1765) and *Les moissonneurs* (1768), were published in Paris and adapted, translated and imitated all over Europe. They held the stage in France until nearly the end of the century.

During the 18 months between the première of *La clochette* in July 1766 and that of *Les moissonneurs* in January 1768, Duni apparently made a trip to Italy about which little is known (he attended a performance of *La fée Urgèle* in Marseilles in July 1767). On his return to Paris he soon met with Grimm's harsh and unjust suggestion that he 'would do well to give up composition, since his trip to Italy had not refreshed his head'. Despite similar but milder criticism, Duni's next work, *Les sabots*, had a modest success, and on 26 November 1768 both he and Favart were given pensions by the Comédie-Italienne. After *Thémire* (1770) he retired, continuing to teach and occasionally to judge musical competitions.

Duni's son, Jean Pierre (b Paris, 21 September 1759), was the composer of a set of three keyboard sonatas with violin accompaniment (Paris, 1778).

2 WORKS. Scattered and poorly catalogued sources make a comprehensive view of Duni's Italian career very difficult. The four works for which most of the music survives, *Nerone*, *Catone in Utica*, *Giuseppe riconosciuto* and *Olimpiade*, as well as substantial fragments from *Demetrio*, *Demofonte* and *Ipermestra*, reveal a composer who, while always respecting the established formal and harmonic conventions of his day, nevertheless achieved effective dramatic characterizations through grateful vocal phrases of considerable variety. Duni's principal importance, however, lies in his decisive role during the formative years of the *comédie mêlée d'ariettes*. His rapid assimilation of the various currents of the French musical environment and,

Egidio Duni watercolour (c1760) by Louis de Carmontelle in the Musée Condé, Chantilly

the Parma court Duni had been attracted to the *opéra comique*. He is often said to have written, during his stay in Parma, the music for two Favart librettos in this genre, *La chercheuse d'esprit* and *Ninette à la cour*, but this is highly doubtful in both cases, although not impossible (corroborating evidence is limited to a 1751 libretto, *La sémplce curiosa*, an Italian version of *La chercheuse d'esprit*, performed in Florence). Nor has it been proved that any of Duni's music was used in the pastiche *Ninette à la cour* performed in Paris in 1755. Jean Monnet, director of the Paris Opéra-Comique, reported in his memoirs that in the autumn of 1756 he received a request from Parma for a French libretto for Duni, who wished to write an opera for Paris. The result was Louis Anseaume's *Le peintre amoureux de son modèle*, for whose first performance, 26 July 1757, Duni went to Paris. Although the piece was announced

especially, his sensitivity to the demands of natural and expressive French musical declamation earned him the respect not only of the general opera public, but also of many of the most educated and influential minds of Paris. His friendship with Diderot to whom he introduced Goldoni on the latter's arrival in Paris in 1762 resulted in effusive, even excessive praise in *Le neveu de Rameau*. Grimm's usually enthusiastic admiration, though warped by his blind passion for anything Italian at the expense of everything French, nevertheless reflected the position of Duni's works, along with those of Gluck and Laruelle, among the earliest and finest examples of the new type of *opéra comique*.

Duni's failure to keep pace with the genre he himself had helped to create was perhaps inevitable. The frequent criticisms of his orchestration, however, seem unjust; *L'isle des foux*, *Les deux chasseurs*, *La fée Urgèle* and *Le rendez-vous* all reveal imaginative orchestral details, in spite of the small orchestra available. Symptomatic of his limitations (especially of his lack of harmonic originality) was his refusal early in 1763 to undertake the correction and preparation for publication in Paris of Gluck's *Orfeo ed Euridice*, in which he saw little except copying errors and passages of shocking violence.

Because Duni knew his own abilities and sensed the needs of his audience to a remarkable degree, he became the first composer to give the mid-18th-century Parisian public repeated exposure to what it wanted: French music with Italian spirit, usually in delightful pastoral settings touched by sentimentality. His success was very great, but died away with the society that had fostered it

KENT M. SMITH

Dunicz, Jan Józef (b Lwów, 3 May 1910; d Dora, 3 April 1945). Polish musicologist. He studied music at the Lwów Conservatory until 1930 and musicology at the university there from 1928 to 1933, specializing in 18th-century Polish music. Between 1934 and 1937 he was Adolf Chybiński's assistant in the university and his doctorate dissertation, *Adam Jarzębski i jego 'Canzoni e Concerti'*, was published at Lwów in 1938. The following year he was appointed to a post in the Ministry of Education but after the German invasion he went into hiding and taught music in secret until his arrest in

April 1944. He died in a concentration camp a year later.

GERALD ABRAHAM

Duniecki, Stanisław (b Lwów, 25 Nov 1839; d Venice, 16 Dec 1870). Polish composer. He studied the piano and composition under J. K. Kessler, then in Leipzig (1854–8), Vienna (from 1859), Brussels (with Fétis) and Paris, where he had some lessons in orchestration from Berlioz. Returning to Poland in 1863, he took charge of the orchestra at a small Polish theatre in Czernowicz (now Chernovtsy). In 1864 he was appointed conductor at the Lwów theatre, where he staged his most famous operetta, *Pazowie Królowej Marysięki* ('Queen Mary's pageboys'), a work in the tradition of Kurpiński and Stefani. Hoping that the operetta would be performed in Warsaw, Duniecki spent some time there reviewing for the weekly journal *Kłosy*. However, as the Warsaw Opera did not stage the work, he accepted the post of conductor at the Kraków theatre, where it was performed in 1865. Duniecki staged Moniuszko's *Halka* (1866) and *Verbum nobile* (1867), as well as several of his own operas, but despite his efforts, the Kraków Opera did not survive. He also wrote articles for the weekly *Kalina*. Duniecki left Poland in 1867, visiting Romania and Merano and finally settling in Venice.

WORKS

(lost unless otherwise stated)

STAGE

- Korylla (operetta, 1. P. Duniecki, after Fr. novel), Lwów, 18 May 1859
Kowal z przedmieścia Pragi [The blacksmith from the Prague suburbs] (melodrama), Czernowicz, 1864
Nędznic [The soundiels] (melodrama, after Hugo Les misérables), Czernowicz, 1864
Pazowie Królowej Marysięki [Queen Mary's pageboys] (operetta, 2. P. Duniecki, after W. Pol. Obrzy [The pictures]), Lwów, 16 Dec 1864, *PL-K*, extracts ed. Wildt (Kraków, 1870)
Dożynki czyli Pierwsze wrazenia [The harvest festival or First impressions] (comic opera, 2. J. Jasinski), Kraków, 29 Oct 1865
Odaliski (operetta, 2. P. Duniecki), Kraków, 9 Jan 1866
Pokusa [The temptation] (comic opera, 1. S. Duniecki), Kraków, 24 April 1866, as Chochlik [The gnome], Lwów, 1869, as Sotek [The imp], Prague, as Der Teufel ist los, Poznań and Berlin, as Lucifer, Vienna
Doktor Pandolfo (operetta), Kraków, 1866
Zemsta Stasi [The vengeance of Stasia] (melodrama), c. 1867
Łoczki panny Proci [Miss Proci's curls] (melodrama), c. 1867
Igor (opera, inc., P. Duniecki and J. Turski), 1866–9

Incidental music: Kasper Karlinski, 1862, K. Szajnoch, Stasio, 1866

OTHER WORKS

- Sym., perf. Lwów, 20 Oct 1858
Songs, incl. Wiosnianki [The youthful ones] (B. Zaleski), 1862, Co tam maryc o kochaniu [Why dream about loving] (M. Romanowski), Biedne serce u dziewczyny [Poor is the girl's heart], Upominek [The gift]

IRENA PONIATOWSKA

Dunkeld Antiphoner (GB-Eu 64). See SOURCES, MS, §IX, 19.

Dunn, Geoffrey (Thomas) (b London, 13 Dec 1903). English producer, librettist, translator and tenor. He studied at the RAM and then worked there as a teacher and producer, 1928–39. He sang with Nigel Playfair's

company at the Lyric Theatre, Hammersmith, and took part in amateur performances of works then seldom heard, including *Idomeneo*, he also gave recitals. He prepared several 18th-century English operas for the Intimate Opera Company, which he formed in 1930 with Margaret Ritchie and Frederick Woodhouse, and with which he was associated until 1939. Before the war he wrote librettos for Brian Easdale and Herbert Murrill. His other librettos were written for Malcolm Williamson *English Eccentrics* (1964), *Julius Caesar Jones* (1966) and *Dunstan and the Devil* (1967). As a producer he staged *Don Giovanni* (1949) and *Dido and Aeneas* (1951) for Sadler's Wells Opera. Most notable among his many translations, mostly done for the BBC, are Handel's *Seerse*, *Don Giovanni*, *Beatrice et Bénédict*, *Orphée aux enfers* and *La belle Hélène*. The last two, used throughout the 1960s and early 1970s by Sadler's Wells, were particularly felicitous. After World War II he gave up singing almost entirely to concentrate on acting, but appeared in a semi-singing part in the famous first production of Sandy Wilson's *Valmouth* in 1958.

ALAN BLYTH

Dunn, Thomas (Burt) (b Aberdeen, South Dakota, 21 Dec 1925). American conductor. Brought up in Baltimore, he studied there at the Peabody Conservatory and at Johns Hopkins University, and later at Harvard and at the Amsterdam Conservatory. His teachers included Charles Courboin, Virgil Fox, E. Power Biggs and Ernest White for organ; Robert Shaw, G. Wallace Woodworth and Ifor Jones for choral conducting, Gustav Leonhardt for harpsichord; and Anton van der Horst for orchestral conducting. He held church appointments in Baltimore and Philadelphia, and in 1957 became music director at the Church of the Incarnation, New York. His reputation spread, and in 1959 he was appointed music director of the Cantata Singers, impressing particularly with performances of Handel's *Belshazzar* and Rameau's *Les Indes galantes*, and expanding the group's repertory to include 19th- and 20th-century music. He founded the Festival Orchestra of New York (1959, disbanded in 1969). In 1961–2 he became known to a wider public through a series of Bach concerts in Carnegie Hall, giving the B minor Mass with 25 singers and 26 players, forces approximately equal to Bach's. He gave four performances of *Messiah* in 1963, each in a different version. In 1967 he became music director of the Handel and Haydn Society, Boston, which he converted from a conservative choral society to a forward-looking organization whose concerts are highly diversified. He believes that scholarship makes it easier to arrive at convincing performances using appropriate forces. His performances are clean, transparent, rhythmic, and, in a broad repertory from Schütz to Dallapiccola and Stravinsky, he is particularly effective in works with chorus. He has taught at many universities and music schools in the USA.

MICHAEL STEINBERG

Dunning, Albert (b Arnhem, 5 Aug 1936). Dutch musicologist. He studied with Bernet Kempers and Smits van Waesberghe at the University of Amsterdam (1959–65), where he received the doctorate in 1969. From 1968 to 1970 he taught at the University of Tübingen. In 1970 he was a Fellow of the Istituto Storico Olandese in Rome, and then joined the faculty

of Syracuse University, New York, first as a visiting professor in September of 1971, then as a professor of the university's foreign course at Poitiers. He has written on two 18th-century music publishers, Joseph Schmitt (the subject of his dissertation) and Gerhard Witvogel.

Dunning's other 18th-century studies include the music of Pergolesi and Locatelli and Mozart's canons, which he edited for the *Neue Mozart-Ausgabe*. As a Renaissance scholar he has written an important monograph on the Staatsmotette (music composed specifically for ceremonial or state occasions), in which he examined the social and political circumstances surrounding these pieces and attempted to show their distinguishing stylistic traits.

PAULA MORGAN

Dunstable [Dunstaple, Dunstapell, Dumstable], **John** (b c1390; d 24 Dec 1453). English composer. He was the most eminent of an influential group of English composers active in the first half of the 15th century; his importance was recognized, during his lifetime and long after his death, by commentators of several nationalities.

1 Life 2 Posthumous reputation 3 Works 4 Style and structure

1. LIFE. Dunstable's earliest surviving works date from c1410-20, which suggests a birthdate of about 1390. Nothing certain is known about his career. Many attempts have been made to identify him: for example, with a John Dunstavyll, who was a prebendary of Hereford Cathedral 1419-40. However, there is still no firm evidence linking his name with any cathedral or monastic establishment, or with the Chapel Royal. He

may at some time have been in the service of the Duke of Bedford: an astronomical treatise survives in St John's College, Cambridge, with a Latin inscription to the effect that 'this little book belonged to John Dunstable *cñ*, musician to the Duke of Bedford'. (The meaning of *cñ* is unclear; it has been interpreted as 'canonicus', which would marginally strengthen the Hereford identification.) This tenuous evidence is the sole basis for the widely held assumption that Dunstable accompanied Bedford to France during the latter's regency (1422-35). The town of Dunstable, fortuitously, is in Bedfordshire, and the London church in which Dunstable was buried belonged to the Duke of Bedford until 1432.

The date of death derives from an epitaph in Latin describing him as 'prince of music'. Stow recorded the inscription, in St Stephen's, Walbrook, before it was destroyed in the Great Fire of London. It includes the words 'In the year 1453, on the day before Christ's birthday, the star passed over into the heavens'.

Claudatur hoc tumulo qui coelum pectore clausit
Dunstaple Joannes Astrorum concitus ille
Indice novit Urania abscondita pandere coeli
Hic vir erat tua laus, tua lux, tibi musica princeps.
Quique tuas dulces per mundum sparserat artes
Anno Mil C quater semel l. tria juncto Christi
Pridie natalem, sidus transmigraat ad astra
Suscepit proprium civem coeli sibi leveis

A second epitaph 'upon John Dunstable, an astrologian, a mathematician, a musician, and what not' thus headed by Weever, who reported it in his *Ancient Funeral Monuments* (1631) as the tribute of John of Wheat-hampstead, abbot of St Albans, begins 'This musician, another Michalus, this new Ptolemy, this younger Atlas supporting the arc of the heavens, rests beneath the ashes'.

Musicus hic Michalus alter, novusque Ptholomeus,
Junior ac Athlas supportans robore celos
Pausat sub cinere, melior vir de muliere
Numquam natus erat, vici quia labe carebat.
Et virtutibus opes possedit vincens omnes
Cur exoptetur, sic optandoque precetur
Perpetuis annis celebratur fama Johannis
Dunstapil, in pace requiescat et hic sine fine

Dunstable's pre-eminence was first noted by Martin le Franc (1440) in a famous passage which implies that Dunstable had by then reached the height of his powers insofar as they were to influence continental composers. Two further volumes of astronomical treatises, associated with him and possibly autograph, can be dated respectively 1438, and not before 1421. It has been suggested that his later years may therefore have been more actively concerned with astronomy than with music.

2. POSTHUMOUS REPUTATION. Tinctoris mentioned Dunstable three times. He declared in 1477 that only music written during the last 40 years was considered by the learned to be worth hearing. Whereas Martin le Franc had stressed the dependence of Dufay and Binchois upon Dunstable, Tinctoris named Ockeghem, Regis, Busnois, Caron and Faugues as having learnt their art from all three earlier men. Dunstable heads the lists of celebrities given by the English Carmelite, John Hothby, and by a Spanish theorist of 1482, who followed Tinctoris in dating the 'new art' or 'great flowering' from c1440. He is named in Crétin's *déploration* on the death of Ockeghem and Eloy d'Amerval's *Livre de la déablerie* (1508) where, in a

vision of paradise, the poet saw the great musicians, directed by Dunstable and Dufay, composing hymns of praise for the angels to sing. Gaffurius mentioned Dunstable in his *Practica musica* (1496), quoting the tenor of *Veni Sancte Spiritus* (no.32) and citing him as an authority for the use of passing notes. Spataro and Giovanni del Lago referred in their correspondence (1529) to isorhythmic tenors by Dunstable, specifically mentioning *Preco prehemencie* (no.29).

Dunstable alone came to be credited with innovations for which the English school as a whole was responsible. Tinctoris had described him as 'primus inter pares' ('first among equals'). Achievements of preceding centuries also came to be ascribed to him. This arose from a misreading of Tinctoris by Sebald Heyden (1540) who, believing valid polyphony to be only a century old, ascribed its invention to Dunstable, who thence became known as the 'inventor of counterpoint'. This led to further confusion with the 10th-century English saint Dunstan which was put right by Hawkins. The claim that Dunstable wrote a musical treatise (as Hawkins also believed) was first made by Ravenscroft (1614), but his 'quotation' is in fact translated from the treatise *Quatuor principalia* of 1351, ascribed in one source to Tunstede. Ravenscroft presumably confused the latter with Dunstable. Two copies of Jehan des Murs' *Libellus cantus mensurabilis* ascribe the final music example to Dunstable (no.29): this might have appeared to apply to the whole treatise.

Most of the known references to Dunstable were assembled by Lederer and Davey. Bukofzer presented this material in more critical fashion, but his main contribution to Dunstable scholarship was in assembling and editing the musical works.

3 WORKS Of the works listed below, no more than 20 are known to have been copied in English sources. Most of Dunstable's extant music is known from the large Italian and German MS collections now at Trent (*I-Trnn*, *Trmd*. 41 pieces plus duplicates), Modena (*MOe* 32), Aosta (*AO*: 24), Bologna (*Bc*. 6, *Bu* 2), Munich (*D-Mhs*: 6) besides smaller sources. This led to the once popular assumption that Dunstable must have spent part of his life in Italy. Archival searches have not confirmed this hypothesis, which has also been weakened by recent discoveries of further English sources.

There are 51 items bearing uncontradicted ascriptions to Dunstable. The remaining works listed are either unscribed or have conflicting ascriptions in different sources. Many other works surviving in the continental MSS are anonymous or labelled simply 'Anglicanus' or 'de Anglia'. More works by Dunstable are undoubtedly camouflaged in this way. Stylistic analysis does not yet form a secure basis for attributing these to individual composers, except in rare cases. Distinct personal styles are only beginning to emerge: it is not always easy to distinguish between the continental survivals of Leonel Power and Dunstable. The uncommonly high number of contradictory ascriptions to these two men served to fuel the long-discredited notion that they were one and the same composer. A similar identity was once proposed for Dunstable and Benet.

Three works not printed in MB, viii (2/1970), are shown in the list of works below: a *Magnificat*, the ballade *Je languis*, and the carol *I pray you all*. The great bulk of the English carol repertory is anonymous,

but it is highly probable, on statistical and stylistic grounds, that Dunstable wrote some. (Note, for example, the carol-like phrase structure of the Gloria settings, nos.4 and 7.) Both the *Magnificat* and the ballade have also been attributed to Dufay. Two further pieces are included in the list of works although they are apparently not extant. One is another *Magnificat*, described as 'Dunstabylls *Exultavit*' in an inventory dated 1529 from King's College, Cambridge. The other, also a late copy, is the *Gaude flore virginali* in five parts, recorded in the index of the Eton Choirbook but no longer surviving in the main part of that MS. (Several anonymous settings of this text survive: one which fits this description occurs in the same MS as another Dunstable work, and is credibly Etonian if unlike any known work by Dunstable.)

But doubt exists even in works which bear ascriptions to Dunstable, too little is yet known of the authority and interdependence of sources. For example, Bukofzer gave the Mass *Rex secularum* to Dunstable because he regarded Aosta as more reliable than the composite Trent sources where it is assigned to Leonel Power; yet six pieces with unique attributions in Trent should, by the same logic, come under suspicion. Parts of these sources are closely related and do not have independent authority. Bukofzer elsewhere accepted the joint authority of Aosta and Trent (Leonel) over that of Modena (Dunstable) and gave an *Alma Redemptoris* to Leonel. But if Modena were consistent in its attributions to composers, Dunstable would by the same reasoning lose eight of his 12 isorhythmic motets, perhaps to Leonel who apparently wrote none. Even unique, uncontradicted ascriptions may thus not be reliable. Bukofzer accepted the attribution of *O rosa bella* to Dunstable, although it is stylistically suspect.

Very little has been done towards a chronology on the basis of musical style, and precise datings for individual pieces are elusive. There is evidence of a *Preco prehemencie* being performed in 1416, and this may possibly have been Dunstable's setting. Henry VI's coronation in Paris in 1431 has been suggested as the occasion for *Veni Sancte Spiritus* (no.32) and the Mass *Da gaudiorum premia*. Yet the position of the former in the Old Hall MS suggests a date before 1420, and the mass, which uses a Trinity respond, may as well have been written for the marriage of Henry V and Catherine on Trinity Sunday 1420, shortly after the Treaty of Troyes, to which the text is well suited. A few pieces, including *Quam pulchra es* (no.44), can be dated before 1430 because they are already present in MSS compiled around this date. If these are early works, it is hard to find any advance in isorhythmic treatment, declamation, and sonorous, consonant writing elsewhere.

4 STYLE AND STRUCTURE. Bukofzer defined seven categories for the stylistic classification of Dunstable's works (most recently in *NOHM*, iii, 186). These are in fact partly structural, partly stylistic. They often overlap or adjoin and may be simplified as in the following discussion.

Isorhythm. a plainsong tenor is the lowest of three or four parts (except in *Salve scema sanctitatis*). The isorhythm may apply to the tenor only (as in the mass settings and *Specialis virgo*) or to all voices (as in most of the motets). Sometimes there is an introduction or postlude external to the isorhythmic structure. The motets usually have three sections with tenor reduction

in the ratio 3:2:1 or 6:4:3, each subdivided into two or three *taleae*. The traditional conflicting texts, so alien to declamatory principles, are retained in all the motets except *Specialis virgo*, though they are often related by vivid alliteration (as in *Preco preheminentie principe precessit* [*Precursor premititur populum parare*]).

Plainsong basis but non-isorhythmic: the plainsong may be in any of the three parts (see list of works). If the plainsong is in an upper voice it is more likely to be ornamented (e.g. *Ave regina celorum*, *Regina celi*).

'Free treble' or 'ballade' style: compositions with a freely composed melodic line and two slower supporting parts form the greater part of Dunstable's output, and it is probably on these that his innovating reputation depends. Traces of plainsong paraphrase are, however, constantly turning up in apparently 'free' trebles (Kyries, nos.69 and 71, *Alma Redemptoris mater*, no.40, *Descendi in ortum meum*, no.73, *Veni Sancte Spiritus*, no.32).

Declamation: the music of *Quam pulcra es* (no.44) is conceived as a vehicle for the clear presentation of the text. Accentuation is careful, and most syllables fall simultaneously. No other piece is declamatory to this degree. Short passages in *Salve regina mater mire* (ex. 1a) and *Sancta Dei genitrix* are textually focussed in only two and one voices respectively. *Descendi in ortum meum*, probably a late work, shows staggered declamation, as in ex.1b.

Ex. 1(a)

The main initiative towards linking pairs of mass movements, and eventually to unifying all movements of the Ordinary by the use of a single tenor, seems to have been taken jointly by Dunstable and Power (though the early cyclic masses are badly plagued by conflicting ascriptions). Of the pairings presented by Bukofzer, only two bear scrutiny, and these may be remnants of complete mass cycles, dismembered by accidents of copying and survival, as can now be shown for the cycle on *Da gaudiorum premia*. Many apparent pairings of Gloria and Credo, Sanctus and Agnus, may be accentuated by a continental scribal habit of pairing movements which have no intrinsic connection, and also by their failure to record many troped Kyries belonging to English masses. The natural affinity between, respectively, syllabic and melismatic movements, may effectively disguise loosely unified cyclic masses. Dunstable used isorhythm in two of the cycles (or partial cycles) for which his authorship is

uncontradicted. Another pair (nos.11 and 12), in four parts, is linked by parallel structure (vocal scoring and mensurations). The Mass *Rex seculorum* bases all five movements on a common tenor in different rhythmic dispositions. The tenor of the Mass (nos.71, 56-9) shows considerable melodic freedom as well. There is, as yet, no use of unifying mottos in the upper parts.

The techniques of composition outlined above give little impression of Dunstable's personal dialect of the English musical language (insofar as it can be extricated from that of his contemporaries and disciples), which is evident over the whole range of his compositions.

What then characterized the *contenance angloise* (see MARTIN LE FRANC) as it was practised by Dunstable? The melodic lines of his upper voices are made up of at least four types of movement: a basically conjunct progression with few leaps, short note values and virtually no rhythmic tautology (as in ex.2a). The stepwise motion may alternate with 3rds, creating interesting asymmetrical patterns, and with a similar avoidance of rhythmic tautology (ex.2a, bars 64-6, and ex.2b). Again, the movement may be largely triadic, with very little stepwise movement, and usually perceptibly slower than the more conjunct lines (as in ex.2c). The melodic line often unfolds very gradually, exploring all the possibilities of the notes first presented before higher or lower ones are added. A rising triadic phrase (ex.2d, or variants upon it), often rising to the major 6th, opens many of Dunstable's compositions. Finally, he sometimes used a declamatory line with many repeated notes, often syllabic in texting, but not necessarily well declaimed by later standards (ex.2e).

In combining voices, we may find an interplay which is almost hocket-like (as in ex.3a). Rhythmic imitation is a natural consequence of this relationship, but is rarely extended for more than two bars. The few examples of pitch imitation are confined to one bar, even when the imitation could have been continued: Dunstable clearly did not regard imitation as a virtue to be practised wherever possible (ex.3b, involving three of the four voices, is one of the most advanced examples). This kind of textural interplay is sometimes found in conjunction with the declamatory and triadic types of melodic line, as in ex.3c, where the declamatory style is applied to the textless Amen.

The harmony is predominantly major in sound, and dissonances are usually approached with care. (The dissonances in ex.3c arise only between the middle two parts and result from independence of line; in ex.3b, bars 70-71 are abnormally rough, but the sources are unanimous in this reading.) The so-called 'pan-consonant' style (*Quam pulchra es*, no.44, and *Sancta Maria non est*, no.48, provide good examples) owes much to the harmonic use of the 3rd to yield maximum sonority, as well as to its melodic use in exposed positions (ex.1a).

Most of his music is in three parts, except for the isorhythmic motets, which are mostly for four. Lengthy duets occur within all these styles (though not always in shorter pieces) and may occupy as much as a third of a composition. It is in duets that the English handling of discant is seen at its most perfect, with a high proportion of vertical 3rds and 6ths (characteristic intervals in any case between discantus and tenor parts in English compositions), but rarely more than three or four successive parallel intervals (see ex.3d). In the duets between the upper voices of isorhythmic motets, parallel motion is often avoided by crossing of parts. Duets and full sections (marked in some MSS for soloists and chorus respectively) are often contrasted by the use of faster note values and harmonic rhythm for the former.

Although the two lower parts of a three-part piece may be virtually equal in range, the contratenor tends to be higher in tessitura and more rhythmically active than in average contemporary continental pieces. This may be linked with an English tendency to supply text for contratenor parts in some mass settings, text which was usually ignored by continental scribes.

The overwhelming majority of Dunstable's works start in triple time. Duple-time openings are confined to four mass movements, one antiphon and *O rosa bella*. Except in a few short pieces (and the longer, anonymous Credo, no.10), which are in triple time throughout, there is usually a change to duple time about midway, and there may also be a shorter, final return to triple time towards the end.

Magnificat (2 versions)	3	36, 36a	Plainsong of canticle in first voice, 2nd version alternatim
Magnificat	3		Not extant, see §3 above
Magnificat	3		Also attrib Dulay, attrib Dunstable in <i>D-Mhs</i>
O crux gloriosa	3	53	Processional ant sung before the cross Vespers Saturday after Trinity Sunday
Quam pulcra es			Processional ant to the BVM, 'Dunstapell' erased, 'Egidius' added, in <i>I-AO</i> (see BINCHOIS, <i>GUTHS DI BINS DIT</i>)
Regina celi	3	38	Marian ant, plainsong in first voice
Salve mater salvatoris	3	62	Sequence to the BVM also attrib Leonel Power
Salve regina mater mire	3	45	Marian ant, trope of 'Salve regina'
Salve regina mater misericordie	3	63	Trope 'Virgo mater', als attrib Leonel Power
Salve regina misericordie	3	46	Marian ant trope 'Virgo mater'
Sancta Dei genitrix	3	47	For the Office, All Saints' Day
Sancta Maria, non est tibi similis	3	48	Processional respond and ant to the BVM
Sancta Maria, succurre miseri	3	49	Marian ant for the Magnificat
Speciosa facta es	3	50	Processional ant to the BVM
Sub tuam protectionem	3	51	Marian ant for Vespers of the Conception and Nativity of the BVM, 2 keyboard arrs in the Buxheim Organbook extant (MB, nos 51a b)
ISORHYTHMIC MOTETS			
Albanus roseo rutilat/Quoque ferendus eras/Albanus domini laudans	3	23	To St Alban, ant 'Primus in anglorum' from rhymed Office 'Inclita martyr' in T
Ave regina celorum, ave decus/Ave mater expers pans/Ave mundi spes Maria	3	24	To the BVM, seq 'Ave mundi spes' in T
Christe sanctorum decus/Tibi Christe splendor Patris/Tibi Christe	3	25	To St Michael, hymn 'Tibi Christe splendor Patris' in T
Dies dignus decorari/Demon dolens dum domatur/Iste confessor	3	26	To St Germanus, hymn 'Iste confessor' (Vespers for Nativity of a Confessor) in T
Gaude felix Anna/Gaude mater matris Christi/Anna parens	3	27	To St Anne, verse of respond 'Matronarum hec matrona' from rhymed Office 'Felix Anna' in T
Gaude virgo salutata/Gaude virgo singularis/Virgo mater comprobans/Ave gemma	4	28	Seq to the BVM
Preco prehemencie/Precursor premititur/[textless]/Inter natos mulierum	4	29	Ant 'Inter natos' from Nativity of St John the Baptist in T
Salve scena sanctitatis/Salve salus servulorum/Cantant celi agmina/[textless]	4	30	To St Catherine, T [com repetenda of respond 'Virgo flagellatur
Specialis virgo/Specialis virgo/Salve parens	3	31	T from seq 'Post partum Virgo Maria' (Assumption of the BVM)
Veni Sancte Spiritus et emitte/Veni Sancte Spiritus et infunde/Veni Creator Spiritus/Mentes tuorum	4	32	Hymn 'Veni Creator' for Whitsunday
Veni Sancte Spiritus et emitte/Consolator optime/Sancti Spiritus assit [textless]		33	Hymn 'Veni Creator' and sequence 'Sancti Spiritus assit' for Whitsunday
[textless]		34	Bukofzer supplies editorially the text of the Marian ant 'Nesciens mater'
[textless]		66	Only T survives (in treatise)
Nesciens mater		67	Fragment of T only (rhythmicized plainsong) quoted by Morley in <i>Plains and East Introduction</i> (London, 1597), p.178, probably from 150 rhythmic motet
SECULAR AND VERNACULAR			
Durer ne puis I pray you all		64	Rondeau; also attrib Bedyngham Carol; anon., but attrib. 'J D' in earliest source, ed in MB, iv (1952), no 15 (= 65)

Title	Voices	MB	Remarks
Je languis en piteux martyre O rosa bella (P. L. Giustiniani)	3 3-6		Ballade. Dunstable's name erased and replaced by Dufay's (<i>I-TRmn</i> 92). Modified ballata, also attrib. Bedyngham, exceptionally widely copied and recomposed, 2 keyboard arrs. in the Buxheim Organbook (MB, nos. 54a-b).
Puisque m'amour			Rondeau, 1 keyboard arr. (Buxheim Organbook) and 4 different 2-part versions (in <i>G-B-Lhm</i> Titus A XXVI) survive (MB, nos. 55a-b).

MARGARET BENT

Duny, Egide. See DUNI, EGIDIO.

Duo. A term frequently applied, in preference to DUET (of which it is the exact French equivalent), to instrumental compositions for two performers. It is sometimes applied to vocal duets in the Renaissance and early Baroque periods (see BICINIUM). The instrumental form flourished particularly during the 18th century. The term 'duo' is sometimes coupled with an adjective, for example in Weber's *Grand duo concertant* op.48 for clarinet and piano, it is also sometimes used to refer to the performers who play music for two instruments.

Duodecima (It.). TWELFTH.

Duodezime (Ger.). TWELFTH.

Duodrama. MELODRAMA in which two principal characters are involved, speaking in alternation with (or accompanied by) the orchestra; examples were composed by Georg Benda (*Ariadne auf Naxos*, 1775).

Duparc, Elisabeth ['Francesina'] (d. ?1778). French soprano. She was trained in Italy, and engaged by the Opera of the Nobility for London in autumn 1736. She sang privately before the royal family at Kensington Palace on 15 November, and also 'performed several Dances to the entire Satisfaction of the Court'. She made her King's Theatre début on 23 November in Hasse's *Siroe*, and sang that season in Broschi's *Metope*, Pescetti's *Demetrio*, Veracini's *La clemenza di Tito* and Duni's *Demofonte*. Heidegger re-engaged her for the following (1737-8) season, when she appeared in the pasticcio *Arsace*, Pescetti's *La conquista del vello d'oro*, the Handel pasticcio *Alessandro Severo* and Veracini's *Partenio*, as well as Handel's new operas *Faramondo* (Clotilde) on 3 January 1738 and *Scerse* (Rosilda) on 15 April. From then she was known almost exclusively as a Handel singer. She was his leading soprano at the King's Theatre in the early months of 1739, at Lincoln's Inn Fields in 1739-40 and 1740-41,

at Covent Garden in early 1744 and 1746, and again at the King's Theatre in the long but unsuccessful winter season of 1744-5. He paid her £400 on 11 May 1745. She was in the first performances of *Saul* (Michal), *Israel in Egypt* and probably *Jupiter in Argos* between January and May 1739, the *Ode for St Cecilia's Day* and *L'Allegro* (the *Penseroso* arias) in 1739-40, *Imeneo* (Rosmene) and *Deidamia* (title role) in 1740-41, *Semele* (title role) and *Joseph and his Brethren* (Asenath) in 1744, *Hercules* (Iole) and *Belshazzar* (Nitocris) in 1745, and the *Occasional Oratorio* in

Elisabeth Duparc: mezzotint (1737) by John Faber after George Knapton

1746. She sang Galatea in the two-act English *Acis and Galatea* (December 1739), as well as in the bilingual version (February 1741), the title roles in *Esther* (March 1740) and *Deborah* (November 1744), Delilah and one of the anonymous women in *Samson* (1744 and 1745), and in *Alexander's Feast* (1739) and *Messiah* (April 1745). In oratorio she usually sang in English, but at the second performance of *Israel in Egypt* (11 April 1739) Handel added three Italian arias (and one English) for her. Though seldom heard at concerts, she had a part in a 'New Eclogue' by Veracini at the New Haymarket Theatre on 9 March 1741 and sang Handel arias at the annual Musicians Fund benefit at Covent Garden on 10 April 1745. In winter 1751-2 she reappeared in a series of concerts at the Great Room, Dean Street.

Francesina's bright soprano improved greatly under Handel's tuition, and she became a worthy successor to

Strada and even Cuzzoni. Many of her arias resemble Cuzzoni's in their demand for rapid and agile decoration, frequent trills and a melodious warbling style; the ornaments of 'Myself I shall adore' in *Semele* echo more than one of Cleopatra's arias in *Giulio Cesare*. Francesina was particularly successful in bird songs - 'Nasconde l'usignol' in *Deidamia*, 'Sweet bird' in *L'Allegro* and 'The morning lark' in *Semele* were all composed for her - but Handel's high opinion of her powers of characterization and all-round musicianship is clear from the many superb parts he gave her, especially *Semele*, *Iole* and *Nitocris*. She enjoyed a triumph as *Semele*. Mrs Delany wrote after the first night: 'Francesina is extremely improved, her notes are more distinct, and there is something in her running-divisions that is quite surprising. She was much applauded'. Burney ranked her as a singer of the second class, but also wrote of 'her lark-like execution', 'a light, airy, pleasing movement, suited to [her] active throat', and (of her part in *Faramondo*) 'that natural warble, and agility of voice, which Handel afterwards seems to have had great pleasure in displaying'. Her compass was *c'* to *b''*, but in the later parts Handel treated her top notes with caution; he transposed three of *Semele*'s arias down a tone, and when he took her up to *b''* he had the violins doubling. A portrait of Francesina by George Knapton was engraved in mezzotint by John Faber (1737; see illustration).

WINTON DEAN

Duparc [Fouques Duparc], (Marie Eugène) Henri (b Paris, 21 Jan 1848, d Mont-de-Marsan, 12 Feb 1933) French composer. At the Jesuit College of Vaugirard in Paris he had César Franck as his piano teacher, and while studying law he found time for composition lessons from Franck, writing and in some cases publishing a number of works which he later destroyed. Of five *mélodies* for voice and piano, published in 1868, he wished only *Soupir* and *Chanson triste* preserved, but *Sérénade*, *Romance de Mignon* and *Le galop* were later reclaimed and, though not forming part of the strict canon of the composer's works, provide interesting evidence of the influences of Gounod, Liszt and Wagner. A duet, *La fuite*, was later published with the composer's assent. Of his orchestral essays, a symphonic poem *Lénore* after Bürger's ballad, written in 1875, was performed on several occasions at the time, and the nocturne *Aux étoiles* is all that was eventually preserved of a *Poème nocturne* performed in 1894. An opera *Roussalka* based on Pushkin was never finished, when Duparc abandoned composition in 1885, his completed and acknowledged artistic legacy consisted simply of 13 songs composed between 1868 and 1884.

The cause of his abandoning composition was a neuro-aesthetic condition, no doubt of physical origin but predominantly psychological in its manifestations of crippling hyperaesthesia. Far from being insane, Duparc led a very quiet but otherwise normal life, at first in south-western France and later in Switzerland, devoted to his wife and family, he continued to read, to interest himself in music (but not to compose) and to execute water colours, pastels and sepia drawings until he became blind. A visit to Lourdes in 1906 with Paul Claudel and Francis Jammes was the occasion of an experience that greatly increased his already deeply religious cast of mind, and his private journal witnesses to the sincerity and intensity of his inner life. A characteristic entry dated 1916 refers to his blindness: 'Have I

not loved too well the beauty of shapes and colours, and does not God wish me to live from now on a more interior life concerned solely with Him?' He had a very French wit, often biting but never cruel, and his characteristic humour may be seen in a letter to his close friend Ernest Chausson, who was agonizing over the composition of his opera *Le Roi Arthur*:

Since you've got that fearsome old battle-axe Guinevere by the short hairs, give her a good shaking, when you've gutted her properly, you'll find it easier to settle the quarrel with her old cuckold of a husband

Duparc lived on, blind and latterly paralysed, to 1933

The extreme sensibility which was to cripple him psychologically at the age of 36 was reflected in Duparc's attitude to music from the outset. His admiration, like that of all Franck's pupils, was directed primarily to Bach, Beethoven (especially the Ninth Symphony and last quartets) and, among contemporaries, Wagner. Duparc heard Wagner performances in Munich in 1869 and, as Liszt's guest, met Wagner the same year at Weimar. In 1879 he visited Bayreuth with Chabrier, one of a number of visits both earlier and later. He even tried to persuade Wagner to abandon the realistic production of his works in favour of a simple symbolism - Brünnhilde, he believed, should be surrounded at the end of *Die Walküre* by a simple 'circle of light' rather than stage flames. In this, as in other aesthetic matters, he was in advance of his times. He was among the earliest French admirers of Tolstoy's *War and Peace*, of Ibsen's plays, of French primitive paintings and of oriental art, not only Japanese prints but Japanese theatre and Cambodian dancing, both of which he saw at the Paris exhibition of 1900. He was a great Dante enthusiast, an early champion of Baudelaire and Verlaine, and deeply attached to Mistral's poetry.

The foundation of Duparc's artistic sensibility was not far removed from that of his malady. The criterion suggested by his 'je veux être ému' is the same as that of Lekeu's 'pour moi l'art est infiniment sentimental' and the emotional temperature of the Franck circle first attracted and then further stimulated these precariously balanced addicts of feeling. Duparc's songs are preserved from the mawkishness that sometimes mars Franck's own music, and more often that of his weaker disciples, by the innate taste shown in his choice of poems (confirmed by his enthusiasm for the austere virtues of primitive painting and Japanese theatre), and by the solidity and painstaking finish of his craftsmanship, the result, in many cases, of countless revisions. Even when the form of a song, or its accompaniment suggests the *romance de salon*, Duparc transcends the genre. The rippling chordal figuration of *Chanson triste*, for instance, clothes an ambitious and beautifully designed harmonic structure (e.g. the excursion from the tonic E \flat major, through G \flat (F \sharp), A major, D major minor back to E \flat). In *L'invitation au voyage* the gently insistent oscillation over an open 5th is contrasted with the complete stillness of the refrain, reintroduced in the last (major) verse against an echo from the first (minor). Many of the songs are strophic with variations, and the complexity of the vocal line depends on the nature of the poem. It is simplest in Théophile Gautier's ballade *Au pays où se fait la guerre*, where the dramatic element is more naive and more theatrical than in *Le manoir de Rosemonde*, where the syncopated dotted rhythm and interrupted cadences give this interior drama a sinister character, enhanced by the concentrated rhythmic and harmonic tensions of the final verse (whose postlude

recalls that of Schumann's *Ich hab' im Traum geweinet*. The shifting chromaticism produced by the enharmonic modulations of *Soupir*, though sustained by a single rhythmic pattern, shows a distinct Wagnerian influence. This is even clearer in the minor 9th chords of *Élégie* and the deliberate 'Tristanisms' of *Extase*.

Only one of Duparc's songs, *La vague et la cloche*, was designed for the orchestra, and it is not as strictly unified as the songs composed with piano accompaniment. The composer orchestrated the accompaniments of *Chanson triste*, *Au pays où se fait la guerre*, *L'invitation au voyage*, *Le manoir de Rosemonde*, *Phidylé*, *Testament* and *La vie antérieure*; but although he complained to Chausson that he 'would never learn to write well for the piano', the piano versions are in each case preferable. Their chief fault lies in a readiness to fill out harmonies by broken chord figuration (*Phidylé*, *Testament*), perhaps to counteract the static character of the bass lines as well as to provide that fictitious amplitude that was the bane of Franck's pupils in general. A fondness for harmonic progressions based on consecutive 5ths (as in *Lamento*) did not exclude carefully worked contrapuntal detail in the inner voices of the accompaniments. In his handling of French prosody Duparc was no more scrupulous than other French composers of the day, as his setting of *Chanson triste* shows, but his feeling for poetic atmosphere and his ability to communicate it in music was unequalled among his contemporaries. He was unique in giving the French *mélodie* a musical substance, an emotional intensity and a unity of poem and music that were not to be equalled until the songs of Fauré's maturity.

WORKS

(orchestration by composer: all printed works published in Paris)

Editions. *Cinq mélodies*, op. 2 (Paris, 1869) [C]

MARTIN COOPER

Duphly [Dufly, Du Phly etc], **Jacques** (b. Rouen, 12 Jan 1715, d. Paris, 15 July 1789). French harpsichordist and composer. He was the son of Jacques-Agathe Duphly and Marie-Louise Boivin of the parish of St Eloi, whose registers supply the little that is known of his early life. On 11 September 1734 'le sieur Dufliq, organist of the cathedral of Evreux' applied for a position at St Eloi; the register goes on to make clear that he had been trained by Dagincour at Rouen, went to Evreux (c. 1732) for what must have been his first appointment (he was only 19 when he resigned from it) and returned to his native parish. His tenure at St Eloi began inauspiciously with his being shut out of the organ loft by his aged predecessor; but the church quickly changed the locks. To St Eloi he added Notre Dame de la Ronde in 1740, his sister Marie-Anne-Agathe filling in when duties conflicted. He left both appointments in 1742 and moved to Paris; according to the clerk of St Eloi, it was *affaires* that drew him there,

but other reports suggest that it was the realization that he would do better as a specialist of the harpsichord in Paris than as an organist in Rouen. Pierre-Louis Daquin, son of the organist, said of 'Duflitz' in 1752:

For some time he was organist at Rouen, but doubtless finding that he had a greater gift for the harpsichord, he abandoned his first instrument. One may suppose that he did well, since he passes in Paris for a very good harpsichordist. He has much lightness of touch and a certain softness which, sustained by ornaments, marvellously render the character of his pieces.

Marpurg (1754) remarked that 'Duphly, a pupil of Dagincour, plays the harpsichord only, in order, as he says, not to spoil his hand with the organ. He lives in Paris, where he instructs the leading families'.

His reputation seems to have reached its peak in the 1750s and 1760s. Marpurg's *Raccolta delle più nuove composizioni di clavicembalo*, ii (1757) contains a pair of rondeaux from Duphly's first book. In 1764 Walsh brought out an edition of his second book; in 1765 the 20-year-old Richard Fitzwilliam was studying with him. That year Pascal Taskin, the harpsichord maker, reckoned 'Duffy' among the best teachers in Paris, along with Armand-Louis Couperin, Balbastre and Legrand. The article on fingering in Rousseau's *Dictionnaire* (1768) contains rules which the author presents 'with confidence, because I have them from M Dupli, excellent harpsichord teacher who possesses above all perfection in fingering' (though either Duphly or Rousseau overlooked the fact that these 'rules' were lifted word for word from Rameau's, in his *Pièces de clavessin* of 1724). The titles and dedications of Duphly's pieces show him to have been a part of the inner circle of professional and aristocratic connoisseurs; yet he seems to have been unambitious and content with a simple life. Daquin wrote that 'in general his pieces are sweet and amiable: they take after their father'. Although this represents a curious judgment of his music, which is more often flashy and energetic, it may reflect a nature that allowed him to drift gently from view to a point of obscurity where it became necessary to inquire in the *Journal général de la France* (27 November 1788) 'what has become of M Duphly, former harpsichord teacher in Paris, where he was in 1767. If he no longer exists, one would like to know his heirs, to whom there is something to communicate'. When he died, the next year, no heirs appeared; even his sister could not be located. But his will and the inventory of his effects show that he had been living in modest comfort in a small apartment overlooking the garden in the Hôtel de Juigné. His dedication of his last pieces to the Marchioness of Juigné, 21 years before, did not exempt him from paying 300 livres a year for rent. Evidently Duphly never married: his chief legatee was his manservant of 30 years. There was not even a harpsichord.

Dagincour may have been Duphly's teacher, but Rameau's harpsichord music served as Duphly's chief model. Rameau's shadow falls on themes (the courante *La Boucon* in book 1 begins like Rameau's E minor courante, transformed in metre) and on whole pieces (*Les colombes* in book 2 - which Daquin must have meant when he said of Duphly's music: 'On connaît les tourterelles, qui affectent le cœur' - is almost a condensed paraphrase of *La timide* from Rameau's *Pièces de clavecin en concert*, 1741). Scarlatti's fast 3/8 sonatas have their echo in *La De Caze* (book 2) and *La De la Tour* (book 3), and Dagincour (or Couperin, whom Dagincour imitated) can be felt in a rondeau in C (book 1) and *La De Brissac* (book 2), among other pieces.

Book 3 mixes solos and two sonata-like groups with violin accompaniment; the latter are singularly unimaginative in their use of the violin, which seems to have been more a hindrance than a resource. Two solo groups in F minor and D are excellent, however. The first consists of a sombre rondeau in bass-viol range called *La Forqueray* after the late virtuoso of that instrument, a brilliant chaconne of 285 bars, and a savage tirade entitled *La Médée* and marked 'vivement et fort'. In the 12 years between books 3 and 4 fashion passed Duphly by: book 4 contains but six half-hearted essays in Alberti-bass style.

WORKS

Edition: *J. Duphly Pièces pour clavecin, Le pupitre*, i, ed. F. Petit (Paris, 1967)

(printed works published in Paris unless otherwise stated)

Kbd *Pièces de clavecin* (1744), Second livre de pièces de clavecin (1748), as A Collection of Lessons for the Harpsichord (London, n.d.), *Troisième livre de pièces de clavecin* (1758), 3 pieces ed. J. Volant-Panel (Paris, 1961), *Quatrième livre de pièces de clavecin* (1768), from which La de Drummond, arr. Iv, hpd as Rondeau gracieux, in *Collection lyrique* (1774)

Pedagogical figured bass method, 1765, attrib. Duphly by R. Fitzwilliam, *GB-Cfm*

Some anon. kbd pieces in F-C D.8170 (incl. *L'orageuse*, ed. in J.-P. Rameau *Oeuvres complètes*, ed. C. Saint-Saëns and others, i, Paris, 1895) may be by Duphly

DAVID FULLER

Dupla (Lat.: 'duple'). In early music theory, the ratio 2:1. In harmonic theory this represented the octave, which could be produced by two notes on the monochord whose respective lengths of vibrating string were in the ratio 2:1. In the system of PROPORTIONS of the late Middle Ages and Renaissance, the *proportio dupla* indicated a diminution in the relative value of each note shape in the ratio 2:1. In modern practice, duple time has two beats to the bar.

Duplessis [Plessis]. French family of composers and musicians. Several musicians of this name were active in France from the last years of the 17th century and throughout the 18th. In some cases their relationship with each other, if any, is obscure, and we know little of their lives.

(1) **Jean-Baptiste Duplessis** (fl. 1685-95). Harpsichordist. In 1687 he signed a contract with the director of the Opéra in Lyons to become a répétiteur and 'director of music from the harpsichord'. In 1692 he was evidently still in Lyons, where on 4 May he stood godfather to an unidentified child. He described himself as 'bourgeois de Paris'.

(2) **Joseph Duplessis** (fl. 1690-1700). Composer. This name appears in a manuscript of 1697, at the head of a Sarabande and Air for two instruments (*D-SW*)

(3) **Duplessis** [l'ainé] (fl. 1704-48). Violinist and composer. He was in the orchestra of the Paris Opéra

between 1704 and 1748. Two volumes of violin sonatas by him appeared between 1702 and 1710, as well as airs and chansons published by Ballard.

(4) **Duplessis** [*le cadet*] (fl 1734–53). Violinist and composer, brother of (3) Duplessis *l'ainé*. He was a violinist in the Paris Opéra orchestra, which he entered at a salary of 450 livres. In 1749 his name appears in the capacity of music teacher at a school in Paris called Magasin de l'Opéra, and it seems that by that date he had already been employed there for several years. On 22 July 1734 the Paris Opéra staged *Les fêtes nouvelles*, an *opéra-ballet* in five acts with music by Duplessis *le cadet*. The prima ballerina was the celebrated Camargo, and in the cast was Pierre Jélyotte. From 1734 onwards the *Mercur de France* mentions all the main works of Duplessis the younger, which include motets, symphonies and even a novel. From 1753 his name disappears and it seems probable that he died around this time.

(5) **Lenoir Duplessis** (b Paris, 1754). Composer. He appears to have been known as 'Chevalier Lenoir Duplessis'. In 1779 a one-act opera, *L'Amour enchaîné par Diane*, with music by Lenoir Duplessis, was staged in the small student theatre of the Paris Opéra, followed in 1780 by his *Don Carlos ou La belle invisible*, a potpourri of music from Italian operas, a kind then fashionable among French composers.

NICHOLAS ANDERSON

Du Plessis, Hubert (Lawrence) (b Malmesbury district, Cape Province, 7 June 1922). South African composer. He studied at Stellenbosch University (1940–43), privately with W. H. Bell (1942–3), and with Friedrich Hartmann in Grahamstown (1944–5), where he was later a lecturer at Rhodes University College (1946–51). In 1951 he went to London on a scholarship to the RAM and studied composition with Alan Bush and Howard Ferguson. From 1955 to 1957 he taught at both the South African College of Music (University of Cape Town) and at the music department of the University of Stellenbosch, where he was appointed senior lecturer in 1963. Du Plessis is one of the most active South African musicians, who in addition to lecturing and composing is a well-known pianist, harpsichordist and writer. Although a successful composer of instrumental works, he feels himself to be essentially a vocal composer. He at first rejected the use of South African elements in his music, but from 1958 he used Afrikaans and Cape Malay folk songs on account of their symbolic significance (e.g. *Slamse beelde* and *Nag en daeraad*). Although he has made use of 12-note elements, his music does not sever connection with traditional tonality.

WORKS

(selective list)

CHORAL AND ORCHESTRAL

- Sym, op. 14, 1954; *Slamse beelde*, op. 21, solo vv, chorus, orch, 1959; *Die dans van die reën*, op. 22, solo vv, chorus, orch, 1960; *Music after 3 Pictures* by Henri Rousseau, op. 24 (Un soir de carnaval, Pour fêter le bébé, Le rêve), orch, 1962; *Suid-Afrika' nag en daeraad*, op. 30, solo vv, chorus, orch, 1966; *Requiem aeternam*, op. 39, chorus, 1975

CHAMBER

- Inst. Sonata, op. 10, pf 4 hands, 1953; Str Qt, op. 13, 1953; 7 Preludes, op. 18, pf, 1956; Pf Trio, op. 20, 1960; *Inspiré par mes chats*, suite, op. 27, pf, 1964; 4 Pieces, op. 28, pf, 1965; *When I was a Child*, suite, op. 33, pf, 1971; Sonata no. 2, op. 40, pf, 1975; Sonata, op. 43, va, 1977

- Songs (for lv, pf) In den ronde (H. Marsman), op. 5, 1948; *Vreemde liefde* (I. D. du Plessis), 1951; 5 Invocations (Webster, Fletcher), op. 12, 1953; 3 Sonnets from the Portuguese (E. B. Browning), op. 15, 1954, rev. 1973; *Die vrou*, op. 30, 1966; 10 Boerneck-toonsettings, op. 38, 1975

JAN BOUWS

Duplet. A group of two notes or chords occupying the time of three. It usually occurs in a movement in compound time (i.e. where the main beat is divisible by three), and is the exact opposite of the triplet occurring in simple time (i.e. where the main beat is divisible by two). Duplets are usually written as in ex. 1a, but since

Ex 1
(a)

(b)

each note in such a group occupies exactly half as much time again as in the normal grouping of three, thus having the value of a dotted note, duplets may equally well be notated as in ex. 1b (as occurred increasingly from the late 19th century).

ERIC BLOM/R

Duple time. In modern practice, two beats to the bar; see DUPLA.

Duplex longa. See LARGE.

Duplum, duplex (Lat.: 'double', 'twofold'). Terms used in medieval theory to denote principally (1) two-voiced polyphony. In 13th-century theoretical writing both terms were used as nouns in this sense, or as adjectives in phrases such as 'organum duplum' and 'conductus duplex'. See ORGANUM and CONDUCTUS. In earlier theory the term *diaphonia* was used (e.g. in *Musica enchiriadis*, c850), but in the Montpellier organum treatise (c1100) *diaphonia* was defined as 'duplex cantus'.

(2) Compound, of an interval: hence 'duplex diapason'. *Musica enchiriadis* employed 'duplex organum' to refer to the doubling at the octave of an organal voice in parallel organum, as distinct from 'simplex organum'; likewise, 'duplex cantus' for the doubling of the principal voice. Consequently, 'duplex' has the force of 'composite' as distinct from 'simple' organum.

(3) The second voice of a polyphonic composition – the voice composed as a duet against a tenor. In theory of the 9th to 12th centuries the phrase 'vox organalis'

was generally used (though 'dupla vox' appears in *Musica enchiridis*), and elsewhere simply 'organa ad...' and 'organa super...' (both appearing in the Winchester troper, *GB-Ccc*), 'organica cantica' etc. The term 'duplum' arose in 13th-century theory (e.g. Anonymous IV), in descriptions of florid ORGANUM, of DISCANT and CLAUSULA. But when the second voice of a clausula was set to a poetic text, thus transforming the composition into a motet, it was subsequently called *motellus* or MOTETUS.

(4) Lengthening of duration, as in 'longa duplex', 'duplex pausatio' (see NOTATION, §III, 3); also diminution or augmentation by a factor of two ('dupla', 'proportio dupla') in mensural notation of the 14th century to the 16th. See PROPORTIONS

IAN D. BENT

Duponchel, Jacques [Giacomo] (b Douai; d Osimo, nr. Ancona, 1685). Flemish composer and organist resident in Italy. It is not known when he went to Italy, nor when he became a Franciscan friar: the titles of his prints describe him as 'Duaceno in Flandria Minorum Conventualium S. Francisci'. From the same sources it is apparent that he was *maestro di cappella* of Ss Apostoli, Rome, by 1665 but had become organist to Cardinal Bicchi at Osimo by 1671. From about 1676 until 1683 he was organist of Osimo Cathedral. Apart from including his four-part *Domine, probasti* in his collection of *Salmi vespertini* (Rome, 1683), G. B. Caifabri dedicated to him with lavish praise the posthumous reprint in 1677 of some solo motets by Bonifazio Graziani.

WORKS

Psalmi vespertini una cum litanis BMV, 3vv, org, op 1 (Rome, 1665); *Sacrae cantiones una cum litanis* BMV, 2-4vv, org, op 2 (Bologna, 1671)

Messe concertate, 3-5vv, vns, str ad lib, op 3 (Rome, 1676)

1 piece, 4vv, 1683¹

JOHN HARPER

Dupont, G. (fl c1440). Composer. His only surviving work, a Marian motet *Salve mater misericordie*, is found in *I-TRmn* 92. Only the top voice is texted and the other two voices are instrumental in nature.

TOM R. WARD

Dupont, Gabriel Edouard Xavier (b Caen, 1 March 1878; d Vesinet, nr. Paris, 2 Aug 1914). French composer. He studied with his father, an organist, before becoming a pupil of Gedalge, Massenet and Widor at the Paris Conservatoire. He achieved his first success with *La cabrera*, an opera that won the competition established by the Milanese publisher Sonzogno. Dupont suffered from a lung disease that eventually took his life; both *La maison dans les dunes* and *Les heures dolentes*, collections of piano pieces, reflect his obsession with death. A performance at the Colonne Concerts of four orchestrated pieces from the latter set was hissed for supposedly daring instrumentation. Prunières called his *Antar* 'the best modern opera produced in France since *Samson et Dalila*'.

WORKS

La cabrera, opera, 2, perf. Milan, 1904; *La glu* (opera, 4, J. Richépin and H. Cain), 1905-8, perf. Nice, 1910; *La farce du cuvier* (opera, 2, M. Lema), perf. Brussels, 1912; *Antar* (opera, 4, Chekri Ganem), 1912-13, perf. Paris, 1921

Piano works, songs, orchestral works, chamber music, choruses

Principal publisher. Heugel

ELAINE BRODY

Dupont, Guillaume-Pierre [Pierre-Guillaume] (b Paris, 22 June 1718; d Paris, after 1778). French violinist, son of PIERRE DUPONT, not to be confused with Guillaume Dupont, one of the 24 Violons du Roi in the 1720s and 1730s. Dupont studied with Jean-Marie Leclair *l'aîné*, and in 1738 a report in *Mercur de France* listed him among young violin pupils 'who promise much and who cause astonishment to many people'. He made his début at the Concert Spirituel in Paris in September and November 1739, playing three concertos by Leclair; between 1739 and 1755 he appeared as soloist at those concerts on 13 occasions. About 1745 Dupont joined the orchestras of the Académie Royale de Musique and the Concert Spirituel, in both of which he played until pensioned in 1773. De Jeze's *Etat de Paris* of 1759 listed Dupont as 'maître de violon'. For Leclair's memorial service, proposed for December 1765 but never realized, Dupont orchestrated his master's *Tombeau* (op 5 no. 6). In 1772 Dupont published in Paris *Airs variés pour un violon seul* (a second volume appeared in 1778), and some of the compositions published without given name under the surname 'Dupont', and attributed to JEAN-BAPTISTE DUPONT, may also be by Guillaume-Pierre Marpurg, who heard Dupont in the late 1740s, called him 'ein annehmlicher Violinist'.

NEAL ZASLAW

Dupont, Henri-Denis (b Liège, 1660; d Liège, 1 or 14 September 1727). South Netherlands composer and organist. He was a chorister at St Lambert Cathedral, Liège, a pupil there of L.-J. Pietkin and Pierre Lamalle and an organ pupil of Guillaume de Lexhy. On de Lexhy's retirement in 1680 he was passed over in favour of Gotture, but on the latter's death in 1685 he obtained the organist's post. It was probably in 1713 that he obtained the succession to Lamalle as *phonaseus*, in which capacity he directed the studies of the young choristers, including Jean-Noël Hamal. A cultured man, he possessed a superb library and in his will forbade its dispersal; but the musical works, not covered by this arrangement, were bought by the chapter of St Lambert for a derisory sum, and have now disappeared. In the 19th century these manuscripts were still known: Terry

mentioned ten large anthems with continuo, four-part responses with continuo, and a *Te Deum pro turcarum destructione*, performed in the cathedral on 26 December 1717 to celebrate Prince Eugène de Savoie-Carignan's victory over the Turks at Belgrade. According to one of Henri Hamal's manuscript accounts of Liège musicians, Dupont encouraged the adoption of Italian music in Liège.

According to Vannes, a Denis Dupont was mentioned as organist in Antwerp in 1688 and 1690.

PHILIPPE MERCIER

Dupont, Jacques. See PONT, JACQUES DU.

Dupont, Jean-Baptiste (fl Dunkirk, 1773-83) French violinist and composer. His biography is confused with that of GUILLAUME-PIERRE DUPONT (most 18th-century documents mention only 'Dupont' without given names). From 1773 there are records of Dupont as leader of the town orchestra, violin teacher and 'marchand de musique' at Dunkirk. He is assigned the authorship of the compositions listed below on the basis of a listing in the Breitkopf thematic catalogue and the list 'Auteurs ou compositeurs de musique' (*Almanach musical*, Paris, 1777-9), which shows under 'Dupont' only 'premier violon du Concert de Dunkerque, à Dunkerque', and no other Duponts. Jean-Baptiste may have moved to Paris at the time of the Revolution, for a 'Dupont' was listed in the orchestras of the Théâtre de l'Ambigu Comique and Théâtre François-Lyrique in 1792, and the Théâtre d'Emulation in 1799.

WORKS

- Recueils d'ariettes avec accompagnement en quatuor (Paris, 1775), lost, cited in Breitkopf catalogue
 2 concertos arrangés sur des ariettes des opéra Lucile [Gretry] et du Deserleur [Monsigny], vn, str, bc (Paris, 1776), ?lost, cited in Breitkopf catalogue

NEAL ZASLAW

Dupont, Nicolas (b ?Liège or at or nr. Namur, c1575; d Madrid, 25 Sept 1623). South Netherlands composer and singer. He was one of 14 boy sopranos aged between seven and 12, including Géry de Ghersem, Mathieu Rosmarin (Mateo Romero), Philippe Dubois, Jean Dufon and Jean de Loncin, who were recruited in the Netherlands in 1585 to serve in the chapel of Philip II of Spain. He arrived in Madrid at the beginning of 1586 and was a pupil of Philippe Rogier until he was promoted to the rank of *cantor* on 1 December 1593. On the death of Philip II he continued in the service of Philip III and subsequently of Philip IV until his death.

From 1616 onwards he combined his duties as royal *cantor* and composer with those of *maestro de capilla* at the Monasterio de la Encarnación, Madrid. On 26 February 1602 he was invested by Archduke Albrecht and Archduchess Isabella with a prebend at Andenne (which he resigned in favour of his brother in 1616) and on 2 June 1614 with a benefice at the chapel of St Jean-Baptiste at the castle at Namur. According to Gaspar de Arratia, a copyist at the royal chapel at Madrid at the beginning of the 17th century, he was highly regarded as a composer in Spain and could have been the musical director of any chapel there. Diego de Pontac was among his pupils. There is a five-part villancico by Dupont at E-Zyp, and the catalogue of the library of King John IV of Portugal, destroyed in the Lisbon earthquake of 1755, records 20 other works by him, both sacred and secular, for three to eight voices; five had Latin texts, four Spanish and 11 French.

PAUL BECQUART

Dupont, Pierre (d Paris, 1740) French violin teacher and dancing-master. He published *Principes de musique par demandes et réponse* (Paris, 1713, 4/1740), which is valuable for its systematic exposition of the French performing practice called *notes inégales* (unequal notes). He also published *Principes de violon par demandes et par réponse, par le quel toutes personnes, pourant apprendre d'eux-mêmes a jouer du dit instrument* (Paris, 1718, 2/1740), valuable for its explanations of the strict bowing patterns used in French dance music. Both treatises, although they reflected the conservative practice of the Lullian school, remained in print throughout the 18th century. At Dupont's death legal documents referred to him as 'marchand de musique'.

NEAL ZASLAW

Dupont. French family of cellists and composers.

(1) **Dupont** [first name unknown]. Cellist and harpsichordist. He was employed at the court of Louis XV, and collaborated with a certain Dugué in the composition of the opera *Jupiter et Europe*, performed at court in February 1749. His name is mentioned on several occasions as early as 1738 in the memoirs of the Duke of Luynes. He served as *huissier de la chambre du roi*, and in 1748, according to Luynes, was rewarded for his services with a snuffbox bearing the portrait of the king. Luynes also referred to him as a 'grand musicien' who played 'fort bien'. He was perhaps the father of (2) Jean-Pierre Dupont and (3) Jean-Louis Dupont; the lineage of the Dupont family remains unknown (see Moore).

(2) **Jean-Pierre Dupont l'aîné** (b Paris, 27 Nov 1741; d Berlin, 31 Dec 1818). Cellist and composer. He made

his début at the Concert Spirituel in February 1761; his subsequent performances earned the praise of an anonymous reviewer in the *Mercur de France* (April 1762, ii, 189):

In his hands the instrument is no longer recognizable, it speaks, expresses and renders everything with a charm greater than that thought to be exclusive to the violin. The vigour of his execution is always accentuated by the most exact precision in the performance of difficulties of which one can have no idea without a knowledge of the instrument. It appears to be unanimously agreed that this young man is the most singular phenomenon to have appeared in our salons.

During the next two years Duprat performed frequently at the Concert Spirituel and was always favourably received. He studied with the cellist Berteau during his early years. From 1766 he appeared at the Concert Spirituel less often, while employed until 1769 by the Prince of Conti. He then went to England and two years later to Spain. In 1773 he accepted an invitation from Frederick the Great of Prussia to become first cellist of the royal chapel in Berlin. There he taught the prince, Friedrich Wilhelm II, and supervised concerts at court from 1787 to 1806, after which he remained an important figure in the musical life at court. When Mozart visited Potsdam in 1789 he wrote a set of piano variations (K573) on a minuet by Duprat. Some years later Beethoven performed with Duprat at court, and he may have written his cello sonatas op 5 (1796), dedicated to Friedrich Wilhelm II, particularly for Duprat. Duprat's own compositions, written mainly for his performances at court, include a cello concerto, four sets of sonatas and other works for the cello, most of them characterized by virtuoso solo parts.

WORKS

Orch. Vc Conc. A (Paris, ?n d.), ?lost, Conc. D, vn, vc, unpubd, ?D-Bds, vn part by P. Vachon.

Vc sonatas: 6 for vn/vc, b (Paris, ?1767), 6 for vc, b, ?op 2 (Paris, c 1770), 6 for vc, b, op 3 (Paris, c 1788), 6 for vc, bc, op 1 (Berlin and Amsterdam, 1787), also as op 4 (Paris, c 1800), 12 for vc, b, ?Bds, 1 for vc, b, ?Bds.

Other: 3 duos, 2 vc, ?op 1 (Paris, ?1782), 3 Airs with Variations, vc (London, n d.), Menuet, used by Mozart in pl variations K573, 2 airs varies, vn, vc (Paris, n d.), collab. G. M. Giornovich, also attrib. J.-L. Duprat, other works.

(3) Jean-Louis Duprat *le jeune* (b Paris, 4 Oct 1749, d Paris, 7 Sept 1819). Cellist and composer, brother of (2) Jean-Pierre Duprat. He began to study the cello as a pupil of his brother, and soon became his equal in ability. At the age of 18, he played a sonata at the Concert Spirituel (2 February 1768), with his brother accompanying; the performance was described as 'precise, brilliant, astonishing; the full, mellow, pleasing sounds and a sure, bold execution reveal the greatest talent... [that of a] virtuoso, at an age usually fixed for study. He was heard with admiration even by connoisseurs' (*Mercur de France*, March 1768). His manner of playing was often compared with that of the violinist Viotti and, according to La Borde, Duprat was able to achieve 'effects that were previously unknown' by applying Viotti's 'manière large et brillante' to the cello. He later performed at court with Viotti for Marie-Antoinette. Duprat appeared frequently at the Concert Spirituel and at other Parisian concerts until the outbreak of the French Revolution. He then went to Prussia, where he served as a court cellist with his brother. While living in Prussia he wrote a treatise on playing the cello. The most thorough treatment of cello technique up to Duprat's day, the treatise has not lost its significance and remains the foundation of modern cello playing. In it he described basic elements, such as clefs,

fingering and the holding and tuning of the instrument, as well as other points of technique. In a section on the production of harmonics he included a short piece by the violinist Barthélemon to be played entirely in harmonics. He included many exercises in double stops, which he recommended as the surest way to form an excellent technique, and discussed the importance of creating sympathetic vibration for full tone production. He described the effect of a portamento (*porter le son*), or sliding from one note to another on one string with the same finger, as 'defective, in that it produces a bad effect', to be used only rarely. At the end he included 21 studies: 19 of his own and one each by his brother and Berteau.

Duprat returned to Paris in 1806, where his performances again met with acclaim. Financial circumstances compelled him to take a post in the service of the dethroned Spanish king, Charles IV, at Marseilles in about 1808-12, after which he again returned to Paris and played in the imperial chapel (later the royal chapel under Louis XVIII). He taught the cello at the Paris Conservatoire from 1813 to 1 January 1816.

Duprat's compositions comprise concertos and sonatas for the cello, as well as light 'genre' pieces, many of his works were written in a virtuoso style, designed for his own performances. His 1711 Stradivari cello was purchased by Auguste Franchomme in 1843 for 22,000 francs and in 1974 was acquired by Mstislav Rostropovich.

WORKS

Vc concs.: 6 pubd (Paris, ?1785-1815), 1 also as op 1 (Berlin and Amsterdam, 1792).

Sonatas: 3 sets of 6, vc, opp 1-3 (Paris and Amsterdam, n d.), lost, 6 for vc, op 4 (Paris, ?1800), also pubd Amsterdam, 6 for vn (Paris, 1772), mentioned by Brook.

Duos: 3 for 2 vc (Paris, 1782), also pubd London, 8 airs varies, 2 vc (Paris, n d.), also pubd London, also attrib. J.-P. Duprat, 2 airs varies, vn, vc (Paris, n d.), collab. G. M. Giornovich, also attrib. J.-P. Duprat.

Other chamber (selective list): Fantaisie, vc/vn, pl (Paris, n d.), collab. C. Martainville, Romance, vc, pl (Berlin, c 1812), also pubd Paris. Duo concertant, vc, pf (Paris, ?1825), 3 nocturnes, pf, vc/vn (Paris, n d.), collab. N. C. Bochsa, R. Kreutzer, 3 nocturnes, pl, cl/vn (Paris, n d.), collab. Bochsa, Kreutzer.

Pedagogical: Essai sur le doigté du violoncelle et sur la conduite de l'archet (Paris, c 1813), 21 exercices faisant suite à l'essai sur le doigté (Paris, c 1813).

MARY CYR

Duprat, Régis (b Rio de Janeiro, 11 July 1930). Brazilian musicologist and violinist. He studied the violin and viola with Johannes Oelsner (1944-54) and music theory and composition with Olivier Toni (1948-52); he then went to the University of São Paulo, where

he took the BA and licenciatura in history (1958–61). In Paris, as a fellow of the French government, he attended research seminars at the Institut de Musicologie (1962–3); having returned to Brazil he took the doctorate at the University of Brasília in 1966 with a dissertation on the music of the Church and Cathedral of São Paulo during the colonial period. Concurrently he was active as a violist, being a member of the Radio Nacional Symphony Orchestra (São Paulo, 1954–9) and the São Paulo Municipal Symphony Orchestra (1956–64). With a fellowship from the Gulbenkian Foundation (1964) he did archival research in Portugal on Brazilian music history and in the same year was appointed professor of musicology and the viola at the University of Brasília. He has contributed substantially to the history of colonial church music in Brazil, particularly in São Paulo Cathedral and the Paraíba do Sul valley. His work in Brazilian and Portuguese colonial archives revealed important primary sources of the late 18th century; he has edited works by André da Silva Gomes. In 1970 he was awarded a special prize of the Associação Paulista dos Críticos Teatrais for his outstanding contribution to Brazilian musicology.

GERARD BÉHAGUE

Duprat, Rogério (b Rio de Janeiro, 1932). Brazilian composer. He studied the cello and other subjects at the Villa-Lobos Conservatory, São Paulo, and took lessons in theory and composition with Toni and Santoro. In 1962 he attended the Darmstadt summer courses and studied electronic music at the studios of Cologne, Karlsruhe and Paris. He was a co-founder in São Paulo of the Estadual SO and of the São Paulo Chamber Orchestra, whose experimental chamber group he directed for a time.

In his music he abandoned an early nationalist manner in favour of 12-note writing, serialism and electronic work. Together with Mendes, Cozzella and Corrêa de Oliveira, he was associated with the Musica

Nova group of São Paulo, whose manifesto (1963) called for strict adherence to avant-garde beliefs and techniques. However, after the mid-1960s he worked mainly as a composer and arranger of urban popular music, notably with the Tropicália group.

GERARD BÉHAGUE

Dupré [Du Pré]. Several French lutenists and composers of lute music of the 17th century bore this name; it is not known if or how they were related. The following deserve mention.

(1) **Laurent Dupré** (fl 1671–92). As a theorbo player he succeeded François Pncl in 1671 as 'ordinaire de la musique' to the king. In 1683 he took part at court in the first performance of Lalande's *Les fontaines de Versailles*. He was again mentioned as a theorbo player nine years later (in A. du Pradel: *Livre commode des adresses de Paris pour 1692*, MS, F-Pn). It has been claimed that he died on 25 March 1680 at 89, but this must have been a namesake. There are several pieces by him, including a *Tombeau de Dufaut*, in the first part (1682–6) of the manuscript lutebook of Etienne Vaudry de Saizenay (in F-B).

(2) **Dupré d'Angleterre**. He presumably worked in England. He is known only by certain pieces for lute expressly attributed to him in several manuscripts from the end of the 17th century, including that referred to above and René Milleran's anthology (c1690; F-Pn Rés. 823).

JOËL DUGOT

Dupré, Desmond (John) (b London, 19 Dec 1916; d nr. Tonbridge, 16 Aug 1974). English lutenist and viol player. He read chemistry at St John's College, Oxford, from 1936 to 1940, but after the war began a formal musical education at the RCM (1946–7), where he studied the cello with Ivor James and harmony with Herbert Howells. In 1947 he took up the viol, teaching himself, but his professional playing was at first confined to the cello (Boyd Neel Orchestra, 1948–9) and the guitar (many broadcasts). In 1950 he made his first recording with Alfred Deller, accompanying him on the guitar, and in 1951 they gave a Wigmore Hall concert, in which he played the lute (which, like the viol, he had taught himself). After that, he often appeared with Deller and his consort.

He also played with many other pre-Classical music ensembles, such as the Julian Bream Consort, Jacobean Ensemble and Musica Reservata, and his joint talents as lutenist and viol player were often heard to advantage in Bach's *St John Passion*, in which he played the

obligato parts in both 'Betrachte, meine Seele' and 'Es ist vollbracht'. He formed a recital partnership with Thurston Dart with whom he recorded Bach's sonatas for viola da gamba and harpsichord, and he played in the first performance of Dart's reconstruction of a Handel concerto for lute and harp. He was the first president of the Lute Society (1956-73).

DAVID SCOTT

Dupré, Elias [Dupre, Helias] (fl 1507). Composer. His music has survived almost exclusively in Petrucci's seventh and ninth frottola books; a further frottola appeared in Petrucci's second book of frottolas intabulated by Bossinensis for lute and voice (1511), which probably originated in Petrucci's tenth book, now lost. Within the fairly restricted metrical framework of the forms of the *barzelletta* and *oda*, typical choices of the frottolists of the first decade of the 16th century, Dupré's settings range from effective homophonic simplicity to a more involved and seamless style. In this style, often used by Tromboncino, the inner parts provide an active and almost continuous accompaniment to a more leisurely and syllabic cantus with a simple harmonic bass.

JOAN WESS

Du Pré, Jacqueline (b Oxford, 26 Jan 1945). English cellist. She began taking lessons at the age of five, and the next year she entered the London Violoncello School directed by Herbert Walenn. When she was ten she became a pupil of William Pleeth, with whom she remained after she entered the GSM, where she won every major award. She had additional study with Paul Tortelier and Mstislav Rostropovich, and launched a successful professional career with a concert at the Wigmore Hall, London, in March 1961, playing a cello of 1672 by Antonio Stradivari that had been presented to her anonymously. She was immediately acclaimed for her instinctive feeling for style and breadth of understanding as well as technical proficiency - qualities confirmed by subsequent concert tours and gramophone records, which include concertos by Boccherini, Delius, Dvořák, Elgar, Haydn (two), Saint-Saëns and Schumann. Those of the Elgar and Schumann concertos, in particular, reflect her generous natural talent and warmth of romantic feeling. She first toured the USA in 1965 as a soloist with the BBC SO, and in 1967 she married the pianist and conductor Daniel Barenboim, with whom she appeared in duo recitals and as a soloist. She gave the first performance of Goehr's *Romanze* for cello and orchestra, which was written for her (1968), but her style gradually became more mannered. In 1971 she had to rest for a year on medical advice; in 1973 her career was sadly interrupted by multiple sclerosis. She was awarded the OBE in 1976.

NOËL GOODWIN

Dupré, Marcel (b Rouen, 3 May 1886; d Meudon, 30 May 1971). French organist, composer and teacher. Both of his grandfathers were organists and choirmasters; his mother was a pianist and cellist and his father was organist of St Ouen, Rouen, and the conductor of a choral society. Dupré began his musical education with his father at the age of seven; at 12 he was appointed organist of St Vivien and on his 15th birthday his first choral piece was performed at his home. During these early years he sometimes went for walks with Cavaillé-Coll, talking about organ construction. In 1898 he became a pupil of Guilmant, whose improvisations at La Trinité spurred Dupré to work intensively at fugal improvisation. He studied at the Paris Conservatoire (1902-14) with Diemer (piano, *premier prix*, 1905), Guilmant and Vierne (organ, *premier prix*, 1907) and Widor (fugue, *premier prix*, 1909); in addition he was a member of Widor's composition class and won the Prix de Rome (1914). Found unfit for military service in World War I he undertook to learn all of Bach's organ works, and in 1920 he gave a complete performance at the Conservatoire. This was the first time that such a performance had been given and it sufficed to establish his reputation. In December 1920 he made his first appearance outside France, playing in London to a filled Albert Hall. In 1921 he gave a series of recitals in the Wanamaker Auditorium, Philadelphia, and in New York where, for the first time, he improvised a symphony, later to become the *Symphonie-Passion*. From that time he visited the USA regularly.

Dupré continued to be widely active as a recital organist: he made a world tour in 1939 and in 1953 celebrated his 1900th concert, though later he gave up recitals. To the last, however, he retained his position at St Sulpice, where he had succeeded Widor in 1934. He loved its organ and it was there that he made his most sublime improvisations, ricercars in six parts, double fugues, chorale preludes and toccatas. Several of these have survived in Dupré's own transcriptions; *Le chemin de la croix* was improvised at Brussels in 1931 and written down in the same year. From 1926 to 1954 he was also professor of organ at the Conservatoire, where he strictly maintained the tradition of Widor, Guilmant and Lemmens. Dupré's very individual compositional style has a tonal basis, with a more or less polytonal or chromatic superstructure. In addition to using the classic liturgical and secular forms, he wrote symphonic pieces, among them symphonic poems of a religious character. Some of the characteristics of his organ writing - such as the employment of staccato and of chords in rapid bunches - were further developed by his pupils Alain and Messiaen.

XAVIER DARASSE

Duprez, Gilbert(-Louis) (b Paris, 6 Dec 1806; d Paris, 23 Sept 1896) French tenor and composer. He first studied with a violinist, Carpentier, then sang as a treble in Fétis's incidental music to Racine's *Athalie* at the Comédie-Française. Having further studied with Choron and briefly visited Italy, he made his tenor début at the Odéon (*Il barbiere di Siviglia*, 1825); but meeting with mixed success, including for his own opera *La cabane du pêcheur* (1826), he went to Italy to continue his studies soon after the theatre's 1828 closure. He quickly won popularity in various Italian cities as a *tenore di grazia*, clinching his success with his creation of Edgardo in *Lucia di Lammermoor* (Naples, 1835), and at the same time gradually darkening his tone with his development of the *voix sombrée* under the influence of Domenico Donzelli.

Returning to France, Duprez was engaged at the Opéra, making his début there in *Guillaume Tell* (1837); he also sang leading roles, often for their first performances in Paris, in Halévy's *Guido e Ginevra* (1838), *La reine de Chypre* (1841) and *Charles VI* (1838), Berlioz's *Benvenuto Cellini* (1838), Auber's *Le lac des fées* (1839), Donizetti's *Les martyrs* (1838), *La favorite* (1838) and *Dom Sébastien* (1843) and Verdi's *Jerusalem (I lombardi)* (1847), also establishing himself as Nourrit's successor in Meyerbeer's *Robert le diable*, *Les Huguenots*, Halévy's *La juive* and Auber's *La muette de Portici*. He also sang in London in 1844-5 (*Lucia*), and toured Germany in 1850. He taught at the Paris Conservatoire from 1842 to 1850, and in 1853 founded his *Ecole Spéciale de Chant*.

According to his fellow student Scudo, Duprez was already outstanding during his training for the breadth and incisiveness of his phrasing, though his voice then seems to have been small and limited in colour. It was with his performance of *Guillaume Tell* that he revealed himself as a striking *tenore di forza*, and clearly he greatly developed his powers during his Italian years, acquiring then his particular characteristics. He is said to have been the first tenor to sing the top C as a chest note (in *Guillaume Tell*, to the dismay of Rossini, who compared it to 'the squawk of a capon having its throat cut'). In France, where he was acclaimed as the first true Romantic tenor, he became enormously popular, being greatly admired for his excellent declamation and the smoothness of his *canto spianato*; he was, however, said to be exaggerated in his acting style. Presumably through forcing his voice, a decline set in early, and according to Roger he became violent in his delivery. Berlioz greatly admired him in the vigorous music of *Benvenuto Cellini* in 1838, though noting that his voice had already 'coarsened to the point where smoothly produced tone and quiet or reflective music no longer came naturally to him' (*Mémoires*), and questioning (even to his face) his stylistic judgement. Duprez in turn found Cellini 'strange to my italianized ears' (*Souvenirs d'un chanteur*), and abandoned the role with some indignity. Berlioz seems later to have forgiven him, but nevertheless wrote in 1841 that 'he has no longer any voice, neither high nor low. There is no longer a Duprez!' (letter to his sister Adèle Suat, 14 March 1841). The story of the famous tenor's rise and fall in *Les soirées de l'orchestre* (sixth evening: 'Étude astronomique') is largely based on Duprez's career.

Duprez's operas are *Le cabane du pêcheur* (1826), *L'abîme de la maladetta* (1851; revised as *Joanita*, 1852), *La lettre au bon Dieu* (1853), *Jélyotte* (1854), *Samson* (1857), *Jeanne d'Arc* (1865) and some others (unproduced). He also wrote *L'art du chant* (1845), *Souvenirs d'un chanteur* (1880), which gives a valuable account of his times and of some distinguished contemporaries, notably Berlioz and Donizetti, *Récréations de mon grand âge* (1888) and other works.

His wife Alexandrine (née Duperron) (b Nantes; d Brussels, 27 Feb 1872) was a soprano who made her début at the Odéon in 1827 and often appeared with her husband; but she lacked substantial gifts and retired early. Their daughter Caroline (b Florence, 10 April 1832; d Pau, 17 April 1875) was a *soprano leggero* who also sang with her father, appearing in Paris and other French cities, in London (1851), then creating a number of roles at the Opéra-Comique. She married the Opéra répétiteur Vandenheuevel, and after a successful career was forced by illness to retire early.

JOHN WARRACK

Dupuis, Albert (b Verviers, 1 March 1877; d Brussels, 19 Sept 1967). Belgian composer. While he was a

student at the Verviers Conservatory his work began to attract notice: a comic opera was performed at the town theatre when he was 18. In 1897 he settled in Paris, following the courses of d'Indy, Guilmant and Bordes at the Schola Cantorum; he won the Belgian Prix de Rome in 1903 with the cantata *La chanson d'Halewyn*. After a brief career as a conductor he was director of the Verviers Conservatory (1907–47). In his compositions he remained faithful to the teaching of the Schola Cantorum, using Franckian cyclic form in instrumental works. His 13 operatic pieces show the influence of Massenet, and it was to the theatre that his work was best suited. The principal publishers of his music were Buyst, Cranz, Eschig, Leduc, Schott (Brussels) and Senart; his MSS are in the Verviers Conservatory.

HENRI VANHULST

Dupuis, Sylvain (b Liège, 9 Oct 1856; d Bruges, 28 Sept 1931). Belgian conductor and composer. He studied at the Liège Conservatory (1865–76) and won the Belgian Prix de Rome in 1881 with the cantata *Le chant de la création*. The prize journey took him to Bayreuth and to Paris where he formed a friendship with d'Indy. Back in Liège he was appointed professor of harmony at the conservatory, from 1886 he conducted the choral society La Légia and in 1888 he founded 'Les nouveaux concerts'. He conducted at the Théâtre Royal de la Monnaie (1900–11) and also directed the Brussels 'Concerts populaires'. Dupuis was responsible for introducing music from Wagner to Debussy into Belgium. He was elected to the Belgian Royal Academy in 1911 and was director of the Liège Conservatory (1911–26). His few compositions – published by Bosworth (Brussels) and Schott (Brussels) – show a remarkable feeling for drama in a moderately advanced harmonic style.

HENRI VANHULST

Dupuis, Thomas Sanders [Saunders] (b London, 5 Nov 1733; d London, 17 July 1796). English organist and composer. He was a chorister in the Chapel Royal, where he studied with Bernard Gates and John Travers. He was elected a member of the Royal Society of Musicians on 3 December 1758. Subscriptions were invited for his concertos op.1 on 11 October 1760; a collection of minuets had appeared earlier. Dupuis married Martha Skelton of Fulham on 16 July 1765. As an organist Dupuis served from 1773 or earlier at the Charlotte Street Chapel, London, and in 1779, on Boyce's death, he was appointed organist and composer of the Chapel Royal. He was one of the directors of the Handel Commemoration in 1784. On 26 June 1790 he took the degrees of BMus and DMus at Oxford; his degree piece was called *Ode to the Genius of Britain*. Subsequently Dupuis instigated the formation of the Graduates Meeting, a group of musicians with degrees in London.

Dupuis' teaching activity is reflected in the didactic intent of most of his keyboard publications. The sonatas op.2 were among the earliest to offer the option of performance on the piano. Although few of his compositions seem above the mediocre, he was highly regarded

in his time as an organist. In his *Notebooks* Haydn referred to him as 'a great organist'; Haydn was ecstatic in his praise after hearing Dupuis improvise fugues at St James's. In Burney's opinion (*Rees's Cyclopaedia*, 1819–20) 'he was a correct harmonist in his compositions and a good performer on the organ, with a fancy not very rich or original; but his finger was lively and he knew his instrument well'. In the obituary notice in the *Gentleman's Magazine* (lxvi, 62) he was praised as 'distinguished for good sense, knowledge of mankind, integrity and benevolence'. A substantial collection of Dupuis' church music was edited and published posthumously as *Cathedral Music* by his student and friend, J. Spencer.

A son, the Rev. T. Skelton Dupuis (1766–95), provided texts for some of his father's and others' works, including the *Ode on the Late Providential Escape of His Majesty* (1786). His libretto *Elijah* was set by Callcott in 1785.

RONALD R. KIDD

Dupuits, Jean-Baptiste (fl 1741–57). French composer and teacher of the harpsichord and vielle (hurdy-gurdy). nothing is known of him beyond what can be gleaned from his works and an announcement in the *Mercur*. His works, however, are substantial in both quantity and quality, and merit something better than the total obscurity into which they have fallen, even though many

are written for so unsatisfactory an instrument as the vielle.

In 1757 he was styled 'M J. B. Dupuits des Bricettes, Directeur & Professeur de l'Ecole publique de Musique', where 'lessons in the various styles are given every day except Sundays and holidays, and three times a week *concerts* for learning ensemble and keeping in time'. At some time, probably in the 1740s, he was employed by the Duc de Cambray and lived in the rue de Seine; in 1757 his address was rue du Bout du Monde. He was either very friendly with the engraver Jean Robert or was willing to spend considerable sums on the appearance of his publications, for nearly all have handsome pictorial title-pages by that artist. The collection of songs *Les mille et une baguettes* is decorated with 30 designs. The last record of him is a request for subscribers to a proposed guitar method in 1757.

His two *grands motets* are the work of a highly skilled craftsman. *Quam dilecta* is 62 pages long, with ten movements, all differing in scoring or technique. His music for vielle pushes the instrument to the limit of its resources in the attempt to supply it with a respectable literature. The sonatas for harpsichord with vielle accompaniment include a *fuga da capella* and a *canone*, while the handsomely engraved *Pièces de caractères* are an attempt to adapt the titled and delicately detailed *pièce de clavecin* to the rustic instrument. The Italian sonatas for flutes or violins hover on the threshold of the style *galant*, most movements proceeding in long-breathed Baroque sweeps, occasionally broken by shorter phrases and modern melodic details. The method for vielle is lucid and very detailed in its explanation of the technique of the instrument and contains valuable comments on the performance of each movement of the six sonatas included with it.

DAVID FULLER

Du Puy, Henry. See PUTEANUS, ERYCIUS.

Dupuy, Jean Baptiste Edouard (b Corcelles, Neuchâtel, c1770; d Stockholm, 3 April 1822). Swiss violinist, singer and composer. He studied the violin in

Paris with Francesco Chabran and the piano with Dusik about 1783. In 1785 he was leader at the private theatre of Prince Henry of Prussia at Rheinsberg. A scandal led to his dismissal a few years later and he became a touring violinist; by 1793 he was in Stockholm, where he joined the court orchestra and was active as a singer and composer. He became a member of the Swedish Academy of Music in 1795. He was expelled from Sweden for political reasons in 1799 and went to Copenhagen, where he furthered his reputation as a composer and a singer (he was the first to sing the title part in Mozart's *Don Giovanni* there in 1807). His stay in Denmark came to an end when Princess Charlotte Frederika of Mecklenburg (consort of Prince Christian Frederik, afterwards Christian VIII), whose singing teacher he was, fell in love with him. Both were exiled in 1809, and Dupuy then went to Paris; but in 1811 a change in the Swedish political situation enabled him to return to Stockholm, where as court conductor he produced his own works, Mozart operas and operas by most of the contemporary French composers.

WORKS

Selective list, see detailed list in *MGG*, MSS in *DK-Kk*, S-L, *Skma*, *Sm*, *Vn*, *St*

THEATRICAL WORKS

(all first produced at Stockholm, opera, unless otherwise indicated)

- Arlequin magicien par amour (comic ballet-pantomime, 2, J. Marcadet), Stockholm, Arsenal, 18 Dec 1793
- Stratrovaren eller Den adelmodiga soldaten [The highwayman, or The noble soldier] (ballet-pantomime, 1, L. Deland), Stockholm, Arsenal, 18 Dec 1794
- Ballet music for an epilogue to R. Kreutzer's *Lodoiska*, 2 Nov 1795
- De adelmodiga bonderna [The noble peasant] (scene inserted in Derède's *Les trois fermiers*, C. J. Lindegren), Stockholm, Arsenal, 10 Feb 1797
- Ungdom og galskap eller 1st over list [Youth and folly, or 1 trick for trick] (Singspiel, 2, N. T. Brunn, after J. N. Bouilly *Une folie*), Copenhagen, Royal Theatre, 19 May 1806, as *Ungdom och dårskap* eller *List not list* (trans. C. G. Nordfors), Stockholm, Opera, 31 Oct 1814, ed. R. Nenedam (Copenhagen, 1923)
- Foreningen [Union] (divertissement, 1, G. Lowenhielm, Nordfors), 2 Jan 1815, for the union of Sweden and Norway
- Jenny Mortimer eller Roverbandet i skotska bergen [Jenny Mortimer, or The bandits in the Scottish highlands] (incidental music, 3), 5 June 1817
- Björn Jernsida (opera, Valerius), unfinished
- Skatan och tjenstpigan i Palaiseau [The magpie and the maid of Palaiseau] (divertissement dance, J. L. Abergsson, after Caignez, Daubigne *La pie voleuse*), 21 April 1818
- Hamlet (incidental music, Shakespeare), Stockholm, Arsenal, 26 March 1819
- Sömngångerskan (incidental music, 2, L. Hjortsberg, after Scribe, Delavigne *La somnambule*), 6 Oct 1820
- Felcie eller Den romanska flickan [Felcie, or The maid of Rome] (comic opera, 3, Hjortsberg, after E. Mercier-Dupaty), 19 Dec 1821
- 12 other works, 1797-1820

OTHER WORKS

- Coronation music for Charles XIV, 2 S, T, B, 4vv, orch, Stockholm, 11 May 1818
- 4 other works for state occasions, 1813-17
- Orchestral and chamber music, piano pieces, songs

BRUCE CARR

Duquesnoy [Lancin], Charles (François Honoré) (b Beuzet, 18 May 1759, d Brussels, 9 May 1822). South

Netherlands tenor and composer. He showed special gifts as a choirboy; from 1781 to 1786 he was at the Paris Opéra and in 1787 joined the Théâtre Royal de la Monnaie in Brussels, where he sang tenor parts with success. He developed a gift for composition, mainly of church music, though he also wrote for the stage. In 1794, following the French invasion, and having changed his name to Duquesnoy at his parents' request, he fled to The Hague; he lived there until 1795, when the French crossed the Dutch border. He then established himself in Hamburg and, with the help of some musicians from the Monnaie theatre, founded an opera house for French immigrants. *La fête des mariages, ou Le tirage de la milice* was produced there on 1 June 1798.

In 1802, after the promulgation of the Concordat, Duquesnoy became a choirmaster, first at Aalst and then, in 1814, at the church of St Michel and Ste Gudule in Brussels; there he exercised an important influence on Roman Catholic church music in the Netherlands, an influence which continued after his death and after the establishment of the independent kingdom of Belgium in 1830.

WORKS

- Almanzor, ou Le triomphe de la gloire, 2-act opéra-ballet, 1787
 Le mari vengé, ou Le mystificateur mystifié, 3-act opéra comique, 1790

AUGUST CORBET/JOHN LADE

Dur (Ger., from Lat. *durus*: 'hard'). Major, as in *G dur* (G major), *Durklang* (major triad) etc. The term is contrasted with *moll* (from Lat.: 'soft'), which is German for 'minor'. The names *dur* and *moll* fundamentally derive from the two forms of the letter 'b' in musical notation: *b durum*, or 'square b', was used to denote the pitch *b₄*, and it is this form of the letter that developed into the modern natural sign (*♮*) and sharp sign (*♯*); *b molle*, or 'round b', was used for the pitch *b₃*, and this form of the letter developed into the modern flat sign (*b*). The use of these terms is also reflected in the names of the hexachords (see **HEXACHORD**) in which they appear; the *hexachordum durum* (or *cantus durus*) always included the pitch class *B₄*, the *hexachordum molle* (or *cantus mollis*) *B₃*. The present meaning of *dur* and *moll* seems to have occurred first in Andreas Werckmeister's *Die nothwendigsten Anmerckungen und Regeln, wie der Bassus continuus ... könne tractirt werden* (1698).

See also **MAJOR**.

Durán, Domingo Marcos (*b* Garrovillas, Cáceres, c1460; *d* Santiago de Compostela, before 5 Sept

1529). Spanish theorist. He studied liberal arts and philosophy in Salamanca. In 1525 he was a singer in Santiago de Compostela and from 1526 *maestro de capilla* there. Between 1492 and about 1504 he published two treatises on music. The first, *Lux bella*, is very brief and is written in Spanish and Latin. The style and content of these treatises are more practical than theoretical, and in their manner of presentation they are very like the work of medieval theorists. Durán believed that music had primarily a religious function, and deplored its profane usage. He put his own interpretation on its traditional triple division, the enharmonic genus and the evaluation of the major and minor semitone, discussing in some detail both solmization and the practices of hexachord mutation and accidentals. He classified Gregorian modes into 'regulares', 'mixtos', 'irregulares', 'comixtos' and 'respectivos', with the priority given to the 7th degree, he also discussed the expressive effects attributed to the different modes. In his discussion of composition technique he formulated precise rules of counterpoint and admitted greater harmonic freedom in the syncopes. His *Sumula de canto de órgano* is a valuable source of information on mensural practice; he discussed in great detail the proportional system and the various mensuration signs prevailing before his own time. But he recognized the changes taking place and was clearly forward-looking in his ideas, accepting that a binary relationship between notes had become the norm, and relating the new theories based on this to earlier practice.

Durán, José (*d* ?Barcelona, after 1791). Spanish composer. He studied under Durante in Naples, and possibly became a *maestro di cappella* there — in the libretto of his opera *Temistocles* he is described as 'maestro de capilla napolitano'. In 1755 he was *maestro de capilla* in the Palau in Barcelona, a post from which he retired on 17 November 1780 (he was not, as is usually claimed, *maestro de capilla* in Barcelona Cathedral: in 1790 he was still referred to as 'retired maestro of the royal chapel of the Palau'). Durán played an important role in the introduction of the Italian style to Barcelona: in 1760 he gave the first performance there of his opera *Antígona*, followed in 1762 by *Temistocles*, both to librettos by Metastasio. He also composed church music (masses, psalms; in *E-Bc*, *C* and Barcelona Palau). The librettos of his operas and of his oratorio *Arca de Dios* survive (*Bc*), as does an overture (*Mn*) and a four-part madrigal, with Durán's reply to a criticism levelled against him by Jaime Casellas in 1755 (both *I-Bc*).

JOSÉ LÓPEZ-CALO

Durand. French firm of music publishers. It was founded as Durand Schoenewerk & Cie on 30 December 1869 and that same day bought the catalogue of GUSTAVE-ALEXANDRE FLAXLAND as well as his premises at 4 place de la Madeleine, Paris. Schoenewerk withdrew from the business on 19 November 1891, and his co-founder Marie Auguste Durand (b Paris, 18 July 1830; d Paris, 31 May 1909) reorganized the firm the next day as A. Durand & Fils, in partnership with his son Jacques Massacrie Durand (b Paris, 22 Feb 1865; d Bel-Ebat, nr. Fontainebleau, 22 Aug 1928). Jacques Durand succeeded his father, and taking as partner his cousin Gaston Choissnel (d 9 June 1921), renamed the firm Durand & Cie on 23 December 1909. Another cousin, René Dommange, joined the firm in July 1920 and became a partner on 28 April 1921. At Jacques Durand's death, his widow (d 1958) became a partner, subsequent partners have been Maquaire (1937-44), Adrien Raveau (from 1944), Mme René Dommange and Marcel and Jean Dommange (from 1959). The company became a 'société à responsabilité limitée' from 19 June 1947. Guy Kaufmann (b Neuchâtel, 12 May 1923) was appointed general director in 1972. The firm has continued to operate from its original premises.

Founder Auguste Durand, who was a classmate of Franck and Saint-Saëns at the Paris Conservatoire, studied the organ under Benoît and was organist at St Ambroise, Ste Geneviève, St Roch and St Vincent de Paul. He was also a music critic and a successful composer. His compositions include sacred and secular vocal music and many works for the piano and organ; he also had a particular liking for the harmonium, for which he composed, arranged and published extensively.

Jacques Durand also studied at the Conservatoire, where he developed lasting friendships with Dukas and Debussy. He studied harmony with Dubois and composition with Guiraud. Besides being a prolific composer, he edited and transcribed quantities of works by others. His writings include *Eléments d'harmonie* (1919), *Cours professionnel à l'usage des employés de commerce de la musique* (i: *Edition musicale, historique et technique*, ii: *Abrégé de l'histoire de la musique*, both 1923); *Quelques souvenirs d'un éditeur de musique* (1924-5); and *Lettres de Claude Debussy à son éditeur* (1927).

The catalogue that A. Durand and Schoenewerk bought from Flaxland was begun in 1847 and by 1869 contained about 1200 publications. These included many pieces by pre-19th-century composers of various nationalities, which became the nucleus of Durand's multi-volume collections of *Echos* (*Echos d'Allemagne, de France, d'Italie, de Pologne, du temps passé, du monde religieux*). Also from Flaxland came the piano works and the four-hand piano reductions of symphonies by Haydn, Mozart and Beethoven; songs and chamber works by Schumann; most of Chopin's piano music; early works by Saint-Saëns (*Oratorio de Noël*) and Duparc (op. 1); and the French and Belgian rights to Wagner's *Rienzi*, *Der fliegende Holländer*, *Tannhäuser* and *Lohengrin*.

In 1894 Durand began to publish the collected works of Rameau, with Saint-Saëns as general editor. This monumental undertaking comprised 18 volumes by

Cover of the first edition (piano score) of Debussy's 'La mer', published by Durand & Cie in 1905

1924 but has not been completed.

Spurred by the success of other national collections of classics and by their own strong sense of nationalism, Durand & Cie began in 1914 the enormous collection known as *Edition classique Durand & Fils*. Although it formally began after Auguste's death the title is apt, for the catalogue includes all of the acquisitions from Flaxland, the Rameau works, and most of the important works published by both Auguste and Jacques Durand. Intended by its founders, Jacques Durand and Gaston Choissnel, to incorporate only French contributions, the *Edition classique* has become an international catalogue. In 1969, the centenary of the firm, it comprehended 672 volumes and 811 separate compositions. Principal editors, many of whose own compositions are included, were Saint-Saëns (piano works of Mozart), Fauré (piano works of Schumann), d'Indy, Debussy (complete works of Chopin), Dukas, Ravel (piano works of Mendelssohn), Schmitt, Ropartz, Roussel, Aubert, Diémer (*Les clavecinistes français*), Philipp (*Les clavecinistes allemands* and *L'école moderne du piano*), Guilmant (*Archives des maîtres de l'orgue*), Samazeuilh and Rhené-Baton.

Much music now considered appropriate for *Edition classique* first achieved recognition largely through the efforts of Auguste and Jacques Durand to promote the music of their French contemporaries. The Durands were the original publishers of almost all the music of Saint-Saëns, Debussy and Ravel, and through purchase obtained their complete works. Most of the compositions of Fauré and Dukas and a large number by Franck, Lalo, Roussel, Schmitt, Aubert, Falla, Rhené-Baton, Widor, Ropartz, Büsser, Milhaud, Poulenc, Boulanger and d'Indy (including his famous *Cours de*

composition musicale) first appeared in Durand's catalogue. The firm has also published works by Messiaen, Cras, Auric, Bondeville, Ibert, Jolivet, Durufle, Barraud, Sancan, Pascal, Desenclos and Koechlin. Support of French contemporary music is also shown by the series of Concerts Durand for new chamber music, produced by Jacques Durand from 1910 to 1913, and the biennial cash prize for the best French symphonic composition which the firm instituted in 1927.

ROBERT S. NICHOLS

Duranowski, August (Fryderyk) (b Warsaw, c1770; d Strasbourg, 1834). Polish violinist and composer. He was the son of the Polish-French émigré Durand who, according to Chybiński, was the leader of the orchestra at the court of Duke Ogiński in Słonim, though according to Fétis he was in the service of the King of Poland. He studied the violin with his father and in Paris with Viotti, becoming leader of the Brussels opera orchestra in 1790. In 1794-5 he toured Italy and Germany as a virtuoso, but for unknown reasons he interrupted his career about 1796 to enter the French army. He was imprisoned in Milan, but once released he returned to his former activities as a soloist. In 1809-10 he gave concerts in Warsaw, where he lived for some time, during the next four years he also played in Leipzig, Dresden, Kassel, Frankfurt am Main, Mainz, Darmstadt, Prague and possibly Russia. After a brief tenure as leader of the court orchestras in Kassel and at Aschaffenburg (1812), he settled permanently in Strasbourg as leader of the theatre orchestra, occasionally absenting himself for short periods to perform in Germany and France.

Duranowski was one of the most eminent violinists of his time. His unprecedented success as a virtuoso may be attributed to his large tone and extraordinary technique, especially in trilling, bowing and passage-work. He played with precision and fire, and was particularly fond of the works of Rode and Viotti and his own fantasias on the melodies of national songs. His technique fascinated the young Paganini, who declared that it was Duranowski who had shown him the possibilities in violin playing and to whose revelatory talent he owed his own. His works, almost exclusively for the violin, were performed by other violinists during his lifetime (especially by Serwaczyński in Poland) and published in Leipzig, Offenbach and Paris. Most important among them are the Concerto in A major op.8, *airs variés* for violin and orchestra, several violin duets, a set of six studies op.15, fantasias and potpourris. Duranowski also composed a number of lieder.

BARBARA CHMARA-ŻACZKIEWICZ

Durante, Francesco (b Frattamaggiore, Aversa, 31 March 1684; d Naples, 30 Sept 1755). Italian composer. He was a leading composer of church music and an outstanding teacher of international reputation.

1. LIFE. He was the seventh of 11 children of Gaetano Durante and Orsola Capasso. His father, a woolcomber,

served as sexton and singer at the parish church, Ss Sosio, Frattamaggiore, where he and his wife had married on 31 October 1674 and where all their children were baptized. His uncle, Don Angelo Durante (c1650-after 1704), was a priest and musician who in 1690 succeeded Cristoforo Caresana as *primo maestro* of the Neapolitan conservatory S Onofrio a Capuana, of which he was rector until 1699; Don Angelo composed several *drammi sacri* (*Gara amorosa tra Cileo, la Terra e 'l Mare*, Monteforte, 1697; *S. Giuliano martire in Sora*, Naples, 1700, *L'Anacoreta reale S. Onofrio di Persia*, Naples, 1705), as well as church music, of which a *Dies irae* attributed to him is extant (two voices and continuo, D-BNu). Nothing is known of Francesco's education until after his father's death on 18 March 1699, when his uncle took over his musical training. Don Angelo left Naples to assist his widowed sister-in-law and her children, and Nicola Sabini assumed his duties at the conservatory; but in 1702 he returned to his post at S Onofrio and Francesco enrolled as a *convittore* to study with his uncle and the violinist Gaetano Francone. Three years later Francesco left the conservatory, and on 13 June 1705 his first known creative effort, a *scherzo drammatico* entitled *Prodigio della divina misericordia verso i devoti del glorioso S. Antonio di Padova*, was performed in Naples.

Little is known about Durante's life between then and 1728, when he was appointed *primo maestro* of the Neapolitan conservatory Poveri di Gesù Cristo. Choron and Fayolle (1810) stated that he studied with Pasquini and Pitoni in Rome for five years, and although that was later disavowed (by Villarosa and Florimo) circumstantial evidence seems to support them. Girolamo Chiti, in a letter to Padre Martini of 10 September 1746, identified Durante as a 'scolaro di Pitoni'; Chiti himself had been a pupil of Pitoni about 1713, so his statement has some authority. Durante could have been in Rome either between 1705 and 1710, which would have allowed studies with Pasquini (who died in 1710), or between 1711 and 1719. The only dated composition by Durante from that period, his *Missa S. Ildefonso per S. Giacomo degli Spagnuoli* of 1709, could have been written for the Spanish church in Rome or Naples. By July 1710 he was in Naples, where he began teaching at the conservatory S Onofrio. He remained there for only six months, leaving the institution on 12 January 1711, perhaps to return to Rome or to study there with Pitoni for the first time. A register of the masters and professors of the Congregation and Accademia of S Cecilia in Rome, compiled in 1851, lists Durante as a *maestro* there for 1718, but offers no documentation. Several aspects of Durante's music have been interpreted as pointing to Roman influences: his concentration on sacred music to the exclusion of opera, his preoccupation with the problems of a *stile alla Palestrina*, and his interest in keyboard music and the concerto. He was, however, in Naples on 4 January 1714, when he was married to Orsola de Laurentis, 12 years his senior, and is certain to have been present in the city at the first performance of his sacred drama *La cerva assetata ovvero L'anima nelle fiamme* on 18 February 1719. Nothing is known of Durante's whereabouts during the following nine years; it has been suggested that he visited Saxony and Austria (some older sources persistently report such tours, though during periods when he now is known to have been in Naples), but there is no supporting documentary evidence.

Durante, Francesco

In October 1728 the governors of the conservatory Poveri di Gesù Cristo appointed Durante, now aged 44, *primo maestro* replacing the elderly Gaetano Greco: his election attests to his high reputation. About the same time he must have been invited to write music for the choruses of Duke Annibale Marchese's tragedy *Flavio Valente*, published in the duke's *Tragedie cristiane* (Naples, 1729). With this contribution he joined the ranks of the then celebrated older and younger Neapolitan composers, Carapella, Mancini, Sarro, N. Pajo, Porpora, Hasse, Vinci and Leo, who had written music for other tragedies in the collection. Dated compositions of his now become more numerous. His well-known *Sonate per cembalo divisi in studi e divertimenti*, dedicated to the Marquis of S. Giorgio, were published about 1732. His Requiem in G minor is dated 27 November 1738, and his *Missa in Palestrina* was written in 1739. Also from those years come the two *Atto di Contrizione* for the alumni of the conservatory Poveri di Gesù Cristo. Among his students there were Pergolesi, who completed his education under Durante's guidance, Girolamo Abos, Domenico Terradellas and for about two years Joseph Doll.

After ten years of service, Durante resigned from the conservatory, and in September 1739 he was succeeded by Francesco Feo. The reasons for his resignation are unknown, and there is no information about his activities until 1742, when he was called to the Neapolitan conservatory S. Maria di Loreto. This oldest and largest of the four Neapolitan conservatories had been without a *primo maestro* since November 1741, when Porpora went on leave to Venice and did not return, and with the death of Giovanni Veneziano on 13 April 1742 it had lost its *secondo maestro*. On 25 April

1742 the governors elected Durante *primo maestro*, at the same time appointing Pietro Antonio Gallo to assist him as *secondo maestro*. Under Durante's directorship the Loreto conservatory regained stability and quality of education. During his 13 years' service such later masters as Pasquale Anfossi, Tommaso Traetta, Pietro Guglielmi, Alessandro Speranza, Antonio Sacchini and Fedele Fenaroli received their musical education there. When, with the death of Leonardo Leo on 31 October 1744, the *primo maestro* position at the conservatory S. Onofrio became vacant, Durante, then 60, was awarded the succession as from 1 January 1745. He also petitioned the king to appoint him Leo's successor as *primo maestro* of the royal chapel. A competition, however, was held, in which Durante took part on 21 April 1745 along with Giuseppe de Majo, Giuseppe Marchitti, Nicola Sala and others. The judges were Constanzi of Rome, Pertì of Bologna, Jommelli of Venice, and Hasse, then also in Venice. Jommelli praised Durante's a *capella* setting on the cantus firmus *Protestisti me Deus*, of which Pertì was critical; the appointment went to de Majo, vice-*maestro* of the chapel (although only Hasse had found his works satisfactory). Durante continued to hold his positions at both S. Maria di Loreto and S. Onofrio, and during the last ten years of his life was venerated as the most distinguished of all Neapolitan teachers. According to tradition Niccolò Piccinni became Durante's favourite pupil, of whom he is supposed to have said 'The others are my pupils, but Niccolò alone is my son'. Dated compositions from his last decade include the Requiem in C minor for eight voices, performed in 1746 at S. Giacomo dei Spagnuoli in Rome, an F major mass (1749), the F minor Litany (1750), *S. Antonio di Padova* (1754), a *componimento sacro* and a five-voice *Miserere* for the basilica S. Nicolò in Bari (1754).

Durante married three times. His first wife died on 27 February 1741, early biographies characterized her as a 'maledetta vecchia' who made the 27 years of their marriage a misery. On 26 January 1744 he married his second wife, Anna Furano, of Naples, who is said to have brought happiness back into his life, but she died on 10 August 1747. Only four months later, on 18 December 1747, he was married again, to the 22-year-old Angela Anna Carmina Giacobbe, formerly a domestic in his household. Reports of Durante's character and personality are primarily based on anecdotes related by Giuseppe Sigismondo, who had known the composer, and by Giovanni Furno, who related stories he had heard from his teacher Carlo Cotumacci, Durante's successor at S. Onofrio. According to these sources Durante was a man of simple manners, but profoundly wise in matters concerning his art and a respected arbiter over questions of harmony and counterpoint. He was dedicated to his pupils' welfare and education; they in turn, like Paisiello, who began his studies at S. Onofrio during the last year of Durante's life, always spoke of him with enthusiasm and admiration. He was buried in S. Lorenzo in Naples.

2. WORKS. Unlike his Neapolitan contemporaries Porpora, Feo, Leo and Vinci, who attracted international notice with their operas, Durante achieved international recognition through his church music, along with some vocal chamber and instrumental works. Although a career like his was not unusual for the older masters, or among Roman musicians of his day (like

Francesco Durante: portrait by an unknown 18th-century artist in the *Civico Museo Bibliografico Musicale*, Bologna

Bencini, Chiti or Cannicciari), it was remarkable for a Neapolitan. Almost all the composers active in Naples during the second quarter of the 18th century, including Nicola Fago and Ignazio Prota, at least attempted to compete in opera before devoting themselves to church music and teaching. Of those Neapolitan *maestri* who followed Durante's example, notably P. A. Antonio Gallo, Carlo Cotumacci and Lorenzo Fago, none equalled his reputation. In 1705, after leaving S Onofrio, Durante, like many a Neapolitan student before and after him, composed a theatrical work. The libretto to *Prodigi della divina misericordia* was by Abbenio Rolandi, and even included a comic role in Neapolitan dialect. But the music is lost, and it is not even known how it was received. It did not gain him or he did not seek – a commission for an opera. His second effort in sacred drama, *La cerva assetata* (1719), was according to Florimo dry and monotonous, too strict and old-fashioned in style to be successful. Since his choruses for *Flavio Valente* (1729) offer little insight, and his music to *Abigaile* (1736) is lost, any judgment on Durante's approach to the dramatic genre must rest on his *S Antonio di Padova* of 1754. Surprisingly for a work written only two years before his death, this *dramma sacro* does not seem old-fashioned but, like other works of his late period, shows Durante in tune with the stylistic tendencies that the younger Neapolitans had begun to pursue in their operas during the 1740s. It contains several accompanied recitatives, and its da capo arias show vigorous gestures as well as effective vocal lines. In total, however, it reveals less concern for dramatic intensity than for pleasant musical entertainment. Basically his was not an operatic talent, yet in his masses, requiems, litanies and Lamentations he could provide strong expressive moments. The absence of opera from his output was perhaps caused by both circumstances and critical self-awareness.

Any assessment of Durante's development as a composer is restricted by the fact that few of his works can with certainty be assigned to his early years. The *Missa S Ildefonso* of 1709, which requires three violins, chorus and continuo, shows its proximity to late 17th-century practices. Its Gloria excludes the words of the intonation, subdivides into sections rather than formal numbers, and contains ensembles *a 2* and *a 3*, but no solo aria. Most of Durante's surviving compositions were written after he settled at Naples in 1728: they reflect the art of the mature composer with firm control over his craft, often imaginative and forward-looking, not insensitive to the traditions of church music that he inherited, and above all responsive to the changing stylistic currents of his time – that is to say, to the situation in Naples. His work encompasses all genres and styles of liturgical and devotional music, from the large, representational orchestral 'number' masses and psalms to a *cappella* or accompanied *stile breve* settings; from the motet-cantatas, litanies and Lamentations for chorus, solo voices and orchestra to the *cantate spirituali* and Holy Week lessons for solo voices and continuo. In his choral numbers, unlike Nicola Fago or Feo, he preferred four- and five-part settings, with, in the latter, one or both sopranos serving as the solo, concertato voices. Double chorus textures occur, with few exceptions, only in works of his last decade. After Scarlatti, Durante was the first composer in Naples to set several complete mass cycles in a *cappella stile*

antico. One of these he explicitly labelled 'Missa in Palestrina' (D minor, four voices, 1739). He was well able to handle the contrapuntal techniques of the old style, and even alluded to Palestrina's *Missa 'In te Domine speravi'*; but because of his own deep-rooted feeling for harmonically guided phrasing he recreated only the Palestrina style's outer appearance and mannerisms. These masses in strict style remain isolated in his work. In later years he allowed his a *cappella* (with continuo) settings to follow freely his own expressive dictum (*Miserere*, 1754).

Leo, too, occupied himself seriously with the traditional style from the 1730s onwards, and much has been made of the difference in approach which the two masters present and which is said to have split Naples into the camps of 'Durantisti' and 'Leisti'. The difference has been explained (by Fellerer) as concerning the question whether old and new style should and could achieve a symbiosis ('Durantismo'), or whether they should remain separated, with the one treated strictly, the other in as modern a manner as possible ('Leismo'). It seems, however, that historicism overstated the problem. To set parts of the Kyrie or the 'Christe', the 'Cum sancto' or 'Sicut erat', and the 'Amen' as fugues in *stile antico* fashion was a Neapolitan tradition by the first quarter of the 18th century; both Durante and Leo adhered to it. Both also attempted in many of their works to unify older and modern practices through a *stile misto*. The true controversy was more likely based on nothing more than the academic question of whether the interval of the 4th should be regarded as consonance or dissonance and in what circumstances (Rosa, 1840). The stylistic difference between the two masters was less one of goal than one of result, caused by character and temperament. It has been stated that 'Durante is sentimental and Leo is not' (Dent). If 'sentimental' is understood in 18th-century terms, then the characterization makes a point. Leo was conservative, and had a stricter, more vigorous counterpoint. Durante was also a master of learned device, but favoured lighter, more transparent, often pseudo-contrapuntal textures. His *stile moderno* comprised startling dissonances, expressive use of dynamics, diminished chords and chromaticism (e.g. *Salve regina*, 1739; *Dixit*, 1751) as well as thematic and harmonic contrasts (motet *Tacet sonate*, *Missa*, 1753), and had a tendency towards periodic phrasing and clearcut cadential structure that could produce a truly popular tone (masses in *pastorale*, *Laudate pueri*, 1732). Many of his smaller choral works in motet style (e.g. *Vespro breve*, *Dixit a 3*) were written with ease of vocal performance in mind, while in his arias he made considerable demands on the virtuosity of singers but often attempted to integrate coloratura passages into a larger design.

Compared with other Neapolitans, Durante was not prolific. His concern was not quantity; instead he strove, within the limits of a style beset by standard vocabulary, formulae and genre traditions, towards the realization of a variety of individual concepts and exemplary solutions. In his six *Sonate per cembalo*, published by Phillipus de Grado at Naples about 1732, he explored formal as well as technical aspects of keyboard music. Each sonata combines and contrasts an extended fugal 'studio' with a short, non-fugal 'divertimento', united by key and sometimes by motivic elements. Emphasis on variety and on synthesis of diverse stylistic and formal features distinguish his eight *Concerti per quartetto*, the

most significant Neapolitan contribution to the genre. Probably written during the late 1730s or early 40s, their formal plans include wholly original successions of tempo contrasts (as in the concertos in E \flat and A, 'La pazzia'). Interplay of solo and tutti is fluent and stresses participation of the viola. His three-movement Harpsichord Concerto in B \flat with violins, cello and double bass, written about 1750, is the most notable of the few keyboard concertos by early 18th-century Italians. Here contrapuntal inclinations are held in check, and the outer movements are dominated by a playful abandon befitting the virtuoso and entertaining nature of the solo concerto.

It is one of the remarkable aspects of Durante's career that with old age he did not have to resort to repeating himself in routine fashion. His creative imagination remained fertile until death. His *Messa de' morti* for Rome (eight voices, C minor) of 1746 is among the first in a series of masterworks composed during his last decade and, aside from any theological considerations of what constitutes 'true church music', must be counted as the most important orchestral requiem of the early 18th century. Distinctive shape and character, thematic as well as structural, a preoccupation with special expressive effects and orchestration, and a concern for unifying multi-movement structures mark all his late works. The 'Quoniam' of the F major *Missa in afflictionis tempore* (1749) is an echo concerto for soprano solo, two trombe da caccia, oboes, strings (with violin passages marked 'grazioso') and continuo. Instruments partake in presenting the fugue subject independently of the chorus in the concluding 'Cum sancto', in which the home key of the Kyrie (F) rather than the Gloria (D) is re-established. In the 'Qui tollis' 'Qui sedes' movement of the great A major mass (eight voices, 1753), a four-voice 'choro da lontano' echoes sections of the soprano solo, providing a theatrical effect. In the *Missa col canto fermo* in D, the hymn *Sancte Michael defende nos* dominates the contrapuntal textures of the Kyrie and 'Christe', and reappears in the 'Cum sancto' at the end of the Gloria. In the five-part *Magnificat* in B \flat , the closing 'Sicut erat' is a near-literal repeat of the opening chorus with its psalm tone cantus firmus, such recapitulations were to become a tradition with Neapolitan composers in the second half of the century, particularly in settings of the psalm *Dirixit Dominus*. Durante's fondness for experimentation is shown in the opening orchestral Larghetto of the motet *Cessent corda*, in D (five solo voices and chorus), which begins in accompanied recitative style on a dissonant chord, then follows an unorthodox harmonic progression, reaching a cadence in the tonic only in the 11th bar, whereupon a brief allegro follows.

It was without doubt his dedication to matters of his art, and his openness to new ideas, which made Durante a sought-after and venerated *maestro*; nearly 20 years after his death Burney could observe that his 'masses and motets are still in use, and models of correct writing with the students of several conservatories of Naples'. Many of his scores reveal the teacher. It is telling that he labelled his cantus firmi (*Protestisti me Deus*, 1745) and his canons (*Messa de' morti*, 1746), and wrote 'si nota' to draw attention to a learned device hidden in the parts (*Messa col canto fermo*). His approach to the teaching of musicianship and composition can be viewed through his *Partimenti* . . . *per ben suonare il cembalo*, extant in variously titled collections, which progress from basic

cadential exercises to fugal and free-style improvisations over a variety of bass patterns. The countless solfeggios attributed to him run the gamut of vocal exercises and include duos and trios ('canoni'). Two popular 'arias by Durante', which persistently appear even in modern anthologies of Italian songs, *Danzi, danzi fanciulla* and *Vergin tutto amore*, are nothing but solfeggios to which texts and elaborate piano accompaniments were added in the 19th century. The most famous of his didactic compositions became his *XII duetti* (or *madrigali*) *da camera*, in which he transformed recitatives from solo cantatas by Alessandro Scarlatti into expressive, often highly chromatic duos, by adding a second vocal part and interludes, and considerably modifying and extending the originals. These *Duetti* may be called brilliant examples of 18th-century 'parody technique'. To Burney it seemed 'as if art and refinement in this species of composition could go no further'.

The central position that Durante held in the educational life of Naples, and the fame of his many pupils, from Pergolesi to Paisiello, prevented his name and work from being forgotten after death. Rousseau (1767) exuberantly extolled him as 'the greatest master of harmony of Italy, that is to say, of the whole world'. Although voices were raised taking exception to Rousseau's overstatement (Hasse, for example, thought Durante to be 'not only dry, but baroque, that is coarse and uncouth'), most late 18th-century critics looking backward were attracted by his style, in which the late Baroque anticipated the Classical, and contrapuntal dexterity was tempered by a natural amenity. To Grétry (*Mémoires*, 1789), therefore, he was the undisputed master of 'contrepoint sentimental'. Durante's works found wide distribution in manuscript; and during the 19th century a number of them were included in the anthologies of old masterworks published by Choron and Porro in France and Rochlitz and Commer in Germany. Performances of his music, particularly the *Missa in Palestrina* and other a *capella* works, were fostered through the Cecilian movement. The most popular and widely performed of Durante's sacred works, however, was the five-part *Magnificat* in B \flat (second version), which Kretzschmar (*Führer durch den Konzertsaal*, ii/1, 1888) praised as 'in a certain sense the ideal setting' of the Marian canticle and Hanslick (*Aus dem Tagebuche eines Musikers*, 1892) was moved to call a 'Tondichtung which in the beauty of religion celebrates the religion of beauty'. From a modern historical point of view, Durante no longer occupies the exalted position which the 18th century awarded him; but his importance as a focal point in the development of 18th-century Neapolitan church music, and the merit of his contributions to instrumental music, remain unchallenged.

WORKS

All vocal music is with instruments unless otherwise stated, only autographs, rare copies or extensive collections are noted

 HANNS-BERTOLD DIETZ

Durante, Ottavio (fl. Rome, 1608) Italian composer. He is known only by his *Arie devote, le quali contengono in se la maniera di cantar con gratia, l'imitatione delle parole, et il modo di scriver i passaggi, et altri affetti* (Rome, 1608), dedicated to the great music patron Cardinal Montalto (transcriptions in Goldschmidt and Adrio and in R. Haas: *Die Musik des Barocks*, Potsdam, 1929, 57f). The volume consists of 20 pieces and a long preface; 18 of the pieces have Latin texts, two have Italian. The majority are for solo soprano and figured bass; some are for two voices. The general style of the music is arioso with very long melismatic passages, especially at cadences. The individual pieces are

similar to the madrigals in Caccini's *Le nuove musiche* (Florence, 1602), but they are more varied in structure, and the basso continuo is more important melodically. Some pieces contain sections with different metres and contrasting melodic styles.

Durante's preface (given almost complete, and with a German translation, in Goldschmidt) is similar to Caccini's of 1602; indeed he referred to Caccini with the highest praise. But he was somewhat clearer than Caccini and is very interesting in his own right. His preface is directed to both composers and singers. Many of the details centre round the primary aim of setting and singing the words so as to make them intelligible to listeners. The preface, the pieces and even the full title of the *Arie devote* well show the expressive tenets of Italian musicians in the early 17th century.

GLORIA ROSE

Durante, Silvestro (b. ?Rome, d. ?Rome, in or after 1672) Italian composer. From December 1637 to 1662 he was *maestro di cappella* of S. Maria in Trastevere, Rome, and he later held this post again, at least in 1668 and 1672, in 1664 he was *maestro* at the Consolazione. He appears to have published no volume of music himself, but his music was frequently anthologized in collections of the mid-17th century, especially those of Florido de Silvestri. Some 30 works by him, mostly sacred and including a mass, appear in the following prints: *RISM* 1643¹, 1643², 1645², 1647², 1648¹, 1649², 1650¹, 1651¹ (the aforementioned mass), 1652¹, 1652², 1655¹, 1656², 1659¹, 1661¹, 1662², 1664¹, 1667¹, 1668¹ and 1672¹, there is also a piece in *Alias cantiones* (Rotterdam, 1657). A few pieces by him are also to be found in manuscripts (e.g. in *GB-Lbm*, *I-Bc* and *S-Uu*).

Durastanti, Margherita (fl. 1700-34). Italian soprano. Her first known appearance was in a pasticcio at Venice in 1700, when she must have been very young. The cast, which included Margherita de l'Epine, are described in the libretto as virtuosos of the court of Mantua. From January 1707, with some gaps, Durastanti was for many years in the service of Marquis (later Prince) Ruspoli at Rome, with Handel (1707-8) and later Caldara as her colleagues. From November 1707 she received a monthly salary of 20 scudi. Handel composed for her many of his finest solo cantatas, including *L'Armida abbandonata*, as well as parts in the duet cantatas *Arresta il passo* and *Amarilli vezzosa*, the big three-part cantata *Il Tebro* (*O come chiare e belli*) and the oratorio *La resurrezione* (Magdalene); she was the female singer to whom Pope Clement XI objected at the first performance (8 April 1708), and was replaced by a castrato at the second. She sang in Caldara's serenata *Chi s'arma di virtù* at the Ruspoli palace in August 1709 and was employed there for several months in 1711 and again in September 1715, when the account books mention the recapture of her lost parrot.

From 1709 to 1712 Durastanti was prima donna at

the S Giovanni Grisostomo theatre in Venice, where she sang in nine operas by Lotti and C. F. Pollaro and created the title part in Handel's *Agrippina* (26 December 1709). She sang at Parma in September 1714, and in 1715–16 in five operas at Naples, including A. Scarlatti's *Carlo rè d'Alemagna* and *La virtù trionfante*. In February 1719 Veracini engaged her for Dresden (where she was known as 'the Countess') at the considerable salary of 5225 thaler; Handel heard her there in Lotti's *Teofane* in September. In November he was authorized by the Royal Academy to offer her £500 for three months in the spring of 1720 and another £1100 for the following full season. She was duly engaged, and made her début in the first production, G. Porta's *Numitore*, on 2 April 1720. She played the title roles in Handel's *Radamisto* (27 April) and D. Scarlatti's *Narciso*. The following season she sang in Bononcini's *Astarto*, the revival of *Radamisto* (in which she played Zenobia, her old role being taken by Senesino), *Arsace* (Orlandini-Amadei), the composite *Muzio Scevola* and *Odio ed amore*. She also appeared at three concerts, in a serenata by A. Scarlatti on 28 March 1721 and (for her own benefit) a new cantata by Handel on 5 July. This was probably *Crudel tiranno amor*, the three arias in which were added to her part (Rossane) in the revival of *Floridante* on 4 December 1722. In February 1721 she bore a daughter (she was married to one Casimiro Avelloni), to whom King George I and the Princess Royal stood as godparents on

2 March. She was singing at Munich, again for a princely fee, in the autumn of 1721 and probably throughout the winter. On her return to Italy in May 1722 she was robbed of jewels worth over £500.

Durastanti returned to London for the seasons of 1722–3 and 1723–4. In addition to *Floridante* she appeared in Bononcini's *Crispo* (revival), *Erminia*, *Farnace* and *Calpurnia*, Ariosti's *Coriolano* and *Vespasiano*, Handel's *Ottone*, *Flavio* and *Giulio Cesare*, and the pasticcio *Aquilio consolo*. In each year she took a benefit in *Coriolano* which is said to have brought her upwards of £1000; on the second occasion (17 March 1724) she sang a song specially written by Pope at the instance of the Earl of Peterborough (Anastasia Robinson's husband), ending with the couplet:

But let old charmers yield to new;
Happy soil, adieu, adieu!

Durastanti returned to Handel's company for one season nine years later (1733–4) at the start of his rivalry with the Opera of the Nobility. She sang in revivals of *Ottone*, *Sosarme* (the tenor role of Haliarte shortened and modified) and *Il pastore fido* (Eurilla), the pasticcios *Semiramide riconosciuta*, *Quo Fabricio* and *Arbace* (in which she had a benefit on 128 March), and created the part of Tauride in *Arianna*. She played Calliope in *Il Parnasso in festa* in March 1734 and was probably in the revivals of *Deborah* and *Acis and Galatea* that spring. Although at the time of her 1724 benefit a contemporary described her as 'a woman already old, whose voice is both mediocre and worn out', Lady Bristol said she was singing as well as ever in November 1733. Nothing is known of her later life.

Durastanti had a longer personal association with Handel than any other singer. Besides the Ruspoli cantatas and Magdalene in *La resurrezione* he wrote for her the parts of Agrippina, Radamisto, Clelia in *Muzio Scevola*, Gismonda in *Ottone*, Vitige in *Flavio*, Sextus in *Giulio Cesare* and Tauride in *Arianna* – four of them male roles, which frequently figured in her repertory. Their exceptionally wide range of character, from tyrannical matriarchs to young boys and heroes, suggests that she was a gifted actress. Her voice was never a high soprano, and its compass gradually dropped from *d'* to *a''* in *Agrippina* to *b* to *g''* in 1733–4, when her tessitura was that of a mezzo-soprano. Rolli described her as an elephant and Burney said that her 'person was coarse and masculine', but she seems to have been a dramatic singer and a good musician, and the little that is known of her personality is sympathetic. A caricature of her by A. M. Zanetti in the Cini collection (*I-Vgc*) was apparently drawn in London in 1721, when the artist stayed at her house (see illustration).

WINTON DEAN

Margherita Durastanti: caricature by Anton Maria Zanetti (1680–1767) in the Fondazione Giorgio Cini, Venice

Durazzo, Count Giacomo (b Genoa, 27 April 1717; d Venice, 15 Oct 1794). Italian impresario and diplomat. He came from a noble Genoese family of Albanian origin that from the late 16th century produced two cardinals and eight doges (the latter including his older brother Marcello). Giacomo's early interest in the theatre was stimulated by a visit to Paris, during which he conceived his own reform dramas (e.g. *Armida*). The decisive event in his life was his 1749 appointment, suggested by Prince Kaunitz, as Genoan ambassador to

Vienna. His marriage there in 1750 to Aloisia Ernestine Ungnad von Weissenwolf raised his Viennese social position. In February 1752 he was named assistant to Count Franz Esterházy as director of Viennese theatrical affairs, the Empress Maria Theresia's doubts about the appointment having been dispelled by Kaunitz. In spring 1754, on Esterházy's resignation, he became sole *directeur des spectacles*; his *Lettre sur le mécanisme de l'opéra italien* (published anonymously, and long attributed to Josse de Villeneuve; see Verona, 1969) appeared while he was *directeur* at Vienna.

In this post Durazzo was responsible for the city's two large theatres (including their repertoires and personnel), the 'French' Burgtheater and the 'German' Kärntnerthor, each of which had its own actors, orchestra and ballet troupe; his fostering of the Kärntnerthor resulted in music's having a wider role in German plays and an improvement in the quality of ballets. After the burning of the Kärntnerthor on 3 November 1761, for which Durazzo was called to account before the empress, both troupes played alternately in the Burgtheater until the opening of the new Kärntnerthor on 9 July 1763. Among the great singers engaged by Durazzo were Caterina Gabrielli (the favourite of Kaunitz), Giacomazzi, Scotti and Guadagni. The ballet master was Gasparo Angiolini and the theatre engineer G. M. Quaglio.

Durazzo's appointment in 1760 as *cavaliere di musica* brought violent opposition from the court Kapellmeister Reutter, whom Durazzo had estranged by inviting Gluck to serve as composer and conductor of court chamber and table music, instead of limiting his responsibilities to theatre and concert music. The quarrel became so bitter that Durazzo left Vienna and his post in summer 1761, however, with Kaunitz's support he was able to return to both and to continue his patronage of Gluck.

In spring 1764 Durazzo combined a journey to Frankfurt for the coronation of Joseph II (3 April 1764) with a visit to Paris, accompanied by Gluck and Coltellini. In Frankfurt, because of the continued opposition of Reutter and various intrigues involving his financial adviser, the book censor J. T. Goutier and the actor Florent-Carton Dancourt, he was finally forced to resign. The background of the matter is not clear. Durazzo's management of the finances may have played a part, especially those arising from his association with Favart. There was probably also a connection with the departure from the theatre of the prima ballerina formerly protected by Durazzo, Louise Geoffroy-Bodin. Durazzo offered his resignation in an audience with Joseph II on 1 April 1764, and it was accepted (a few days earlier Joseph had recommended to the empress, who considered Durazzo 'a terrible busybody', that he be dismissed because he was 'dangerous' and 'already the cause of enough confusion'). Soon after, again through Kaunitz's influence, he was appointed ambassador of the Viennese court to Venice, a post he held until 1784. He travelled widely, kept in constant touch with Kaunitz and performed artistic as well as diplomatic duties, helping to form the collection of Italian prints that became the basis of the Albertina collection and sending singers to Vienna. He lived and entertained lavishly, receiving musicians such as the Mozarts in 1771 and Schuster in 1776. Little is known of his last ten years but part of the time was spent in Genoa.

Durazzo's achievements in Viennese theatre and con-

cert life were widely recognized by his contemporaries, and the opposition and scepticism he sometimes faced only serve to stress the extent of his accomplishments. A determining factor in his work was Kaunitz's policy of alliance with France, which coincided with Durazzo's own artistic aims. The 'troupe de comédiens français' brought to Vienna by Kaunitz in spring 1752 was provided by Durazzo with *opéras comiques* and vaudeville comedies imported from Paris (later with Favart's help) and arranged by Gluck. It was Gluck who helped Durazzo to achieve an independent *opéra comique*, following the Parisian model: the way led through an ever increasing number of inserted 'airs nouveaux' to *La rencontre imprévue* (7 February 1764; to a text by Dancourt), the last of eight entirely new *opéras comiques* composed by Gluck. This work remained popular for decades and was a stimulus for Mozart's *Die Entführung aus dem Serail*.

Of even greater importance was Durazzo's activity in *opera seria*. Einstein described him as the 'father of the idea of the Gluckian opera reform'. In *L'innocenza giustificata* (8 December 1755), the *festa teatrale* composed by Gluck, Durazzo combined aria texts from Metastasio with recitatives written by himself. For Traetta he had Mighlavacca revise the text of his own earlier *Armida* (3 January 1761), which aimed at combining French and Italian elements, but in Calzabigi, who came to Vienna at the beginning of 1761, and his *Orfeo ed Euridice* he recognized the ideal partner for Gluck and the model for a new Italian opera for the Viennese stage.

This renewal of *opera seria* cannot be separated from a reform of stage dance. Here Durazzo had ideal partners, first in Hilverding, then in Angiolini, and again it must have been he who brought Angiolini and Gluck together in the ballet-pantomime *Don Juan* (17 October 1761) and the ballets in *Orfeo ed Euridice*. Durazzo also involved Gluck in his Lenten concerts, which he organized for the general public in the Burgtheater every year from 1755. (He also encouraged the concerts then beginning to flourish in private houses in Vienna and organized some himself.)

The results of Durazzo's initiatives in *opera buffa* were probably already to be found in the parody of *La serva padrona* (with French text) put on by the children of the actors at the Burgtheater in December 1758 and in the production of Piccini's *Il finto pazzo* (31 December 1758). He engaged Giuseppe Scarlatti and encouraged Gassmann, whose talent for *opera buffa* he soon recognized. He did not, however, bring about the hoped-for link between Favart and Goldoni.

In his *Lettre sur le mécanisme de l'opéra italien* (Naples and Paris, 1756), Durazzo set out to 'dissipate the marvellous vapour' surrounding Calzabigi's *Dissertazione su le poesie drammatiche del sig. Abate Pietro Metastasio* (Paris, 1755). Claiming that travellers were bored as much with the opera at Naples as they were at Paris, he postulated a conciliation between French and Italian serious opera that would take advantage of the best in both traditions. He chided French critics for writing so volubly about Italian opera when they had little or no first-hand knowledge of its workings. He described equally well the real strengths and weaknesses of *opera seria*. Like Charles de Brosses (*Lettres*, 1799; written in 1740), he lamented the unruliness of audiences and the makeshift productions. But both seized upon what was most novel and expressive in the music. Whereas de Brosses marvelled

at the orchestral crescendos and extensive dynamic shadings, Durazzo praised the long and sensuous love duets (of which, he wrote, composers were so parsimonious despite their unfulfilling success), and also remarked on the obbligato recitative as another little-used resource that unfailingly moved audiences.

GERHARD CROLL, DANILL HEFARIZ

Durchbrochene Arbeit (Ger.). A term often used for the compositional technique whereby a melody is broken up into short phrases or motivic units and distributed among more than one of the voices or parts. It developed essentially during the Classical period, particularly in the instrumental works of Haydn, Mozart and Beethoven, but figured importantly in some Romantic music, particularly in Brahms's symphonic style and Wagner's treatment of leitmotif, in the 20th century its chief exponent was Webern. A medieval technique related to *durchbrochene Arbeit* is HOCKET.

Durchführung (Ger. 'leading through'). Development, in particular the DEVELOPMENT section of a work in SONATA FORM; it has also been applied to the opening section, normally called the exposition, of a FUGUE.

Durchgang (Ger.). PASSING NOTE; see also NON-HARMONIC NOTE.

Durchimitation (Ger. 'through imitation'). IMITATION at the beginnings of phrases which is applied to all the parts of a composition as they enter in the polyphonic texture, either individually or in pairs. It developed towards the end of the 15th century in motets without cantus firmi, became the norm in the sacred works of Josquin Desprez and flourished in the high Renaissance, particularly in sacred music in the 'Palestrina style'.

Durchkomponiert (Ger.). THROUGH-COMPOSED.

Durées, langue des. See *LANGUE DES DURÉES*.

Du Reneau. Pseudonym of OUVARD, RENÉ.

Duret. A term used by Michael Praetorius in *Terpsichore* (1612) as the title of a courante-like dance. The term seems to have the same connotation in the texts of some 17th-century English masques, such as Beaumont and Fletcher's *Masque at Gray's Inn* (1612), where the stage directions indicate that the knights and ladies are to dance 'galliards, durets, corantoës'.

Du Retz, Jakob. See REYS, JAKUB.

Durey, Louis (Edmond) b Paris, 27 May 1888; d. St Tropez, 3 July 1979). French composer. He resolved to devote himself to music after seeing *Pelléas* in 1907. He attended the Schola Cantorum, where he studied solfège, harmony, counterpoint and fugue with Léon Saint-Requier until 1914, he learnt orchestration from treatises and scores. His reading of a song from Schoenberg's *Das Buch der hängenden Garten* was the point of departure for his first song cycle, *L'offrande lyrique*, although there is none of Schoenberg's influence in the piano duets *Carillons* and *Neige* which followed. These pieces are much closer to Debussy and Stravinsky, influences also present in the First Quartet, whose slow movement is intensely expressive. One of Les Six, Durey soon distanced himself from the group to pursue an independent path. Satie's simplicity and Stravinsky's polytonality formed the foundation for his work, but Durey's music always has a sober gravity distinct from these composers. His best work is in the chamber music, of which the solidly made Third Quartet is a fine example, and also the vocal pieces, particularly those to texts by Perse, Apollinaire and Cocteau. *Le printemps au fond de la mer* best expresses his temperament. Secretary-general of the Fédération Musicale Populaire (1937-56) and of the Association Française des Musiciens Progressistes since 1948, part of his work was in the furtherance of his political aims, including arrangements of popular songs and original vocal works such as *La longue marche* to a text by Mao.

ARTHUR HOFFÉ

Durezza (It.: 'hardness', 'harshness'). Originally a 16th-century term used to describe the 'harsh' aural effects of dissonance (Zarlino); it later came to denote a style of keyboard writing in the early 17th century in which chromaticism, irregular resolutions and bold dissonances were explored by means of discords (*durezza*) and suspensions (*ligature*). Giovanni da Macque's *Durezza e ligature* (MS, I-Nc) are the first of their type, but numerous other composers wrote similarly striking works, including Pasquini, Trabaci, Frescobaldi, Kerll and Pachelbel.

D'Urfey [Durfey], **Thomas** (b Devon, c1653, d London, 26 Feb 1723) English poet and dramatist. His name was really spelt 'Durfey', but he preferred 'D'Urfey'. He is said to have been a clerk's apprentice in early life. His first two plays were produced in 1676, and from then, despite a pronounced stutter, he gradually became accepted at court as a singer and entertainer. He spent much of 1689 as a singing master at JOSIAS PRIEST's boarding-school in Chelsea and while there wrote the epilogue for Purcell's *Dido and Aeneas*. By then he had become a popular playwright. His talent was slender and he was at his best in farcical comedies, though in his later works he sometimes explored deeper romantic feeling. He provided texts for two semi-operas, *Cynthia and Endymion* (1697) and *The Wonders of the Sun* (1706), a burlesque pasticcio. He also used music extensively in other plays: indeed, his three *Don Quixote* plays (1694-5) are virtually semi-operas, and the first two (with music mainly by Purcell and John Eccles) took the place of an opera in the 1693-4 season. Nor were his songs confined to plays, for he was a prolific writer of odes and lyrics of all kinds, noted for his ability to fit words to pre-existing tunes; a collection of them, with tunes, *Wit and Mirth, or Pills to Purge Melancholy*, appeared in London in 1699-1700 and was much expanded in subsequent editions. He set some of his poems himself, though the melodies for only three - *How vile are the sordid intrigues*, *The Lady Devoted* and *Valiant Eugene* - are extant.

MARGARET LAURIE

Durić-Klajn [Djurić-Klajn], **Stana** (b Belgrade, 5 May 1908), Yugoslav musicologist. She studied the piano in Belgrade and music history with Miloje Milojević at

Belgrade University (1923-7), and continued with the piano under Lazare Lévy in Paris (1927-8). Between 1929 and 1941 she was active as a pianist. Between 1937 and 1945 she taught at the Stanković music school in Belgrade and in 1945 was appointed professor of the history of Yugoslav music at the Belgrade Academy, a post she occupied until 1970. In 1948 she became an associate of the musicology institute of the Serbian Academy of Arts and Sciences, and was appointed its director in 1960. She edited the periodical *Zvuk* from 1932 to 1936 and from 1955 to 1965.

Most of her studies have been devoted to the history of music in Serbia. In particular she has discussed many details of the development of Serbian music in the late 18th and the 19th centuries, when after the long Turkish occupation cultural life in Serbia greatly intensified. She has also drawn attention to various links between Yugoslav musicians and some prominent figures in European music of the 19th century. Her writings present the first survey of the history of Serbian music.

BOJAN BUJIC

Durkó, Zsolt (b Szeged, 10 April 1934). Hungarian composer. He began his composition studies at the secondary music school in Szeged, and then moved to the Bartók Secondary Music School in Budapest as a pupil of Sugár; his studies were continued under Farkas at the Budapest Academy of Music from which he graduated in 1960. Since attending Petrassi's master classes at the Accademia di S. Cecilia, Rome (1961-3), he has lived in Hungary as a freelance composer. Awards that have been made to him include the Atn Prize for *Episodi sul tema BACH* in 1963, the third prize in the Jeunesses Musicales competition at the Montreal Expo '67 for his String Quartet no.1, the Erkel Prize (1968) for that same work and for *Una rapsodia ungherese*, the second prize in the Bartók Competition for the String Quartet no.2 in 1970 and a Koussevitzky special citation (1971) for the recording of his *Fioriiture*. During the 1960s and early 1970s foreign broadcasts and performances established him as the best-known Hungarian composer of his generation.

The year 1959 marked an important turning-point in Hungarian music, when composers began to follow new technical directions, casting aside the slavish imitation of Kodály that had been the dominant trend. Durkó, after his studies in Rome, was well placed to take a leading part in the foundation of a style drawing on international developments, just as Kodály and Bartók had evolved a national style in an earlier period. The foundation of Durkó's own music may be taken from ideas 'that have been scattered in history and in our consciousness'; such ideas, or 'relics', may be medieval

melodic formulae or rhythms or ornaments taken from folk traditions, they may be employed as a *cantus firmus* or, more frequently, present as a less tangible influence. For example, the rubato of gypsy musicians, the melisma of peasant dirges and the ornamentation of the *verbunkos* style are transmuted in *Fioriture*, affecting melody, rhythm and orchestration. Indeed, the characteristic folk timbres of clarinet, violin and cimbalom are often present in Durkó's work. The one aspect of peasant music that has not influenced him is its modality, since all of his music is atonal.

There is a clear line of development in Durkó's output from the predominantly instrumental early works, in which textless voices were used merely as another timbral resource (e.g. *Fioriture*, *Altamira* and *Colloides*), through the culmination of the Second Quartet (1969–70) to a series of works setting Hungarian poetry. The literary link is a further tie with the national tradition (two of the cantatas have texts by Ady, a favoured poet of Bartók), and the evolution has been accompanied by changes in Durkó's treatment of melody and harmony. His earlier music was characterized by webs of tiny motifs moving within narrow ranges and in constant variation, while the later work replaces these with broad melodic planes, more attuned to vocal possibilities. Similarly the early cluster-like harmonies have given place to chords dominated by certain intervals. In form, Durkó's earlier works consist of strings of short structures built on identical cells; these structures may follow a determined order, which Durkó terms 'organismo', or the order may be variable, the form in this case being termed 'psicogramme'. On the other hand, the overall form takes greater importance in his music after *Cantilene* and the Second Quartet. Within the broad development of Durkó's music, however, there is considerable variety of genre and style. His handling of rhythm remains wide in scope: some works, such as *Altamira*, have a clear, fluid pulse, while in others the perception of metre is lessened through the intervention of chance in the small-scale structure (e.g. the wind quintet and *Fioriture*), although in these works dynamics and articulation are marked precisely. Durkó's essential position is that of a classical artist, holding a balance between tradition and novelty, his emotional expression marked by noble reserve.

Durlach. South-west German city; see KARLSRUHE.

Durme, Jef [Jozef] van (b Kemzeke-Waas, 7 May 1907, d Brussels, 28 Jan 1965). Belgian composer. He studied harmony with Louis de Vocht and counterpoint with Alpaerts at the Antwerp Conservatory. For further studies he went to Vienna where he received advice from Alban Berg. After that composer's death he wrote *In memoriam Alban Berg* for orchestra, and for a long time his style and technique were influenced by Berg. From 1941 he reverted to more characteristically Flemish traits of style.

CORNEL MERTENS

Durocher (fl 1733). French organist and composer. He was author of one of the very few collections of French harpsichord music to be set in type, *Pièces de clavecin . . . première suite* (Paris, 1733); according to the title-page, he was organist at St Jean de Luz. Most of the pieces in his only known work are in two-part texture, melody and accompaniment, reducing the traditional French harpsichord style to its simplest terms. A late example of the unmeasured prelude, printed throughout in alternating semibreves and minims, begins the book.

DAVID FULLER

Durollet [Du Rollet], **Marie François Louis Gand Leblanc.** See ROULET, MARIÉ FRANÇOIS LOUIS GAND LEBLANC.

Durón, Diego (b Brihuega, c1658, d Las Palmas, 15 March 1731). Spanish composer. He was the elder half brother of Sebastián Durón, with whom he has been often confused. He studied at Cuenca with Alonso Xuárez until 1675, the next year he became *maestro de capilla* of Las Palmas Cathedral, where he remained until his death despite frequent invitations back to the peninsula, beginning with Teruel Cathedral in 1684.

Ironically his enormous surviving repertory of 422 villancicos and 38 Latin works (including three Masses, two *Salve regina* settings and three Lamentations; all in *E-LPA*) preceded his more famous half-brother's in being catalogued and in beginning to be recorded. The superb élan and richness of the instrumentation of his eight-voice Christmas villancico of 1690 *Ya rompen sus velos* reveal one facet of his genius, while the expressiveness of his contrasting four-voice Latin motets *Adjuva nos* and *Hodie nobis* shows equal power.

 ROBERT STEVENSON

Durón, Sebastián (b Brihuega, baptized 19 April 1660; d Cambó, 3 Aug 1716). Spanish organist and composer. He was the first child of the church sacristan of Brihuega, Sebastián Durón (1626–68), and his second wife Margarita Picazo (1634–after 1685). He had two younger brothers, Francisco and Alonso (both born before November 1662) and three sisters, two of whom became Jeronymite nuns in the convent of S Ildefonso in Brihuega. Sebastián Durón was not *maestro de capilla* at Las Palmas as has been stated: that position was occupied by DIEGO DURÓN, his half-brother.

Durón's first known organ teacher was Andrés de Sola, who on 12 January 1672 succeeded his uncle Joseph Ximénas as first organist of Saragossa Cathedral. On 19 June 1679 Sola's recommendation that Durón be his paid assistant was approved, but Durón held that position for only nine months before being appointed second organist at Seville Cathedral, with an annual salary of 600 ducats. The *maestro de capilla* there was Alonso Xuarez, who had taught Diego Durón, and who promoted Sebastián as a suitable candidate for the vacant position. At the competition, held on 14 March before three judges, Durón secured the post by a majority of 38 votes. He remained in Seville until 24 September 1685, during which time he composed several villancicos and liturgical works for the cathedral choir, and also took minor ecclesiastical orders. In autumn 1684 he began to negotiate for the post of organist at the cathedral of Burgo de Osma which, although less wealthy than Seville, offered a prebend (which Durón as a deacon was entitled to hold) with the organistship. His application, supported by Xuarez, was accepted and he took up the post in October 1685. His annual salary was 150 ducats; presumably the prebend brought him additional income. In December 1686 he left Burgo de Osma for a more lucrative appointment at Palencia Cathedral, where he spent five years teaching, composing and building up his reputation as a virtuoso.

On 23 September 1691, seven months after José Sanz's retirement, Durón succeeded him as organist at the royal chapel in Madrid under the principal organist José de Torres. In 1702 he became royal *maestro de capilla* and rector of the royal choir school. He composed numerous zarzuelas and operas for the royal theatre, of which he was director. However, he sided against Philip V during the War of the Spanish Succession and consequently was forced across the border into exile in 1706. The rest of his life was spent mostly at Bayonne, France, but from 1712 to 1714 he was in nearby Pau. He seems to have acted as chief almoner to Mariana of Neuburg from 25 October 1715 until his death. His will directed that the income from his considerable estate be used to endow the chapel of Nuestra Señora de la Zarza in the Brihuega church where he was baptized.

Durón wrote a vast amount of both sacred and secular music. His organ music and Latin liturgical works are predictably conservative, but his zarzuelas and other works show marked Italian influence, as well as a fondness for native music such as *seguidillas*. He

was among the first in Spain to write cantatas with da capo arias and recitative. His Italian-orientated style made him the subject of a bitter attack by the Benedictine monk Benito Jerónimo Feijóo published in 1726: Feijóo accused Durón of corrupting Spanish music with 'foreign admixtures', of trying to illustrate musically every word in a text and extending the technical demands on string players, thus inspiring 'childlike transports far distant from the sober attention due to the sacred mysteries'. The virulence of Feijóo's attack is a measure of Durón's importance as an innovator. He was highly esteemed by his contemporaries: Pedro Vaz Rego, the retired *mestre de capela* of Évora Cathedral, Portugal, called him 'the wonder of his time'; and references to him in Pedro Joseph Bermúdez de la Torre's *Triunfos del Santo Oficio Pervano* (Lima, 1737) make it clear that his reputation had travelled to Peru.

WORKS

SACRED

Dürr, Alfred (b Charlottenburg, Berlin, 3 March 1918). German musicologist. After 1945 he studied musicology under Rudolf Gerber and classics under W.-H. Friedrich and K. Latte at the University of Göttingen; he gained his doctorate there in 1950 with a dissertation on Bach's early cantatas. From 1951 he was a research assistant at the Johann-Sebastian-Bach-Institut in Göttingen and from 1962 he has been acting director there. Since 1953 he has edited the *Bach-Jahrbuch* with W. Neumann. As a Bach scholar, Dürr is a principal contributor to the Bach Neue Ausgabe sämtlicher Werke of which he has edited several volumes. His standard works on Bach (particularly on the chronology of his output and on the cantatas) are the result not only of purely musical research, but also of the investigation of other considerations such as the theological and historical aspects of Bach's work and detailed analysis of the sources.

HANS HEINRICH EGGBRECHT

Dürr, Walther (b Berlin, 27 March 1932). German musicologist. He studied musicology under Gerstenberg from 1951 to 1952 at the Free University of Berlin and at Tübingen University, where he took his doctorate in 1956 with a dissertation on rhythm and metre in the Italian madrigal. In 1956 he held a scholarship at the institute of German language and literature at Bologna University; from 1957 to 1962 he was research assistant and lecturer there. He then became research assistant and lecturer at the department for foreigners at Tübingen University until 1965, when he joined the

editorial board of the Neue Schubert-Ausgabe in Tübingen. In 1977 he was made an honorary professor of the University of Tübingen.

HANS HEINRICH EGGBRECHT

Dürrner, Johann (Rupprecht Julius). German 19th-century Kantor; see ANSBACH

Dürschmied, Carl. See TÜRSCHMIED, CARL.

Duruflé, Maurice (b Louviers, 11 Jan 1902). French organist and composer. From the age of ten he attended a choir school, where he was taught the piano and organ by J. Haelling. In 1919 he moved to Paris and studied with Tournemire, whose deputy at Ste Clotilde he later became. He entered the Conservatoire in 1920 and took lessons with Gigout (organ, *premier prix*, 1922), Jean Gallon (harmony, *premier prix*, 1924), Esty (accompaniment, *premier prix*, 1926), Caussade (fugue, *premier prix*, 1924) and Dukas (composition, 1928). In 1930 he was appointed organist of St Etienne-du-Mont and his *Prélude, adagio et choral varié sur le 'Veni Creator'* won a prize from the Amis de l'Orgue. He attracted further notice with the *Trois danses* and the *Organ Suite*; in 1936 he received the Blumenthal Foundation Prize. Duruflé deputized for Dupré in the organ class at the Paris Conservatoire in 1943 and was appointed professor of harmony, a position he held until 1969. In 1947 Désormière conducted the première of the Requiem, Duruflé's finest and most frequently performed work. Duruflé's music shows an ability to maintain the suppleness of Gregorian melody while decking it with brilliant modal harmonies or surrounding it with polyphony. As an organist he has toured Europe, Russia and the USA. His long-standing admiration for Vierne and Tournemire is demonstrated in his transcriptions of some of their improvisations.

WORKS

Dušek, František (b Dolní Dobrouč, 1 Sept 1780; d Dolní Dobrouč, 18 May 1844). Czech choirmaster, sometimes confused with FRANTIŠEK XAVER DUŠEK

Dušek [Duscek, Duscheck, Dussek], **František Xaver** (b Chotěborky, nr. Jaroměř, Bohemia, baptized 8 Dec 1731; d Prague, 12 Feb 1799). Czech composer, pianist and music teacher. The son of a peasant, he was enabled by his patron, Count Johann Karl Sporck, to attend the Jesuit Gymnasium at Hradec Králové. Later he studied music in Prague with F. Habermann and in Vienna with Wagenseil. Not later than 1770 he settled in Prague, where he became very influential as a music teacher and pianist. The most outstanding of his pupils were Kozeluch, J. Vítěšek and V. Mašek. As a composer he appears to have had some connection with the orchestras of Count Pachtá and Count Clam-Gallas. Dušek's house was an important centre of Prague musical life and was visited by many musicians from abroad. He and his wife were probably among those who invited Mozart to witness the Prague success of *Le nozze di Figaro* (January 1787). In the Dušek's summer residence, the villa Bertramka at Smíchov near Prague, Mozart completed *Don Giovanni* (October 1787) and probably also *La clemenza di Tito* (September 1791).

Of the native Bohemian musicians of the second half of the 18th century Dušek was the most prominent composer of secular music. Most of his works were written between 1761 and 1796, their style varies between the *galant* and high Classical, but some Baroque traits also occur. His symphonies and string quartets date mostly from the 1760s. The symphonies are in either three movements, fast slow fast, or four in Classical order; the string quartets have mostly four movements. The first movements are in sonata form with two subject groups, usually without marked contrast, and short development sections. Some of the finales are remarkable as early specimens of elaborate rondo form. His concertos and concertinos, as well as his sonatas, show a transition from harpsichord toward piano style; their melodic figurations are much like those of Wagenseil, but in the solo part the hands are more equally balanced. The solo keyboard works were written mainly as teaching material. Most of them are three-movement cycles of sonatina proportions with the accent on expressiveness. Dušek's melodic inspiration is notable for its occasional use of Czech idioms and slight tinges of melancholy in the minor-key movements.

MILAN POŠTOLKA

Dušek [Dušková] [née Hambacher], **Josefa** [Duscheck, Josepha] (b Prague, baptized 6 March 1754; d Prague, 8 Jan 1824). Czech soprano. She was a pupil of F. X.

Dušek and married him on 21 October 1776. The Dušeks occasionally visited Salzburg, the home town of Josefa's mother, and a result of their meeting the Mozart family there in August 1777 was the recitative and aria *Ah, lo previdi* K272, composed for Josefa. In spring 1786 Mozart accompanied her at a private concert before the Viennese court and in 1787 wrote for her the recitative and aria *Bella mia fiamma, addio* K528 (dated Prague, 3 November 1787). In 1789 she sang at Mozart's concerts in Dresden and Leipzig.

During her long career, which lasted from the 1770s to the first decade of the 19th century, Dušek sang at various concerts and academies in Prague, Vienna (1786, 1798), Salzburg (1777, 1786), Dresden (1785–9), Weimar (1788), Leipzig (1789, 1796), Warsaw and Berlin. Her repertory included operatic and concert arias by Mozart, J. G. Naumann (*Amphion, Orpheus*), Beethoven (she gave the first performance of *Ah, perfido* op.65 on 21 November 1796 in Leipzig), F. D. Weber (*König der Genien*) and others. She also sang in the Prague performances of Kozeluch's Coronation Cantata (1791), Haydn's *The Creation* (16 March 1800, 10 April 1803) and *The Seasons* (December 1803) and Handel's *Messiah* (1 April 1804). She was appreciated for the sonority, range and flexibility of her voice, for her musicianship and superb execution of both bravura arias and recitatives. Even her detractors Schiller and Leopold Mozart agreed on the dramatic expressiveness of her singing.

For bibliography see DUŠEK, FRANTIŠEK XAVER

MILAN POŠTOLKA

Dushkin, Samuel (b Suwalki, 13 Dec 1891, d New York, 24 June 1976) American violinist of Polish birth. After being taken to the USA as a child, his talent was discovered at the Music School Settlement of New York, and he became a protégé of the American composer, Blair Fairchild, who brought about his studies with Rémy (violin) and Ganaye (composition) at the Paris Conservatoire, and with Auer and Kreisler in New York. Dushkin began to tour in Europe from 1918, and in the USA from 1924, when he first appeared with the New York SO. As well as making a number of successful transcriptions of works by other composers for his own use, he became known as a persuasive advocate of contemporary music, a reputation consolidated by his friendship with Stravinsky, who composed for him his Violin Concerto (1931) and *Duo concertante* (1932). Stravinsky, in his autobiography, praised Dushkin's 'remarkable gifts as a violinist, a delicate understanding and, in the exercise of his profession, an abnegation that is very rare'. With the composer's collaboration, Dushkin made several transcriptions from Stravinsky's stage works and, with these and the *Duo concertante*, undertook extensive European tours with Stravinsky as pianist between 1932 and 1934. They also recorded these works; Dushkin later described their collaboration (in *Igor Stravinsky*, ed. E. Corle, New York, 1949). He also published teaching manuals for the violin and editions of Baroque and Classical violin works (some of them in fact his own compositions attributed to earlier composers, including (3) Johann Benda and Boccherini).

NOËL GOODWIN

Dusiacki, Kazimierz Stanisław Rudomina (b Dusiat, nr. Dynaburg [now Daugavpils]; fl 1620). Polish or White Russian lutenist and composer. He was in Italy studying the lute and possibly also composition with Donino Garsi in 1620–21 when the latter compiled for him a manuscript of lute pieces in French tablature (formerly *D-Bds* 40153), which has been lost since World War II; it contained several Polish dances by him.

MIROSLAW PERZ

Dusik. See DUSSEK family.

Dusikova, Veronika Elisabeta. Bohemian musician, see DUSSEK family, (4).

Dusinello, Giuseppe (b Venice, ? between 1540 and 1550; d after 1574). Italian composer and instrumentalist. He was engaged on 1 November 1567 as trumpeter at the court of Emperor Maximilian II, and several gifts of money indicate that he was esteemed there. One of them probably relates to a composition that he dedicated to the emperor in 1570 and another to a trip to Venice in 1574, made on the emperor's instructions, to obtain musical instruments. His name does not appear in court records after Maximilian's death (12 October 1576). His only known composition is a four-voice mass (in *A-Wn*, ed. W. Pass, TM, xlviii, in preparation).

WALTER PASS

Dušková, Josefa. See DUŠEK, JOSEFA.

Dussek [Dusik, Dussik]. Bohemian family of musicians. The spelling 'Dussek' is the normal one in English and German literature, and was the form used by the most important member of the family, (2) Jan Ladislav, the original Bohemian spelling is 'Dussik' and present-day Czech 'Dusik'.

(1) **Jan (Josef)** [Johann Joseph] **Dussek** (b Mlázovice nr. Hořice, 16 Aug 1738, d Čáslav, 24 June 1818). Organist and composer. A well-known musician in his day, he was an organist and elementary school teacher in Čáslav, where he married the daughter of the local judge, Veronika Štěbetová, a talented harpist. He was responsible for the early musical training of the three of his eight children who became noted musicians.

(2) **Jan Ladislav** [Johann Ladislaus (Ludwig)] **Dussek** [Dusik] (b Čáslav, 12 Feb 1760; d St Germain-en-Laye or Paris, 20 March 1812). Pianist and composer, son of (1) Jan Dussek.

1. **LIFE.** Despite conflicting evidence, the date of birth given above is confirmed by baptismal records. He began to learn the piano at the age of five and the organ at nine. Because of his fine voice he was sent as a chorister to the Minorite church in Iglau (now Jihlava) and later he was a pupil at the Jesuit Gymnasien there and at Kutná Hora. Later in Prague he attended the New City Gymnasium for the school year 1776–7, and the University of Prague for one term in 1778.

Under the patronage of a captain of the Austrian artillery, Count Männer, Dussek travelled in 1779 to Malines (now Mechelen), where he stayed as a piano teacher (for an undertermined period) and also appeared in public as a pianist (16 December 1779). He then went to Bergen op Zoom and Amsterdam, and to The Hague, where he seems to have stayed for about a year giving lessons to the children of the Stadtholder, William V. During all this time his playing was winning him a brilliant reputation. In 1782 he arrived in Hamburg, where he gave a concert on 12 July and met C. P. E. Bach, who is said to have advised or actually taught him. In 1783 Dussek was in St Petersburg, where he performed at the court of Catherine II. There is a story that he was later implicated in a plot against the empress and had to flee to Lithuania, where he became Kapellmeister to Prince Karl Radziwill for about two years. On leaving the service of Prince Radziwill, probably towards the end of 1784, he made an extended concert tour of Germany, performing on the glass harmonica as well as the piano. This tour included performances in Berlin, Mainz, Kassel, Frankfurt am Main, and possibly Dresden and Ludwigslust. Towards the end of 1786, in the company of the steward (*Hofmeister*) of the French ambassador to Berlin, he travelled to Paris, where he appeared before the court and was particularly noticed by Marie Antoinette; he also made the acquaintance of Napoleon. He remained in Paris performing and teaching until early 1789, except for a short trip to Milan to perform and to visit his brother (3) Franz Benedikt Dussek.

At the time of the French Revolution Dussek fled to England. Because of his connections with the aristocracy in Paris he was unpopular with the Revolutionary regime, and like many musicians of the time he took refuge in London. He spent the next 11 years in London, where he became very popular as a piano teacher and appeared frequently in concerts, first at the Hanover Square Rooms on 1 June 1789. He was a frequent performer at Salomon's concerts, and appeared with Haydn during his two visits to London. In a letter to Dussek's father (26 February 1792) Haydn paid him one of the highest compliments he ever received:

I consider myself fortunate in being able to assure you that you have one of the most upright, moral, and, in music, most eminent of men for a son. I love him just as you do, for he fully deserves it. Give him, then, daily a father's blessing, and thus will he be ever fortunate, which I heartily wish him to be, for his remarkable talents.

On 31 August 1792 in St Anne's Church, Westminster, Dussek married Sophia Corri (see §(5) below), who became famous as a singer, pianist and harpist. During the remainder of his stay in London, he was associated with his father-in-law, Domenico Corri, in a music publishing business (Corri, Dussek & Co.), which printed many of his works. While in London he also encouraged the firm of Broadwood to extend the range of the piano - in 1791 from five to five and a half octaves, and in 1794 to six octaves. Compositions written for the extended keyboard were said to be for 'piano with additional keys'; many compositions of this period were published with two versions for the right hand, so that they could be performed 'with or without the additional keys'.

Neither Dussek nor Corri was a businessman, and when the publishing business ran hopelessly into debt Dussek fled to Hamburg (late 1799), leaving his father-in-law to be jailed for bankruptcy. Although Dussek

wrote to his wife later, there is no evidence that he ever saw her or their daughter, Olivia, again.

Dussek appeared in concerts in Hamburg and met the violinist Ludwig Spohr. In mid-1802 he made a long-projected trip to Čáslav to visit his parents and to give a concert; he played there twice (14 and 15 September), with the horn player Giovanni Punto. In October he gave three concerts in Prague with great success. The pianist and composer Václav Jan Tomášek was much impressed by his playing, and reported that Dussek was the first to place the piano sideways on the stage so that the audience could see the performer's profile.

From October 1804 to October 1806 Dussek was Kapellmeister to Prince Louis Ferdinand of Prussia, himself an excellent musician and composer. Spohr, in his autobiography, reported on the wild and reckless life they led together as they travelled with the prince from one battlefield to another. The prince's death at the battle of Saalfeld (10 October 1806) occasioned Dussek's well-known piano sonata *Elégie harmonique sur la mort du Prince Louis Ferdinand de Prusse* op.61 (c211). Early editions of this work published by Pleyel and by Breitkopf & Härtel were annotated: 'L'auteur, qui a eu le bonheur de jouir du commerce très intime de S. A. R. ne l'a quitté qu'au moment, où il a versé son précieux sang pour sa patrie'. After the prince's death Dussek briefly served Prince Isenburg, and then in September 1807 accepted a position with Talleyrand in Paris, where he remained until his death. During this period he taught a few piano pupils and gave numerous concerts, often at the Odéon, with the violinists Rode and Baillot and the cellist Lamare. In a review of one such concert, on 22 December 1808, Méreaux wrote:

In 1808, in one of the concerts given at the Odéon by Rode and Lamare, he obtained a triumph without precedent. The violin and violoncello, accustomed to being kings of all concerts, were eclipsed this time by an Erard piano under the enchanted fingers of Dussek, who had a magic of performance, a power and a charm of expression which were truly irrevocable.

During the last months of his life Dussek was obese and spent much of his time in bed. He also drank too much; he died of gout. His burial place is not known. The *Allgemeine musikalische Zeitung* carried a lengthy obituary by its Paris correspondent eulogizing Dussek's abilities as a pianist and composer.

2. WORKS. Dussek is an unjustly neglected composer. Admittedly some of his more insignificant works (e.g. rondos and variations on popular tunes of the day) are trivial and deservedly forgotten, but there is a body of piano sonatas, piano concertos and chamber works that are of sufficient musical worth to be performed and enjoyed today. His music seems to have been received with enthusiasm in his own time; reviews of the original editions in the Leipzig *Allgemeine musikalische Zeitung* praise Dussek's originality and expressiveness, and the appropriateness to the piano of his melody, harmony and scoring - though they do point out such irregularities as consecutive 5ths and octaves and improper dissonances.

Dussek was one of the early touring concert pianists, so it is not surprising that most of his works are for piano or include piano. In view of the time at which he lived it might be expected that his music would be primarily Classical in style. This is true of the early works, but those composed in the last 20 years of his life show definite Romantic characteristics in the expression markings, the use of full chords, the choice of keys, and

Jan Ladislav Dussek stipple engraving by Jean Godefroy

the frequent modulations to remote keys and in the use of altered chords and non-harmonic notes. His harmony includes a wider variety of chords and is considerably more chromatic than that of Mozart, Haydn and even Beethoven. His piano music is in general fuller in texture than that of C. P. E. Bach, Mozart or Haydn. He showed a predilection for modulating to the key a semitone above or below.

Dussek's piano style, as might be expected, is often brilliant and virtuosic in character: octaves, 3rds, double 3rds, rapid scale passages and all types of pianistic figuration are exploited, some of which anticipate piano writing later in the 19th century. The music is always pianistic. Although his early piano works are only moderately difficult, the technical demands became much greater from about 1797, with the Sonata in B \flat C149. Specific pedal indications appeared occasionally from about 1798, the date of the 'Military' Concerto op.40 (C153), though doubtless these markings indicated only special effects, and the ordinary pedalling of the piece was left unmarked.

As has been frequently observed, much of Dussek's music resembles that of other composers. Most often, however, these composers are later than Dussek, and such resemblances show him to have been very much ahead of his time in the development of a Romantic piano style. The second movement of C166 and the first of C179 anticipate Schubert, for example, and the first movements of C151 and C168 and the second of C62 Beethoven. Other works foreshadow Weber (first movement of C149), Rossini (second of C59), Mendelssohn (C80 and C211, second movements), Chopin (fourth movement of C221, second of C259) and Schumann (C178 and C259, fourth movements); still

others suggest styles as late as Liszt's, Smetana's, Dvořák's and Brahms's.

Dussek's works were remarkably popular in his lifetime; most were reprinted at least once, and some as many as ten times (some important works appeared in as many as three different editions by Breitkopf & Härtel alone, who issued a 12-volume collected edition of his works just after his death). He quickly fell into disregard, however, and his name does not appear at all in the letters of Beethoven, Mendelssohn, Schumann, Chopin or Moscheles. Between 1860 and 1880 a revival of interest in Dussek brought about new editions of the piano sonatas by Breitkopf & Härtel and Litolf, as well as many performances of them, particularly in London

WORKS

For fuller list with thematic index, including editions and arrangements of works by other composers, see *Craw*. Dates in parentheses show year of earliest known edition. Manuscripts are all autograph unless otherwise stated. Numbers assigned by *Craw* are indicated by c; doubtful or spurious works by d.

(3) **Franz Benedikt Dussek** [František Josef Dusík] (b Čáslav, 22 March 1766; d Zatičina, after 1816). Composer, son of (1) Jan Dussek. He was taught music by his father for whom, at quite an early age, he was proficient enough to deputize at the organ. He played the violin, cello and piano. Later he went to Italy, where he wrote a number of serious and comic operas (including *La caffettiera di spirito*, *La feudataria*, *L'impostore* and *Roma salvata*), an oratorio (*Gerusalemme distrutta*), piano and violin concertos and several chamber works (of which a Serenade, a Trio ou Notturmo for three flutes, and a Sonata for violin and piano op.2 were published).

(4) **Kateřina Veronika Anna Dusíková** [Veronika Rosalia Dussek; Veronika Elisabetha Dusikova; Veronica Cianchettini] (b Čáslav, 8 March 1769; d London, 1833). Singer, pianist and harpist, daughter of (1) Jan Dussek. A pupil of her father, she went to London about 1795 to perform at the invitation of her brother (2) Jan Ladislav Dussek. She married Francesco Cianchettini, a music dealer and publisher who in association with Sperati had the English rights for J. L. Dussek's works from 1807 to 1811. She was a successful teacher and performer, and composed two concertos and some solo piano works. Her son Pio Cianchettini was a pianist and composer.

(5) **Sophia (Giustina) Dussek** [née Corri] (b Edinburgh, 1 May 1775, d London, 1847). English singer, pianist, harpist and composer of Italian descent, wife of (2) Jan Ladislav Dussek. She was taught by her father, Domenico Corri, and played the piano in public at an early age. The family moved to London in 1788 and she often appeared there as a singer, her singing teachers were Marchesi, Viganoni and Cimarosa. After her marriage she performed with Dussek in concerts as a singer, pianist or harpist. After his death she married John Alvis Moralt, a violist, in 1812; they lived in Paddington, where she established a music school. Her compositions are mainly sonatas, rondos and variations for the piano or harp. Her daughter, Olivia Dussek (dates uncertain), also musically gifted, played the piano, harp and organ. She married a man by the name of Buckley and is reported to have been organist of Kensington parish church, although her name does not appear in the registers of the period.

Düsseldorf. City in the Federal Republic of Germany. Originally a village on the Düssel, now a large city on the Rhine. The musical history of Düsseldorf is characterized by the cultivation of music at the court (15th–18th centuries) and by the civic Niederrheinisches Musikfest (since 1818). Documents relating to the earliest period of musical culture are now lost; the earliest important church is St Lambert's (1390), but the first record of musical activity is a 15th-century Easter play with vernacular songs from Gerresheim, a suburb. Various 16th-century works were printed in Düsseldorf: motets by the Flemish composer Martin Peudargent in

1555 and 1561, an introduction to music by his pupil Johann Oridryus and *Die Psalmen Davids* by Konrad Hagius from Westphalia in 1589. The town was also visited by the Flemish composer Jean de Castro.

In 1614 Düsseldorf became the residence of the Count Palatine, and many musicians were attracted from Italy. The Roman Giovanni Giacomo Neri and Gilles Hayne from Liège worked together there. Biagio Marini lived in Düsseldorf for 22 years, and in the middle of the century Carissimi had charge of the town's musical life. His pupil Giovanni Battista Mocchi wrote incidental music for school plays and operas. During this period two of the most important churches were founded, St Andrew's (1629) and the Neanderkirche (1684), named after the pastor and hymn writer Joachim Neander. Under the Elector Johann Wilhelm (1692–1716) music in Düsseldorf had an international reputation. Corelli dedicated his last opus (12 concerti grossi) to the prince, and the opera was directed by Steffani, who performed five new works. The fullest account of the period is a panegyric by the librettist Georgio Maria Rapparini (1709), which mentions Johann Hugo von Wilderer (a pupil of Legrenzi), Georg Kraft, Johannes Schenck, Johann Sigismund Weiss, Carlo Luigi Pietro Grua (from Milan), noted for his chamber cantatas, Stefano Benedetto Pallavicino (from Venice), and Sebastiano Moratelli (whose compositions are lost). In 1711 Handel went to Düsseldorf to secure the castrato Baldassari for the London opera, and in 1715 the violinist Francesco Veracini played in Düsseldorf.

In 1720 the court moved to Mannheim. After the Napoleonic wars local music lovers founded a municipal music society to perform concerts and church music and to promote large-scale musical performances, especially at Whitsuntide. The Niederrheinische Musikfest opened with Haydn's oratorios. The leading musicians at this time were A. Friedrich Burgmüller and his son Norbert. In 1833 Mendelssohn, while enjoying great success as a conductor in Düsseldorf, composed and conducted his first oratorio, *St Paul*, and his activities gave the orchestra a leading position in the city's musical life. His association with Düsseldorf ended after three years through controversy with Immermann, the director of the theatre. Meanwhile musical life continued to flourish. In 1849 the conductorship was offered to Schumann, but his tenure was unsuccessful and he was induced to resign in 1853. While in Düsseldorf he wrote his Third Symphony and his famous essay about the young Brahms. In 1864 the municipal orchestra was founded, and in 1866 the Tonhalle concert hall (destroyed in World War II) was inaugurated by Clara Schumann, Jenny Lind and Julius Stockhausen. In 1890 Julius Butts was appointed conductor; he promoted contemporary music (Richard Strauss, Mahler and Reger) and performed choral works by Elgar, translating the English texts into German. Butts and his friend Otto Neitzel founded a conservatory which became the Robert Schumann-Institut der Musikhochschule Rheinland; the city also has a music school.

The opera house was rebuilt in 1958 and houses the Deutsche Oper am Rhein, which performs classical and modern works and has its own ballet. The Städtische SO gives 12 concerts during the year, some with choral societies; the concerts of the Bach-Verein are generally of early music. The city's other cultural organizations including the Musikverein, promote concerts with inter-

national soloists and orchestras, and jazz and folk music concerts. The two main concert halls are the Rheinhalle and the Schumannsaal. The hall of the Academy of Art and the orangery of the Chateau Benrath (1773) are used for chamber music.

WOLFDIETR MEINARDUS

Dussik. See DUSSEK family.

Dutar [dutār]. Long-necked two-string fretted lute which occurs in various forms in western and central Asia, see AFGHANISTAN, §§3, 6, 8-9; CENTRAL ASIA, §§1, 2, 5, IRAN, §§1, 3, 5, TĀR, UNION OF SOVIET SOCIALIST REPUBLICS, §§1, 3, 6-8, 9(iii-iv)

Du Tartre [Dutartre], **Jean-Baptiste** (d Paris, 1749). French composer. His date of death was given by Fétis. He worked in Paris as *maître de musique*, and may have been associated with the household of the Prince de Vaudémont, to whom most of his larger works are dedicated. Du Tartre's music became known in 1714 when his *Miserere mei Deus*, a motet for three soloists, choir and instruments, was twice performed by the Musique du Roi in the presence of the king. A few weeks later the cantata-like *Divertissement pour la paix* was sung before the Prince de Vaudémont, the following year receiving a performance at the Opéra, where shortly afterwards some of his *airs* were sung at a performance of *Zéphire et Flore* (presumably the opera by Lully's two sons which, written in 1688, enjoyed a single revival in 1715). His cantata *La paix* was twice performed at Philidor's concerts at the Tuileries (2 April 1728, 4 July 1729). Within the limits of an urbane, Rococo style, Du Tartre's music reveals a genuine melodic gift, seen at its best in *Divertissement pour la paix*, *Homage funèbre*, the cantata *La volupté*, and above all in the many *airs sérieux et à boire* which appeared in his own collections and in anthologies published in France and Holland up to the middle of the century.

Du Tertre, Estienne (fl Paris, mid-16th century). French composer. Only a few details have come down to us concerning his life. In Laborde's *fichier*, Du Tertre is listed as an organist; this entry also tells that in 1556 he and the lutenist Brayssing acted as godfathers at the christening of the son of a court musician, Pierre Joly. Other information about Du Tertre, who appears to have passed all his creative years in Paris, comes from title-pages of the publications in which his works appeared.

Du Tertre's output includes 57 complete four-part chansons, and 14 more which survive in incomplete form. He served as editor, composer and arranger for Attaignant's final collection of ensemble dances, the *VII^{me} livre de danceries*, printed by Attaignant's widow in 1557. Since his chansons came out between 1543 and 1568, some changes in his musical style can be observed. The four earliest chansons are densely contrapuntal, low in tessitura and serious in nature. They show certain musical and poetic interrelationships with other contemporary chansons of Sandrin and Claudin. But the great bulk of Du Tertre's chansons formed part of a huge number published in the late 1540s and early 1550s, when Du Chemin's output rivalled Attaignant's. In the 26 chansons which Du Tertre published with Attaignant, and the 26 published with Du Chemin, Du Tertre used a more homophonic texture and clear-cut form. Most of the poems which he set were *huitains*, concerning unfulfilled love. Several are lively, bawdy rondeaux set contrapuntally. Two chansons are homophonic, homorhythmic and dance-like, closely resembling the branles in the *VII^{me} livre de danceries*.

The 14 incomplete chansons, all published after 1552, display great stylistic diversity. Two are *chansons spirituelles*, one is a setting of a Ronsard ode, seven are light, bawdy patter songs, three are serious love songs, and one is a homophonic *chanson à danser*.

Du Tertre set many of the same chanson texts as Certon, Gervaise and Goudimel. Janequin set 25 of the same texts as Du Tertre, and the musical style of the two composers' settings is often remarkably similar. Most of these texts are anonymous; it is possible that the composers wrote them.

Du Tertre became Attaignant's dance editor in 1557, and, like Claude Gervaise, who had preceded him, Du Tertre made use of the musical style of the chanson in the 33 pavans, galliards and branles of the seventh book. In particular, he used varied writing for each of the four or five parts, clear phrasing and well-defined form.

Du Tertre was the first editor to use the term 'suytte', indicating a group of branles. Vocal and instrumental styles are close in both the chansons and dances of Du Tertre.

WORKS
CHANSONS

(all for 4vv, * = incomplete)

- Aussy tost, 1549¹⁰. Avant que partiez, 1549³. Ca ces beaux yeux, 1550⁸. Ce disoit une jeune dame, 1550¹³. Cent baisers, 1550¹¹. Cent mille fois, 1550¹². Ce qui pour moy, 1549²³. Ces deux flambeaux *, 1559¹². Coeur ennobly *, 1553¹⁰ (chanson spirituelle)
 Dieu doit le bon jour, 1549²³. Elle a pour vrai, 1550¹. En esperant, 1549²⁰. En l'eau, 1547⁶. Et vray dieu, 1550¹⁰. Ferret un jour *, 1557¹⁰. Il n'est que d'estre, 1549²³

CAROLINE M. CUNNINGHAM

Dutilleux, Henri (b Angers, 22 Jan 1916). French composer. His ancestors include a painter and lithographer, Constant Dutilleux, who was a personal friend of Delacroix and Corot. Among his maternal ancestors was Julien Koszul, a friend and co-pupil at the Ecole Niedermeyer of Fauré. Koszul was for a long time the director of the Roubaix Conservatory; here one of his pupils was Roussel, whom he persuaded to leave the navy and devote himself exclusively to music.

While at secondary school, Dutilleux studied piano, harmony and counterpoint at the Douai Conservatory with V. Gallois; then, from 1933 to 1938, he attended the Paris Conservatoire, following the courses of J. and N. Gallon for harmony, counterpoint and fugue, and studying with Busser for composition, Emmanuel for history of music and P. Gaubert for conducting. In 1938 he won the Prix de Rome. Director of singing at the Paris Opéra in 1942, he moved to a similar appointment with French Radio (1943-4), for whom he was director of music productions from 1945 to 1963. He was appointed professor of composition at the Ecole Normale de Musique in 1961, and at the Paris Conservatoire in 1970; for a long time he was on the committee of the French section of the ISCM, and has been a member of the executive committee of the International Music Council of UNESCO. In 1967 he was awarded the Major National Music Prize.

Dutilleux's first works bear the stamp of various influences (notably Ravel's) through which he passed; this derivativeness has driven him to destroy the greater part of his earlier music, and he has expressed reservations about the published works that date from this period. Thus the individual qualities of Dutilleux's music have to be sought principally in the six major works written since World War II. The Piano Sonata (1947) was first performed by Dutilleux's wife, Geneviève Joy, and his First Symphony (1950) received its première under Désormière. Two later orchestral works were first heard in the USA: Münch conducted the Second Symphony (1958-9), subtitled *Le double*, in Boston and *Métaboles* (1964) was conducted by Szell in Cleveland. A ballet score, *Le loup* (1953), was written

for Petit, and *Tout un monde lointain...* (1968-70) has a concertante cello part written for Rostropovich.

A man of wide culture, open to every new development but opposed to dogmatism and intensive systematization, Dutilleux is above all an isolated and independent composer, keeping his distance from any aesthetic school. His distinctive art, at once carefully crafted and free in thought, measured and clear, follows on directly from the music of Debussy, Ravel and Roussel. In 1966 he defined the very specific characteristics which can be found in all his works:

First, in the realm of form, a careful avoidance of prefabricated formal scaffolding, with an evident predilection for the spirit of variation. Further, a penchant towards a certain type of sonority (with priority given to what might be called 'the joy of sound'). Again, an avoidance of so-called programme music, or indeed of any music containing a 'message', even though I do not of course deny in our art a meaning of a spiritual order. And finally, at a more technical level, the absolute necessity of *choix*, of economy of means.

One of the most characteristic elements of the composer's symphonic style is the type of instrumental writing he adopts. In the First Symphony, above all in the first and last movements, he tended to split the orchestra into small instrumental groups which become separated from the whole, with each instrument being treated as a soloist and placed in opposition to an often very dense orchestral sound. This tendency reappeared in the later works, and particularly in the Second Symphony, where the orchestra is divided into two bodies of unequal size: a large orchestra constituted in the normal way, and a small chamber orchestra of 12 players placed in a circle around the conductor. At moments these two bodies confront each other, but they also combine or they may be superposed, with the one sometimes appearing as the mirror of the other. This use of space gives the orchestra a highly individual sound and produces quite new sonorities, while at the same time facilitating effects of polytonality and polyrhythm.

But the composer's originality is equally in evidence in the field of agogics. His musical ideas are never presented at a single stroke; they impose themselves only gradually by a sort of continuous thematic growth, constantly undergoing infinitesimal modifications which foreshadow an idea yet to come or partially refer back to those already heard. Thus the thematic material is continually renewed, giving the musical material that fluidity and improvisatory character which are peculiar to Dutilleux's works. This sort of continuous metamorphosis of sound, to be found in all the composer's major scores, constitutes the underlying formal principle of *Métaboles* and of certain passages in *Tout un monde lointain...*

Dutilleux's works are few, but they are of great breadth, are highly elaborated, and reflect his entire creative personality. He remains attentive to the most diverse musical trends, but rejects anything which might distract him from his own ideas and sensibility; each new work represents a deepening of his thought, an attempt to go further. Yet the guiding principles remain always the same, making Dutilleux's art a shining example of diversity within unity.

WORKS

STAGE

L'anneau du roi, scène lyrique, 1938; *Les hauts de Hurlevent*, incidental music, 1945; *La princesse d'Elide*, incidental music, 1946; *Monsieur de Pourcagnac*, incidental music, 1948; *Hernani*, incidental music, 1952; *Le loup*, ballet, 1953

GERNOT GRUBER

Dutoit, Charles (b Lausanne, 7 Oct 1936). Swiss conductor. At the Lausanne Conservatory he studied the violin with Wachsmuth and theory of music with Mermoud and Haug, from whom he also acquired his early education in conducting. Then he went to Geneva to Baud-Bovy (obtaining a diploma in conducting), and studied the viola with Golan and instrumentation with Marescotti; he took further studies with Galliera and, in 1959, with Münch at Tanglewood. He conducted an amateur orchestra in Renans, 1957-8; in 1959 he became conductor of the choir at the University of Lausanne and, in 1963, of the Lausanne Bach Choir. He became second conductor of the Berne SO in 1964, and in 1967 succeeded Kletzki as principal. He is a regular guest-conductor with the Zurich Tonhalle Orchestra and undertakes many concert tours in Europe and South America, where he has often appeared with his former wife, the pianist Martha Argerich. 20th-century classics form the backbone of his unusually extensive repertoire, particularly works by Stravinsky, which he interprets in an authentic and ever fresh manner.

JÜRGEN STENZL

Dütsch [Dyutsh], **Georgy Ottonovich** (b St Petersburg, 20 Jan 1857, d St Petersburg, 28 Sept 1891). Conductor and folksong collector, son of Otto Johann Anton Dütsch. He studied at the St Petersburg Conservatory (1866-75). After Borodin's death he assisted with the preparation for publication of the vocal score of *Prince Igor*. From 1886 he was principal conductor of Belyayev's Russian Symphony Concerts, and from 1889 he was in charge of the orchestral class at the conservatory. In 1886 he collected the music of 114 folksongs *Pesni russkogo naroda, sobrani v guberniyakh Arkhangel'skoy i Olonetskoy v 1886 godu* ('Songs of the Russian people, collected in the Arkhangel and Olonets governments in 1886'); F. M. Istomin was responsible for the words, and the collection was published in St Petersburg in 1894. Later, Balakirev, Rakhmaninov and Prokofiev all made arrangements of songs in his edition.

EDWARD GARDEN

Dütsch, Otto Johann Anton (b Copenhagen, c1823; d Frankfurt am Main, 21 April 1863). Danish composer and conductor, probably of German descent, father of Georgy Ottonovich Dütsch. He was educated at the Leipzig Conservatory (1842-7) and went to Russia in 1848. He became well known as a conductor and chorus master in St Petersburg and taught theory at the conservatory there from 1862. His most notable composition is the opera *Kroatka* ('The Croatian girl', 1860), of which Rimsky-Korsakov and Balakirev thought highly, in spite of its inadequate libretto. He also wrote incidental music, two operettas, 70 songs, a sonata for two pianos and orchestra, and piano pieces.

EDWARD GARDEN

Duval, Mlle (first name unknown) (b early 18th century; d Paris, ?1769). French composer, dancer, ?singer and harpsichordist. Little is known about her life. We learn from the dedication page of her *Les Génies ou les caractères de l'Amour* that the Prince of Carignan was her 'Protecteur'. She may have been the Mlle Duval who danced secondary roles in Stuck's *Polydore* (1720), Desmarest's *Renaud* (1722) and Mouret's *Pirithoüs* (1723). There is no evidence that she was an 'actrice de l'Opéra' in 1720, as Fétis claimed; and the treatise, *Méthode agréable et utile pour apprendre facilement à chanter juste*, which he attributed to her, was by Abbé Pierre Duval. She may have been the Mlle Duval who composed the air 'Tout ce que vois me rappelle' (*Mercur de France*, June 1776); if so, her death date as given by Fétis, Eitner and others must be questioned.

Her *Les Génies*, a ballet-héroïque in a prologue and four entrées ('Les Nymphes ou l'Amour indiscret'; 'Les Gnomes ou l'Amour ambitieux'; 'Les Salamandres ou l'Amour violent'; 'Les Sylphes ou l'Amour vengé') was first performed at the Paris Opéra on 18 October 1736. Although heard only nine times, its music was praised by many. Desfontaines, for one, found some pieces 'worthy of the harmony of *Les Indes galantes*'. Parfaict described how the audience, with astonishment and pleasure, observed Mlle Duval in the orchestra accompanying her opera on the harpsichord 'from beginning to end'.

JAMES R. ANTHONY

Duval, Denise (b Paris, 23 Oct 1921). French soprano. At first she was undecided between a career in opera or musical comedy. Neither her Bordeaux début in 1947 nor her first Opéra-Comique appearance, as Cio-cio-san the same year, was entirely convincing; but Poulenc selected her for the première of *Les mamelles de Tirésias* (3 June 1947), in which she triumphed. At the Opéra-Comique she also created Hahn's *Le oui des jeunes filles*, with the retiring Gabrielle Ritter-Ciampi. At the Opéra (where she made her début on 20 September 1947 as Salomé in *Hérodiade*), she found parts suited to her beauty and dramatic intelligence such as Thais, the Princess in Rabaud's *Marouf*, Portia in Hahn's *Le marchand de Venise* and Ravel's *Concepción*. The 1957 Paris première of Poulenc's *Les dialogues des Carmélites*, in which she was Blanche, proved a decisive step in her career, and was soon followed by his monodrama *La voix humaine*, in which her performance became widely celebrated (it was seen at the 1960 Edinburgh Festival). In the early 1960s she was an indispensable Mélisande for the Debussy centenary celebrations, notably in Italy and at Vienna and Glyndebourne (1962-3). With her slim figure and irresistible Parisian charm she was among the most gifted singing actresses of her time; she was vocally unfitted for the conventional repertory, and had to abandon the prospect of becoming the first French Lulu because of declining health. She retired in 1965.

ANDRÉ TUBEUF

Duval, François (b Paris, 1672 or 1673; d Versailles, 27 Jan 1728). French violinist and composer. He was the son of a Parisian dancing-master of the same name. It is probably the senior Duval who was listed in the highest rank of the 'Communauté des maîtres à danser

et jouer d'instruments de la ville et faubourgs de Paris' in 1695 and who danced at the Paris Opéra in 1711 in a revival of Lully's *Cadmus*. François senior had died by 13 November 1713. It is not known how or whether this branch of the family was related to the other Duvals (nearly a dozen) who practised music in Paris in the 17th and 18th centuries.

An *air nouveau, Monde trompeur, esperance mortelle*, published in *Le Mercure galant* in December 1699, is probably the first evidence known of the younger Duval's existence. By 1704 he was in the service of the Duke of Orleans, an enthusiastic musical amateur to whom he dedicated his first opus. This was a set of violin sonatas, the first to be published in France; they show a knowledge of the style and technique of Corelli, subtly mixed with the style of the French harpsichord *pièce*. The sonata was regarded by the French at that time as an Italian genre, the few composed in France in the 1690s were circulated in manuscript to a small circle of professionals and connoisseurs. Between the appearance of Duval's op. 1 and that in 1723 of Leclair's op. 1, the earliest French sonatas to earn a permanent place in the repertory, more than two dozen volumes of violin sonatas were published.

Duval had another patron, the Duke of Noailles, to whom he dedicated his op. 2. The duke brought Duval to court to play for Louis XIV, and shortly afterwards Duval brought out an op. 3, dedicating it to the king: in his letter of dedication he stated, 'The most ardent of my wishes is to be able to provide Your Majesty with a few moments of diversion'. His wish was granted in 1714 when he became a member of the Vingt-quatre Violons du Roy and played for the king Couperin's *Concerts royaux* with the composer at the harpsichord, Hilaire Verloge on the viola da gamba and Dubois on the bassoon.

On 13 November 1713 Duval had married Monique Augustine de Behague; the couple apparently had no children, for after his death the only heirs named were his widow and two sisters. Duval spent his last 14 years at the French court, where his contemporaries considered him one of the best of the king's violinists. His music, although not technically advanced when compared to that of Vivaldi or of the slightly later generation of Locatelli, Geminiani, Veracini and Leclair, shows a full grasp of the idiomatic possibilities of the violin as found in the works of such Italians as Corelli and Torelli. Duval's performances of Corelli's sonatas were praised, but how he came by his knowledge of Italian music remains unknown.

NEAL ZASLAW

Duvernoy [Duvernois], **Frédéric Nicolas** (b Montbéliard, 16 Oct 1765; d Paris, 19 July 1838). French horn player, teacher and composer. He was the first major figure of the native French school of horn playing and a musician of considerable intelligence. His playing and teaching marked the definitive break from the parent Austro-Bohemian tradition. He was self-taught and probably the first to turn away from the established practice of dividing horn players into two distinct categories, *cor alto* and *cor basse*. Specializing in the middle register, he created a third category, the *cor mixte*, a technique which he brought to a remarkably high standard; he was considered by many to be the leading player of his day.

In 1788 Duvernoy joined the orchestra of the Comédie-Italienne in Paris, and appeared as a soloist at the Concert Spirituel. Two years later he became a second horn player at the Opéra-Comique and joined the band of the National Guard. Entering the Opéra orchestra in 1796 he became solo horn in 1799, with Buch, Kenn, Vandenbroeck and Paillard composing the ordinary quartet. Some measure of his popularity may be gathered from the bill announcing the much publicized first performance of Spontini's *La vestale* in 1807, the words 'M. Frédéric Duvernoy will play the horn solos' are printed at the head of the cast list in type at least half as large again as that accorded to any other artist. He retired from the Opéra with a pension in 1817.

Napoleon is said to have been a great admirer of Duvernoy's playing; after he had become emperor, Duvernoy was appointed first horn of the imperial chapel, he retained the equivalent of this post under Louis XVIII and Charles X until the 1830 Revolution. He was made a Chevalier of the Légion d'honneur in 1815.

Duvernoy was on the original staff of the Paris Conservatoire, remaining there until 1816. His *Méthode pour le cor*, published in 1802, broke new ground by insisting that the student should limit himself to either the 'first horn' or 'second horn' register. Far from being the *cor mixte* tutor that Fétis labelled it, it is a useful point of departure for teaching hand-horn technique. Duvernoy wrote several solo and double concertos, solos with piano, duets and trios. These are in the Bibliothèque Nationale and in the collection of Edmond Lelon. An anonymous contemporary portrait showing Duvernoy seated in a relaxed attitude with a silver horn by L. J. Raoux is in the Opéra library (see HORN, fig.7).

GUSTAVE FERRARI/R

Duvosel, (Seraphien) Lieven (b Ghent, 14 Dec 1877; d Ghent, 20 April 1956). Belgian composer and conductor. He studied at the conservatories of Ghent and Antwerp (1890-1900) and at the Paris Conservatoire with Widor (organ), Lenepveu (counterpoint) and Fauré (composition). While he was in Paris (1904-5, 1907-8) his cantata *Vers la lumière* and several symphonic poems were performed. Returning to Ghent in 1909, he worked as a school music teacher and completed the first part of the *Lieve-cyclus*, his most important orchestral work. Subsequently he lived in Berlin (1918-20) and the Netherlands (1920-40, The Hague and Haarlem), where he conducted amateur choirs, orchestras and brass bands. In 1941 he went back to Belgium. His music is in a late Romantic style, distinguished by Flemish nationalist elements, emotional feeling and polyphonic skill in the choral writing, and impressionist orchestration.

CORNEEL MERTENS

Dux, Benedictus. See DUCIS, BENEDICTUS.

Dux, Claire (b Witkowicz, 2 Aug 1885; d Chicago, 8 Oct 1967). Polish soprano. She studied in Berlin and made her début in Cologne as Pamina in 1906. She

remained there for five years. From 1911 to 1918 she was a member of the Royal Opera, Berlin. In 1911 she sang in Britain for the first time, with Beecham at His Majesty's Theatre. In 1913 she was Covent Garden's first Sophie in *Der Rosenkavalier*, under Beecham. At that time in Berlin she sang all the leading lyrical roles in the German and Italian repertory. In 1921 she went to the USA, where she appeared frequently with the Chicago Civic Opera, also making concert tours all over the country. After a brief return to Germany she settled in Chicago and retired from the stage, but still sang occasionally in concerts. Dux's voice was a lyric soprano of the utmost purity, controlled by a firm technique, and capable of exquisite *pianissimo*. She was admired as an enchanting and artless actress, whose Sophie, Eva and Pamina were particularly distinguished. In later years her lieder singing was much praised, but on the evidence of her records her style in this field was not as faultless as in opera. Beecham said that her 1914 performance as Pamina at Drury Lane was 'the most exquisite exhibition of *bel canto* that London has heard for more than a generation' (*A Mingled Chime*, London, 1944).

ALAN BLYTH

Dux, comes (Lat., 'leader, follower'). Terms for the antecedent and consequent parts of a canon respectively, (see CANON (i)), apparently coined by Sethus Calvisius (*Melopoeta*, 1592) as translations of the Italian words 'guida' and 'consequente' used by Zarlino and Vicentino. Although the term 'comes' originally referred to the entire answering voice in a canon or fugue, it gradually acquired a narrower meaning. Especially with the growth of fugal form and the development of harmonically defined fugal themes, 'comes' came to designate only the beginning of the answering part, particularly if slight departures from the melodic shape of the 'dux', or theme, were made (the so-called tonal answer; see ANSWER). Because the answer in a tonal fugue is generally associated with dominant harmonies (most fugues beginning on the tonic), the term 'comes' was also associated with the dominant key, regardless of when it appeared. Thus the term was sometimes used to designate the opening of a fugue beginning on the dominant, in contradistinction to its original meaning; this usage was first pointed out by F. W. Marburg in his *Abhandlung von der Fuge* (1753).

See FUGUE, §2

Duyse, Flor [Florimond] van (b Ghent, 4 Aug 1843; d Ghent, 18 May 1910). Belgian musicologist and composer. The son of the poet Prudens van Duyse, he studied the violin from the age of seven. When he was ten he entered the Ghent Conservatory, where he was a pupil of Karel Miry; he won prizes in harmony (1859) and counterpoint (1861–2). His operetta *Teniers te Grimbergen*, on a libretto by his father, was produced in 1860 at the Minardtheater in Ghent, and several short vaudeville followed at the Nationaal Toneel in Antwerp; his *opéra comique Rosalinde* was also produced there in 1864. At about this time he entered the University of Ghent, where he took a degree in law in 1867. While continuing to compose (in 1873 he won second prize in the Belgian Prix de Rome with his cantata *Torquato Tasso's dood*), he made a career as a magistrate and as a musicologist. He played an important part in the cultural education of the working class by organizing evenings of singing, which were highly

successful. However, his greatest musical achievements lie in his researches into folksong, in which connection he did epoch-making work. His last monograph, *Het oude nederlandse lied* (1903–8), remains today the principal reference work on early Dutch song.

Dvarionas, Balys (b Liepāja, Latvia, 19 June 1904, d Vilnius, 23 Aug 1972). Lithuanian composer, pianist and conductor. He was a son of an instrument maker and younger brother of the soprano Julia Dvarionaitė (1893–1947) and of the choral director A. Dvarionas. In 1920 he completed his studies at the Leipzig and Berlin conservatories under Abendroth, Karg-Elert and Petri. He was then a piano teacher in Kaunas (1926–40) while working as a concert pianist throughout Europe. Thereafter he founded and conducted (1940–41, 1958–61) the Vilnius SO, and in 1947 he was appointed professor at the Lithuanian Conservatory. He received the Order of Lenin and the title People's Artist of the USSR in 1964. His major works were produced in the decade after World War II, when his melodious, folk based style conformed with the requirements of the new Lithuanian Soviet republic, whose national anthem he composed. His daughter Margarita Dvarionaitė (b Liepāja, 1928), who was educated at the Leningrad Conservatory, has been conductor of both the Lithuanian Opera and the Lithuanian PO.

Dvořák, Jiří (b Vamberk, eastern Bohemia, 8 June 1878). Czech composer and teacher. He studied at the Prague Conservatory (1943–7) and at the Prague Academy (1949–53), where his composition teachers were Řídský and Dobiáš. From 1953 he worked at the academy, at first as secretary to the composition department and then as lecturer in composition theory. The centre of his extensive and varied output is the chamber and instrumental music, which calls for new performing techniques. He has progressed from a romantic, folkloric style (as in the *Dubnové skizzy*, 'April sketches', for piano on a Moravian theme) to a dodecaphony that is only exceptionally atonal.

OLDŘICH PUKL

Dvořák, Antonín (Leopold) (b Nelahozeves, nr. Kralupy, 8 Sept 1841; d Prague, 1 May 1904) Czech composer. With Smetana and Janáček, he is regarded as one of the greatest composers of the nationalist movement in what is now Czechoslovakia. Of the three, he made the fullest reconciliation of a national idiom with that of the symphonic tradition, absorbing folk influences and finding effective ways of using them in orchestral, choral, chamber and (if less distinctively) operatic music. There was scarcely a medium he did not attempt; and throughout, his music is characterized by a remarkable fertility of invention coupled with an apparent, yet deceptive, ease and spontaneity of expression

1 Early years, 1841–73 2 From first recognition to international fame, 1873–84 3 Vintage years, 1884–92 4 The American period, 1892–5 5 Final years, 1895–1904 6 Teaching and character 7 Dvořák's style and its origins 8 Working methods 9 Operas 10 Choral works 11 Orchestral works 12 Chamber music 13 Piano music 14 Songs and duets

1 **EARLY YEARS, 1841–73.** The musical achievements of Dvořák's father, František, amounted to an ability to play the zither and compose a few simple dances. Antonín was first taught music by the village schoolmaster. Before long he was playing his violin at his father's inn, in neighbouring churches and in the village band. He left school shortly before his 12th birthday and rather reluctantly began to learn butchery, the trade of his father and grandfather. A year later he left home for Zlonice, a town in which he could learn German and which provided greater musical opportunities. It is not certain that he completed his apprenticeship; but he made good progress with his musical studies, especially under the guidance of Antonín Liehmann, the school German teacher who was also the church organist. Liehmann taught him the violin, viola, piano, organ and keyboard harmony. Eventually Liehmann's pleading and an uncle's offer of financial assistance combined to persuade František Dvořák to let his son risk taking up a musical career. Whatever future career he envisaged, František was certainly wise to send the boy to school at Česká Kamenice in northern Bohemia for a year in 1856 to learn German. There he continued his studies of harmony and the organ under the tutelage of Franz Hancke

In 1857 Dvořák entered the Prague Organ School, where he received the orthodox training of a church musician and had organ lessons from the principal, K. F. Pitsch. During his first year he also attended a nearby school in order to improve his German. Pitsch died in 1858 and was succeeded by Josef Krejčí, whose more modern interests extended to Mendelssohn and even Liszt. Dvořák had become a capable viola player, and was able to take part (without payment) in the St Cecilia Society concerts: their programmes included a number of contemporary works. He also played in the important golden jubilee celebrations of the Prague Conservatory, and when the Estates Theatre orchestra was augmented for performances of *Tannhäuser* and *Lohengrin*, and

possibly for Meyerbeer productions as well, he almost certainly played in it. No doubt he sometimes saved enough money to attend concerts when Liszt, Bülow or Clara Schumann appeared, but he could not afford to buy scores, and there was no piano at his lodgings, so his close friendship with Karel Bendl (a third-year student and a gifted conductor and composer) was very valuable to him; Bendl allowed him to study his large collection of scores and to have free access to his piano. When Dvořák graduated in 1859 he was awarded only the second prize, and told that he was excellent but less gifted in theory than in practical work.

Dvořák's first professional post on leaving the school was with a small band, directed by Karel Komzák (i), which played at restaurants and for balls and which, in 1862, during the great upsurge of national culture in Bohemia, became the nucleus of the new Provisional Theatre orchestra. For the next nine years Dvořák was principal violist in the orchestra, first under J. N. Maýr and from 1866 under Smetana; when Wagner conducted a programme of his own music in Prague early in February 1863, Dvořák had the experience of playing the overture to *Tannhäuser*, extracts from *Die Meistersinger* and *Die Walküre* and the prelude to *Tristan und Isolde*. His earliest serious compositions date from this period: some chamber music, two symphonies (1865), a cello concerto, and a song cycle inspired by his unrequited love for one of his pupils, Josefina Čermáková. He had probably begun teaching in the early 1860s; his pupils included Anna Čermáková – Josefina's younger sister, his future wife. He completed his first two operas, *Alfred and Kral u uhlíř* ('King and charcoal burner'), in 1870 and 1871, and was promised that the second, a comic opera on the Wagnerian model, would be staged at the theatre; but eventually it was declared to be 'too complicated' (Smetana had conducted the overture at a Philharmonic concert on 14 April 1872, when it was well received). At about the same time some songs and the slow movement of a piano trio were performed at the semi-private free musical evenings initiated by Ludevít Procházka; a few months later the Piano Quintet op.5 was played at a matinée. Since relinquishing his position at the theatre (1871) he had been able to devote more time to composition. But it was a struggle to make ends meet until early in 1873, when Jan Neff, a wealthy wholesale merchant, engaged him to accompany his own and his wife's singing and to teach the piano to their children. Dvořák relied on teaching as the main source of his income until at least 1878.

2. **FROM FIRST RECOGNITION TO INTERNATIONAL FAME, 1873–84.** Dvořák began to attract attention at the age of 31, when his patriotic cantata *Hymnus: Dědicové bílé hory* ('The heirs of the White Mountain') was performed on 9 March 1873 with striking success. Greatly encouraged, he set to work on a third symphony. A few months later *King and Charcoal Burner* was rejected; but the effect on him was salutary. It forced him to become severely self-critical, to the extent that he not only destroyed a considerable number of his early works, but in the summer of 1874 took the unusual step of resetting the libretto of the ill-fated opera using none of the original music. At the same time he was abandoning his former Wagnerian inclinations. In November 1873 he married Anna Čermáková, and three months later he became organist of St Adalbert's, Prague. It was

a useful experience to hear his Third Symphony performed at a Philharmonic concert on 29 March 1874, conducted by Smetana, though he had already completed his Fourth. His second setting of *King and Charcoal Burner* was produced on 24 November.

By July 1874 Dvořák had both enough confidence and enough new works to enter 15 compositions, including his two most recent symphonies, some overtures and the Songs from the Dvůr Králové Manuscript op. 7, for the Austrian State Stipendium, established to assist young, poor and talented artists. The adjudicators were Johann Herbeck (director of the Imperial Opera), Hanslick and Brahms, and Dvořák received the prize of 400 gulden. This gave him fresh encouragement: as well as some chamber music and other smaller works, he wrote a five-act grand opera, *Vanda* (rather over-ambitiously, in view of his lack of technical ability and experience), and the Symphony no. 5 in F major, which represents a great advance on anything he had previously written. He competed for the stipendium several more times, winning in 1876 and 1877.

From 1873 onwards a few of Dvořák's compositions were published, almost all of them by Stary of Prague; but the firm was small, and no large sales were expected. On 30 November 1877, Hanslick wrote to inform him that he had just won 600 gulden, and told him how interested Brahms was in his music. He then added:

The sympathy of an artist as important and famous as Brahms should not only be pleasant but also useful to you, and I think you should write to him and perhaps send him some of your music. He has kept the vocal duets [the Moravian Duets] in order to show them to his publisher and to recommend them to him. If you could provide a good German translation, he would certainly arrange for their publication. Perhaps you might send him a copy of these and some other manuscripts. After all, it would be advantageous for your things to become known beyond your narrow Czech fatherland, which in any case does not do much for you.

Brahms wrote to Simrock on 12 December and the direct result was that the publisher accepted the duets, commissioned the Slavonic Dances, and published both works in 1878. They were favourably reviewed by

Louis Ehlert in the Berlin *National-Zeitung* on 15 November that year. Simrock then went on to publish the three new Slavonic Rhapsodies, the Serenade for wind instruments, the String Sextet and String Quartet in E♭, two sets of songs, more Moravian Duets and other works, all within 12 months. Simultaneously Bote & Bock issued five of Dvořák's compositions, including the Theme and Variations for piano, the Serenade for strings and the Piano Trio in G minor.

With so much of Dvořák's music becoming available, foreign performances followed one another in rapid succession. Some of the Slavonic Dances were played at Hamburg and Nice in January 1879, and at the Crystal Palace on 15 February by August Manns. The Slavonic Rhapsody no. 2 was presented at Dresden on 3 September 1879, no. 3 had its world première in Berlin on 24 September, and no. 1 was performed at Baltimore on 21 February 1880. The Joachim Quartet, with Jacobsen and Dechert, gave the first performance of the Sextet in Berlin on 9 November 1879, and Bargheer played the E♭ String Quartet at Hamburg on 7 January 1880. The Serenade in D minor was presented at Breslau on 18 November 1879, and on 24 April 1880 at Hamburg, the G minor Piano Trio, the Serenade and the Romance in F minor for violin and orchestra appeared in a programme devoted to Dvořák's music. Performances of his music took place in many other cities, including Riga, Cincinnati and New York. Hans Richter was anxious to give the first performance of the Symphony no. 6 in D in Vienna, but anti-Czech feeling prevented this (Dvořák dedicated the work to him). Paul Klengel gave its first foreign performance at Leipzig on 14 February 1882, and on 22 April Manns conducted it at the Crystal Palace. However, as a result of this rapidly awakening interest in Dvořák's music, publishers and others began to make excessive demands on the composer. Simrock acquired first option on each new work he wrote, leaving Dvořák free to offer works not completely new to Bote & Bock or Schlesinger.

Programm
zur grossen Musikaufführung
unter persönlicher Leitung
von
Richard Wagner.
8. Februar 1863.

1. Eine Faustouvertüre.
2. a) *Versammlung der Meistersingerstadt.* (für Orchester allein) neu.
b) *Pugners Arie an die Versammlung,* gesungen von Herrn Rokitanetzky, neu.
3. *Vorspiel zu den „Meistersingern“*, neu.
4. *Vorspiel zu „Tristan und Isolde“.*
5. *Siegmonds Liebesnachtung,* (gesungen von Herrn Bernard) neu.
6. *Ouverture zu „Tannhäuser“.*

Die Herren Rokitanetzky und

Richarda Wagnera.
8. února 1863.

1. *Ouvertura k Faustu.*
2. a) *Shromáždění rechu mistrůvých pěvců,* (pro samý) nová
b) *Poguerova eslovani shromáždění,* nová, zpívá pan Rokitanetzky
3. *Předehra k „mistrům pěvcům,“ nová;*
4. *Předehra k „Tristanu a Isolde.“*
5. *Milestaj zpěv Siegmunda,* zpívá pan Bernard, nová.
6. *Ouvertura k „Tannhäuseru.“*

Vedoucí skladby Richarda Wagnera.

Pánové Rokitanetzky a Bernard přerazili s obzvláštní odvahou nadměrné dlohy

At no period of his life did Dvořák allow much time to elapse without searching for a new opera libretto, composing an opera or revising one he had already written. Thus two years after *Vanda* he completed the comic opera *Šelma sedlák* ('The cunning peasant' is a more appropriate title than the customary translation 'The peasant a rogue'); and after another five years, now with a great deal more experience, he wrote a relatively successful grand opera in four acts, *Dimitrij*. By now the Prague productions of his operas were arousing interest abroad, especially those of *The Cunning Peasant* and an earlier one-act comedy, *Tvrď palice* ('The stubborn lovers', or 'The pigheaded peasants'), both published by Simrock in 1882. The confidence of Schuch (conductor of the Dresden Opera) in the former was justified by a highly successful performance at Dresden on 24 October 1882, while a Hamburg production followed on 3 January 1883. At about this time too, Baron Hoffmann, the Generalintendant of the Vienna Imperial Opera, was trying to tempt Dvořák with a German libretto; but the composer was in no hurry to decide whether he, a Czech, would be justified in making use of one.

Brahms was the chief agent of Dvořák's success. He interested Joachim in Dvořák's music and arranged for Dvořák to visit Jauner, the director of the Imperial Opera; and his contacts with Hellmesberger (the solo violinist of the Imperial Opera) very probably led the latter to commission the String Quartet in C op.61. Brahms and Hanslick were both firmly convinced that it would be wise for Dvořák to move away from 'provincial Prague' to a musical centre such as Vienna, with its powerful musical tradition. As Hanslick expressed it in a letter of 11 June 1882: 'After such great initial successes, your art requires a wider horizon, a German environment, a bigger, non-Czech public'. While Dvořák was extremely grateful for his friends' assistance, he was acutely aware of the way his people had suffered under the Habsburgs, and of the continuing animosity and condescension of German-speaking people towards the Czech nation; and he found it difficult to accept the well-intentioned advice of his friends when it took this form.

The first performance of Dvořák's *Stabat mater* did not take place until 23 December 1880, three years after its completion. It was published the following year and performed by Janáček at Brno and Bellowitz at Budapest in April 1882. When Barnby presented it in London on 10 March 1883 it was given an enthusiastic welcome, which may well have contributed to the Philharmonic Society's subsequent decision to invite the composer to London to conduct some of his own music. This was Dvořák's first opportunity to conduct outside Bohemia. He had received great ovations when Richter introduced the Slavonic Rhapsody no.3 in Vienna and when *The Cunning Peasant* was performed at Dresden, but the London welcome was even warmer. At his three public appearances in March 1884 he conducted first the *Stabat mater* at the Royal Albert Hall, then his Hussite Overture, Slavonic Rhapsody no.2 and Sixth Symphony at St James's Hall, and finally his *Scherzo capriccioso* op.66 and Nocturne for strings op.40 at the Crystal Palace, where he also appeared as accompanist in two of his *Cigánské melodie* ('Gypsy melodies'). He was immediately invited to conduct the *Stabat mater* and the same symphony at the Three Choirs Festival at Worcester, and to write large choral works for the

2 Antonín Dvořák photograph, c1877–8

Birmingham and Leeds festivals and a new symphony for the Philharmonic Society. The prospect of a period with no financial worries made him decide to buy a cottage and some land at Vysoká, near Píbram – a welcome country retreat in which he could compose in peace.

3 VINTAGE YEARS, 1884–92 During the years 1884–6 preparations for visits to England were uppermost in Dvořák's mind. Towards the end of 1884 he travelled to Berlin to conduct the Berlin PO in a concert that included his Piano Concerto, played by Anna Grosser-Rilke, and the Hussite Overture, shortly afterwards Hans von Bülow, who was to become an enthusiast for this overture and for the Seventh Symphony, brought the Meiningen Orchestra to Prague, and invited Dvořák to conduct the overture *Domov můj* ('My home'). The English commissions constituted a major challenge to Dvořák, and one he was prepared to face. While working on the dramatic cantata *Svatební košile* (literally 'The wedding shift' but always known as 'The spectre's bride') for Birmingham, he grew convinced that this was his finest work; and turning to his Symphony no.7 in D minor, which he was composing for the Philharmonic Society, he resolved to make it, with God's help, 'a work which would shake the world'.

It has been suggested that the symphony owes its particular noble qualities to its having been written during a period of considerable crisis. Baron Hoffmann was attempting to persuade Dvořák to write a German opera for Vienna. Having already won international fame with his orchestral, choral and chamber music, Dvořák was keen to attempt to match these achievements in the theatre. He wanted the Vienna Opera to take one of his Czech operas, but the management turned down both *The Cunning Peasant* and *Dimitrij*.

The rejection of *Dimitrij* deeply wounded him, for it had been a success in Prague, and its Russo-Polish subject seemed suitable for Vienna; but he was told that the Viennese were 'rather tired of big five-act tragedies'. The main reason for Dvořák's reluctance to comply with the baron's wishes was his feeling that to do so would be to betray his fellow Czechs. Ironically, the Imperial Opera finally revoked the decision on *The Cunning Peasant* and staged it on 19 November 1885 – but at a time of intense political tension, so that there was no enthusiasm for the production and the performance was a fiasco.

With his next three visits to England Dvořák added to his reputation as one of the most important contemporary composers. The English première of *The Spectre's Bride* at Birmingham was notable for the audience's enthusiasm; and on his fifth visit the first performance of the oratorio *Svatá Ludmila* ('St Ludmilla') at Leeds on 15 October 1886 provided another triumph. However, audiences were smaller when Dvořák conducted the work at St James's Hall and the Crystal Palace in the following weeks, and provincial choral societies were discouraged from taking it up. Nevertheless, Dvořák's choral music was proving more welcome in England than anywhere else.

During this period some friction began to develop between the composer and his publisher. The first disagreement concerned the price to be paid for the Seventh Symphony; there followed an argument over Simrock's insistence on printing the titles of the works and Dvořák's first name in German. The composer demanded that the titles should be in both Czech and German and that his name should appear as 'Ant', which would serve as an abbreviation for either the Czech 'Antonín' or the German 'Anton', and Simrock, failing to understand how sensitive the composer was on this issue, eventually provoked Dvořák into writing on 10 September 1885:

Your last letter, in which you launched forth into national political explanations, amused me greatly, but I am sorry you are so badly informed. All our enemies speak like that, or rather, some individual journalists are obliged to write like that, in accordance with the policy and tendencies of this or that political newspaper. But *what have we two to do with politics*? let us be glad that we can *dedicate our services solely to the beautiful art!* And let us hope that nations who represent and possess art will never perish, even though they may be small. Forgive me for this, but I just wanted to tell you that an artist too has a fatherland in which he must also have a firm faith and which he must love.

For a long time Simrock had been urging Dvořák to give him a second set of Slavonic Dances; but while the composer's mind was set on large-scale works, this was out of the question. A new chance came in the summer of 1886, while Dvořák was in a relaxed mood. When František Ondříček played the Violin Concerto with the Vienna PO at a Slavonic Singers' Union jubilee concert, Dvořák went there to conduct. At about this time, too, he began looking through earlier works and revising some of them to help meet the demands being made on him. It occurred to him that Richter might be interested in his Symphonic Variations, which had lain unperformed for ten years. He was right: Richter was delighted with this forgotten work, and after introducing it at a London concert on 16 May 1887 he was able to report that in his entire conducting experience no other new work had been so successful. Three months later Dvořák began work on the Piano Quintet in A op.81, and before the end of the year he was engaged on another opera, *Jakobín* ('The Jacobin'), which was not finished until a year later.

Dvořák was invited to conduct the *Stabat mater* in Budapest in March 1888, and the Fifth Symphony at Dresden a year later. In 1889 he was twice asked to join the professorial staff of the Prague Conservatory, then directed by Antonín Bennewitz; but he was not prepared to commit himself to teaching at the time, and did not accept until two years later. In June he was awarded the Order of the Iron Crown (from Austria), and a few months later he was received in audience by the emperor. He launched the Eighth Symphony in Prague on 2 February 1890.

Dvořák's visit to Russia in March 1890 was a result of his friendship with Tchaikovsky, formed during Tchaikovsky's stay in Prague in February 1888 and renewed upon his return in November. Tchaikovsky invited Dvořák to Russia on the second visit but had to wait a few weeks for a firm reply: he was delighted when Dvořák accepted but was away on a foreign tour during the whole of Dvořák's visit. In Moscow on 11 March 1890 Dvořák conducted a programme comprising his Fifth Symphony, the Adagio from the Serenade in D minor, the *Scherzo capriccioso*, Slavonic Rhapsody no.1 and the Symphonic Variations. Having had virtually no previous opportunity of hearing any of Dvořák's music, and being faced with works completely new to them (apart from the Rhapsody), many Russians left before the concert was over, and the critics were lukewarm; it was left to the Czech and German communities to lend their support. The arrangements at the Russian Musical Society concert at St Petersburg on 22 March were rather better on this occasion Dvořák presented only two works, the Symphony no.6 and, again, the *Scherzo capriccioso*.

On his return home Dvořák was elected a member of the Czech Academy of Sciences and Arts. A few days later he left for London to introduce his Eighth Symphony at the Philharmonic Society concert (24 April 1890). During most of that year he was fully occupied with a Requiem Mass commissioned by the Birmingham Festival. There were further disagreements with Simrock, who was reluctant to offer sufficient remuneration for the new symphony, arguing that only small works made a profit; he was also very dilatory over deciding to take the small Mass in D. Since the dispute was not resolved by October, Dvořák severed his relations with Simrock and later sold both works to Novello. In November 1890 he was in Frankfurt am Main conducting the Eighth Symphony and the Hussite Overture. Two months later he began giving composition classes at the Conservatory, his pupils including Josef Suk (i) and Oskar Nedbal. In March 1891 Prague University conferred on him an honorary PhD, and in June he went to Cambridge to receive an honorary MusD. On 15 June, the day before the ceremony, he conducted the Symphony no.8 and the *Stabat mater*, and Albani sang 'Where art thou, father dear?' from *The Spectre's Bride*. Dvořák's 50th birthday was celebrated in Prague, but he preferred to remain quietly at Vysoká. A month later, on 9 October, he conducted the première of his Requiem at Birmingham, where it made a much more lasting impression than *St Ludmilla* had done at Leeds.

In June 1891 Dvořák was invited by Mrs Jeannette Thurber to take up the directorship of the National Conservatory of Music, New York, at a salary of \$15,000 a year. Although he found the idea attractive, he needed to make sure that the conditions were satisfac-

tory, and so the negotiations were not completed or the contract signed until December. The agreement was for him to take the post for two years from 1 October 1892. For five months at the beginning of that year Dvořák spent much of the time on a farewell tour of Bohemia and Moravia with the violinist Ferdinand Lachner and the cellist Hanuš Wihan, playing his new *Dumky* Trio at 40 concerts. At a special farewell concert in Prague on 28 April he conducted the première of his recently completed cycle of three overtures opp.91 3: *V přírodě* ('In nature's realm'), *Karneval* and *Othello*. At the time of the International Exhibition in Vienna, the National Theatre

to the most talented students three mornings a week, and on the other three mornings to conduct the choir and orchestra, and be available if necessary for business consultations with Mrs Thurber. During the first winter he conducted his *Te Deum*, Triple Overture, Symphony no.6 and Hussite Overture in New York and the Requiem at Boston, and between January and May 1893 he composed the Symphony no.9 in E minor, *Z Nového světa* ('From the New World'). Being keenly interested in the music of black Americans, Dvořák seized the opportunity of inviting a gifted black singer to sing spirituals to him. This was Harry T. Burleigh, a student at the National Conservatory, but not one of his own pupils.

Dvořák spent his summer holiday with his family at Spillville, a Czech community in north-east Iowa; during his stay there he composed his String Quartet in F and String Quintet in E \flat , each known as 'The American'. He went to Chicago for the World Exhibition, and on its 'Czech Day', 12 August, he conducted the Symphony no.8, three Slavonic Dances from the op.72 set and *My Home*. He was invited to Omaha by Edward Rosewater, an American Czech newspaper proprietor, who arranged a banquet for him at the beginning of September. From there he went to St Paul to see Pastor P. J. Rynda, a Moravian, and was given another banquet by the Czechs of that city. On the return journey to New York he stopped at Buffalo and Niagara Falls. Towards the end of the year relations were resumed with Simrock, who was then able to publish the Ninth Symphony, the cycle of three overtures opp.91-3, the 'American' Quartet and Quintet and the Violin Sonatina in 1894. The Sonatina, his op.100, was dedicated to his six children. Publication was speeded up when Brahms generously offered to correct the proofs, a gesture of friendship for which Dvořák was deeply grateful. The Symphony 'From the New World' was first presented (to an eager and very enthusiastic audience) by Dvořák's friend Anton Seidl at Carnegie Hall, New York, on 16 December 1893, and the Kneisel Quartet gave the premières of the Quartet in F at Boston on 1 January and the new Quintet in New York on 12 January.

For nearly a year Mrs Thurber had been urging Dvořák to sign a new contract to take effect after their current agreement expired in May 1894. He was in no hurry to do so, apart from having fits of nostalgia, he was seriously worried about the financial position. As a result of the panic of 1893, Mrs Thurber's husband, formerly a millionaire, was on the verge of bankruptcy, and consequently she was well in arrears with Dvořák's salary. However, after receiving a promissory note, he signed a two-year contract on 28 April 1894. He returned to Bohemia for the summer, and spent a quiet and happy time at his beloved country retreat. Although Mrs Thurber did not fully honour her promise, he left home in time to resume his duties as director of the National Conservatory on 1 November.

For some considerable time Dvořák had composed comparatively little, his two most significant works being the Violin Sonatina and the *Biblické písně* ('Biblical songs'). In April and July 1894 he revised Acts 2 and 4 of *Dimitrij*, making them in the process rather more Wagnerian, a result of his renewed interest in Wagner following discussions with Seidl. On returning to the conservatory for his third year (which in the event lasted only six months) he settled down to writing

3 Hanuš Wihan, Dvořák, and Ferdinand Lachner, who toured together between January and May 1892 playing the 'Dumky' Trio

company used the opportunity of visiting the city to present two works in Czech which had never been performed there. On 1 June 1892 they performed *The Bartered Bride* and on the following day *Dimitrij*, the work the Imperial Opera had rejected eight years earlier.

4 THE AMERICAN PERIOD, 1892-5 Dvořák's arrival in New York was timed to coincide with the celebrations commemorating the fourth centenary of the discovery of America. Since Rodman Drake's poem *The American Flag* failed to reach him in time, he wrote instead a *Te Deum* for the musical programme before leaving home. Mrs Thurber's aim in inviting him was twofold: she expected him to found an American school of composition; and she wanted a figurehead, rather than an administrator, for her conservatory. She was also keen for Dvořák to write an American opera on the subject of Hiawatha, but the project never advanced beyond a few preliminary sketches. Her conservatory was run on philanthropic lines, and she controlled the finances; Dvořák was expected to teach composition and instrumentation

the Cello Concerto in B minor. He finished it three months later, just before he heard that he had been made an honorary member of the Gesellschaft der Musikfreunde in Vienna. In the summer he felt compelled to replace the brilliant closing bars with a long contemplative coda, reintroducing a reminiscence of his song 'Leave me alone', which had already been worked into the Andante; he had just attended Josefina Čermáková's funeral and this song was a favourite of hers. He dedicated the work to Wihan.

After consultation with several of his more influential friends, including Tragy, director of the Prague Conservatory, Dvořák wrote to Mrs Thurber on 17 August 1895 to say that he regretted very much that it was impossible to return to New York for the agreed eight months in 1895–6. He gave several family reasons for this decision, and refrained from making any reference to the overdue portion of his salary. He evidently felt that he was no longer bound by the terms of his contract since Mrs Thurber had found it impossible to keep her part of the bargain. Six months later he returned to the Prague Conservatory to resume his duties as professor of composition.

5 FINAL YEARS. 1895–1904. In the best of humours, surrounded by his family again, near to his friends and permanently established in the country he loved, Dvořák settled down to writing two string quartets, in G and A♭, finishing the second on 30 December 1895

Next he explored some unfamiliar musical territory, the symphonic poem, and from K. J. Erben's *Kytice z pověstí národních* ('A bouquet of folk tales'), the source of *The Spectre's Bride*, he chose four more ballads: *Vodník* ('The water goblin'), *Polednice* ('The noon witch'), *Zlatý kolovrat* ('The golden spinning-wheel') and *Holoubek* ('The wild dove'); working simultaneously on the first three, he finished them in four months. After they had been privately performed at the Prague Conservatory (3 June) he made a few alterations. Immediately they had been published Richter and Henry Wood performed them in London during October and November of the same year. By that time Dvořák was already working on *The Wild Dove*.

Dvořák visited London for the last time for the world première of the Cello Concerto, which Leo Stern played at the Philharmonic Society concert on 19 March 1896. In Vienna a few days later he visited the aging Brahms, who was most concerned about the necessity to counteract Bruckner's growing influence at the conservatory. He tried hard to persuade Dvořák to move to Vienna with his family, and even offered to place his entire fortune at his friend's disposal to make this possible. Dvořák saw him only once more, on his deathbed.

In 1897 Dvořák made extensive revisions to *The Jacobin* and composed another symphonic poem, *Píseň bohatýrská* ('Heroic song'), which has no programme. The first performance was given in Vienna by Mahler on 4 December 1898. At the end of 1897 Dvořák was

4. Autograph score of part of the first movement of Dvořák's Symphony no.9 ('From the New World'), composed 10 January–24 May 1893

appointed a judge for the Austrian State Prize. On his silver wedding day his daughter Oulie married his pupil Josef Suk. For the rest of his life, opera was his principal concern: as soon as he completed one, he began looking for a libretto for the next. *Čert a Káča* ('Kate and the Devil'), a comic opera based on an old Czech fairy tale, was followed by *Rusalka*, a tragic fairy-tale opera treated on broad symphonic lines and based on a subject derived from Hans Andersen's *Little Mermaid*, Fouqué's *Undine* and other sources. It was performed at the National Theatre on 31 March 1901 and was extremely successful: at last the composer was satisfied that he had written a stage work which had won the hearts of his countrymen. Mahler planned to present *Rusalka* in Vienna in 1902 and in May that year Dvořák signed the contract, but something went wrong, the opera was not performed there until 1910.

During these last years recognition and honours came to Dvořák from all sides. At the emperor's jubilee celebrations he was awarded a large gold medal 'per litteris et artibus', an honour that had previously been conferred on only one musician, Brahms. He was elected a member of the Austro-Hungarian House of Peers, but attended only one session. On 6 July 1901 he became the director of the Prague Conservatory, though he had no administrative duties. To commemorate his 60th birthday the National Theatre mounted a cycle of his operas and a stage version of *St Ludmilla*, and the Umělecká Beseda (Artistic Society) arranged a series of musical programmes and a banquet.

Still fascinated by opera, Dvořák spent the 17 months to August 1903 working on the well-tryed subject of *Armida*. Probably in choosing this subject he was consciously making a bid for success on the international stage. It was a great blow to him that this last of his operas proved a failure, even though an inadequate production was partly to blame. During the first performance on 25 March 1904, he was forced to leave early because of a pain in his side. He was ill for five weeks and died on 1 May. He was given a national funeral and was buried at the Vyšehrad cemetery, where the nation's leading men are laid to rest.

6 TEACHING AND CHARACTER. Dvořák's teaching was empirical rather than systematic, and included frequent references to the works of his great predecessors by way of illustration. Josef Suk, Vítězslav Novák (who later established himself as his country's most gifted teacher of composition) and Oskar Nedbal (who conducted Dvořák's music at home and abroad) were his most talented composition pupils at the Prague Conservatory; his American pupils were much less distinguished. He encouraged them to develop a personal style, and only in their earliest music, and in the early music of Dvořák's friend Janáček, is it possible to see a close relationship with that of their teacher and friend.

While Dvořák did not identify himself with any patriotic or political group or faction, his Czech nationality was of great importance to him, and he was deeply hurt by disparaging remarks about his fellow countrymen. In his business dealings he showed both loyalty and trust, but also on occasions extreme caution, as in the lengthy negotiations leading to his first American contract, and his apparent suspicion about a successful outcome if *Rusalka* were staged in Vienna.

Dvořák was essentially a family man; his separation from his children during the American period was a

18th Feb 1896

My dear friend, Sergei

I am sorry to announce you
that I cannot conduct
the piece of the
Cello concerto, I am
I have promised my
friend Wiham - he will
play it.

If you just be content to
include the program of
come at all, and will be glad
to come another time.

With kindest regards
sincerely yours
Anton Dvořák

5 Autograph letter (14 February 1896) from Dvořák to the secretary of the Philharmonic Society, London, objecting to Leo Stern being engaged to perform the world première of his Cello Concerto

cause of his nostalgia. He loved wandering in the woods and forests of his native land, and enjoyed meeting Vysoká peasants, Příbram miners and expatriate Czechs at Spillville. He bred pigeons, welcomed a game of *darda* (a card game) and took a keen interest in train spotting. He retained the simple tastes that came naturally to a man of peasant origin, and held firmly to his unquestioning religious faith. His modesty when experiencing outstanding triumphs abroad provoked comment, and he made no pretensions to be other than 'a simple Czech musician'.

7 DVOŘÁK'S STYLE AND ITS ORIGINS. As a musician Dvořák was neither a conservative nor a radical. He combined a profound admiration for the Classical composers with a keen interest in contemporary musical developments and succeeded in writing music that appealed equally to people with strong leanings towards tradition and to those who welcomed change. His music displays a number of influences: folk music, mainly Czech but also American; earlier composers whom he particularly admired, notably Mozart, Haydn, Beethoven and Schubert; Wagner; and his close friend Brahms.

Nationalist feelings first stirred in Bohemia shortly after the French Revolution, but no strong political movement developed until the revolutions of 1830 and 1848. Smetana was the first to channel these nationalist

aspirations into music, and he alone was responsible for establishing a broadly based Czech musical style, which embraced far more than the basic elements of Czech art music and folksong but did not rely on specific folk-songs. He accomplished this in his first four operas, years before Dvořák's music became strongly national in colour. Dvořák absorbed some of the essence of Smetana's style but made no attempt to imitate its characteristic personal traits. He seems to have developed a national style without a conscious effort. It flowered in 1878, the year of the Serenade for wind, the Sextet op.48 and the Slavonic Dances and Rhapsodies. Czech dance rhythms appeared more frequently in his music, and some of his scherzos – for example that of the Sixth Symphony – became *furianty*. Certain slow movements took on the character of a melancholy *dumka*, for example those of the String Quartet in E \flat op.51, the Piano Quintet op.81 and the String Sextet, in which the slow movement is presented in polka rhythm (see ex 1)

Ex.1 String Sextet op.48
Poco allegretto

Dvořák's marked preference for trochaic and dactylic (rather than iambic and anapaestic) metres can be clearly seen even in his earliest compositions, particularly the String Quartet op.2. The stress given to the initial syllable of a word or phrase in Czech speech provides justification for this, but it seems likelier that he developed it subconsciously from Czech folksong.

Dvořák also absorbed a number of characteristic melodic elements of native folksong into his musical thinking. One of these, the immediate repetition of an initial bar or figure before the normal continuation of

the phrase, occurs in works from the whole of his creative life. There are two examples in the Adagio molto of the Third Symphony and another in the finale. The theme for variations in the String Quintet op.97 illustrates this practice splendidly, and there are more familiar examples among the subsidiary themes of the first movement of the Eighth Symphony, in the 'nature theme' of the three overtures opp.91–3 and in the Largo and finale of the Ninth Symphony (the second theme in each case). The motif of an initial upward leap, followed either by a leap back to the first note, as in the Slavonic Dance no.3 (the theme of which was borrowed from an authentic dance-song) and the *dumka* of the String Quartet op.51, or by a gradual descent towards the first note, as in the A major theme of the Slavonic Dance no.1 and the main theme of the Piano Quintet op.81, almost certainly emanated from folk sources. The traditional lullaby *Hajej, můj andělku*, used by Smetana in *The Kiss*, is an example of the first type, *Sil jsem prosa*, a very well-known folksong twice used for variations by Smetana, is an example of the second. Dvořák used only for a limited period the so-called 'Three blind mice' figure of three descending notes, a common feature of west Slavonic folksong, it is extremely prominent in the Symphony no.8. He also made infrequent but effective use of the Lydian (augmented) 4th, which he sometimes associated with the Czech *dudy* or bagpipes, and, like Schubert, he occasionally suggested the sound of the cimbalom.

Dvořák was less audacious in his harmony than Smetana, but he showed an interest in dissonance, which he employed to produce an effect of considerable power towards the end of the Ninth Symphony (see ex 2). He

Ex.2 Symphony no.9 op.95 4th movt. final section

did not roam from key to key, as Smetana and Wagner often did, tonality in his works thus tends to be fairly stable. He regarded modulation as a way of leading towards fresh colouring and did not, like Schubert, see it as serving the additional function of providing colour *per se*. He occasionally used a Moravian modulation, leading from a minor key to the major key a whole step lower. The influence of Smetana is evident in the structure of the opening of the 'American' Quartet and the fortississimo grandioso chords in C which form the climax of the Adagio in the Quartet op.106, both of which were suggested by similar passages in Smetana's String Quartet *Z mého života*.

It is impossible to gauge precisely the extent of American influence on the works Dvořák wrote in the USA. He had written pentatonic themes and used flattened 7ths in minor keys before he went there, and he was already familiar with Scotch snaps and the type of syncopation found in the spirituals of black Americans, since both of these elements occur in Slovak and Hungarian folk music. He partly foreshadowed the syncopated main theme of the first movement of the 'American' Quartet as early as 1886 in his Slavonic

Dance no.9. Furthermore, the persistent dotted rhythm both of the first movement of the String Quintet op.97 and of the finale of the Violin Sonata, both of which might be thought to have had an American Indian origin, occurred four years earlier in the Piano Quartet op.87. Yet, pentatonic themes and flattened 7ths are indeed more common in the music Dvořák wrote during his first two years in the USA, and the thematic material now is sometimes more 'primitive'. With regard to Indian music, which Dvořák heard at Spillville, it is known only that he used the melodic outline but not the rhythm of a two-bar fragment of it in the op.97 Quintet. Occasionally, as in the Largo of the Ninth Symphony and in the *Biblical Songs*, his recollection of spirituals affected what he wrote. But by the time he reached the Cello Concerto (1894-5) he appears to have tired of these exotic elements, which in any case were never more than tendencies; much of what he wrote during his years in the USA is either Czech or personal, as is clearly shown by his own continuation of a fragment of *Swing low, sweet chariot* in the G major theme in the Ninth Symphony. Nevertheless he seems not to have dismissed American influence entirely after returning home, for the element of pentatonicism and a cadence avoiding the leading note which appear in *Armida* may well owe something to it.

Unlike Smetana, Dvořák very rarely borrowed from folk music. The main theme of his Slavonic Dance no.7 grew out of borrowing from two or more separate tunes (see ex.3). He tended to take only fragments of folk-

Slavonic Dances nos.11 and 13 he altered the character of the borrowed material by presenting it in the minor mode, in the former case in a modified tempo and with poignant chromaticism added (see ex.4).

Ex.4

(a) *Pod dubem, za dubem*

(b) Slavonic Dance op.72 no.3

It is well known that Dvořák had a profound admiration for Mozart, whom he described as 'sunshine' and whose work he compared to a Raphael madonna he saw in London; both were 'so beautifully composed'. He venerated Beethoven when a Beethoven sonata was being played in a class he was taking, he shouted to his pupils, 'Why don't you all kneel!' He owned some of Haydn's string quartets. He felt a close affinity with Schubert (about whom he wrote a long and appreciative article for the *Century Illustrated Monthly* when he was in New York), and like him he delighted in changes from major to minor and vice versa. His love for these four composers, allied to the strong Classical tradition in Prague, made chamber music and the symphony natural outlets for his early music. There is a tendency to diffuseness in his early works, among which the 50-minute Cello Concerto in A is undoubtedly the least satisfactory, he probably realized this, as he did not orchestrate it.

When Dvořák succumbed to the powerful influence of Wagner he wrote amorphous string quartets, and an opera which could not be performed. He soon recognized his mistake and returned to a Classical style, but Wagner always remained a potent influence. Some passages can almost be regarded as direct borrowings from Wagner: the main theme of the Andante sostenuto of the Fourth Symphony opens with an obvious reminiscence of part of the Pilgrims' March in *Tannhäuser*; there are reminders of *Tannhäuser* and *Parsifal* in *Armida*, an echo of the Venusberg music in *Carnival* and a derivative of the 'magic sleep' motif in *Othello*. The Wagnerian character of one motif in *Rusalka* (ex.5) is unmistakable, but Dvořák wrote this kind of harmonic progression only rarely; normally his harmony was not influenced by Wagner. He came round full circle to Wagnerian methods late in his career, by which time he was well equipped to use them successfully. The revision of *Dimitry* (1894-5) meant the loss (which he regretted) of some lyrical passages from the earlier version, but the die was cast, and the revisions of *The Jacobin* (1897) followed similar lines. He retained a good deal of lyricism and relied on the spirit of the dance in his last three operas, but he also wrote declamatory vocal lines more often, and in *Rusalka* and *Armida* he used leit-motifs fairly consistently and treated them symphonically.

Allegro assai

tunes, as, for example, in the *Maličkosti* ('Bagatelles'), where he used the third and fourth bars of *Hrály dudy*, and in the Slavonic Dance no.11, where he used bars 9-12 of *Pod dubem, za dubem* (see ex.4). In the

Other composers who influenced Dvořák at different times include Berlioz, Schumann, Chopin, Mendelssohn, Liszt, Weber, Lortzing, Verdi and, above all, Brahms. The influence of Brahms can be observed in the style of the piano writing in the Violin Sonata and in a more general way in the D major symphony (no.6),

Ex 5 *Rusalka* op.114

Andante sostenuto

the first and last movements of which were affected by Brahms's symphony in the same key. Although Dvořák lacked Brahms's natural inclination for contrapuntal thought, he found little difficulty in writing counterpoint. His textures, however, commonly result from a combination of lines and figures, which have distinctive characters of their own, and he frequently wrote striking counter-melodies that have a contrapuntal function. As an experienced viola player he appreciated the necessity in chamber music and the wisdom in orchestral works of providing every part, however minor, with an intrinsic interest of its own. Brahms's integrity and seriousness of purpose appear to have given him valuable moral support when he was engaged on his two most ambitious works of 1883–5, the Piano Trio op.65 and the Seventh Symphony, both of which display a greatly increased mastery of dynamic and symphonic form. Brahms's influence can also perhaps be detected in the skilful, restrained reference to the first movement in the revised coda of the finale of the Cello Concerto. As the Adagio of this work suggests, Dvořák was inclined to linger over a beautiful slow movement, reluctant to draw it to a close, but the concerto is on the whole superbly assured and demonstrates in innumerable ways his mastery of symphonic form.

8. WORKING METHODS Although many of Dvořák's sketches are lost, enough have survived to provide a valuable insight into his creative processes. He generally showed both starting and finishing dates on his sketches as well as on his scores. Using one or two staves, he normally made an extended sketch of an entire work before beginning to prepare the full score. He also made preliminary and supplementary sketches; in the former he drafted or moulded a theme, and in the latter he corrected or reshaped a passage with which he was dissatisfied. The first sketch for the first theme of the finale of the Eighth Symphony was very different from the definitive version, which emerged only with the seventh sketch and needed two more for its completion. Besides using his American sketchbooks for extended sketches, he jotted down in them many other musical ideas as they occurred to him, most of them in a rather rudimentary state. Numerous themes that went into the American works can be found here, as can the *Rusalka*

motif, which he did not need to use for several years; there are others that he did not use at all. The earliest version of the motto theme of the Ninth Symphony was rather stiff and in F major, not the eventual E minor.

The continuous, extended sketches reveal the way Dvořák shaped and reshaped his movements. Extensive deletions show his dissatisfaction with much of what he had sketched. The Seventh Symphony, for example, caused him a great deal of trouble, and he rejected whole pages of early drafts; the scherzo was originally in 3/4 time, not 6/4, indicating that he conceived it as a *furiant*. He sketched the Largo of the Ninth Symphony in C, but later noticed that a series of chords with which he had been experimenting could be used to modulate from E, the tonic of the first movement, to D \flat , the key of his earliest sketch of the english horn melody; he therefore used the chords as a bridge and rewrote the slow movement in D \flat , an unusual choice of key. He had sketched and scored his Piano Trio in F minor by 31 March 1883, but a comparison with the published version reveals so many differences that it is apparent that he felt the need to revise it completely before he could allow it to be published. Other works came more easily and spontaneously than these. He always had plenty of ideas, though some of them needed polishing, and as a rule he worked relatively quickly. Although he did not find composition a straightforward matter, he had, like Schubert, the enviable gift of making his music sound as if it came naturally to him.

9. OPERAS Dvořák's interest in opera was aroused during his student days and was further stimulated by his participation in performances of the Italian, French, German and the few Czech operas that were in the repertory during his nine-year membership of the Provisional Theatre orchestra. When he resigned from it he was already working on his second opera. His interest in, and appreciation of, opera increased over the years, but because he lacked a natural instinct for drama it was hardly possible for him to portray characters convincingly and handle dramatic situations effectively until he had achieved, through his instrumental music, sufficient mastery in conveying a broad and comprehensive range of mood, expression and emotion. Lyric rather than dramatic elements are thus generally more prominent in his operas. He was never able entirely to overcome his innate handicap, and it is primarily for this reason that, despite their admirable qualities and the great affection in which *Rusalka* is held in Czechoslovakia, his last five operas rank lower than his finest orchestral and chamber works.

Even though there is no spoken dialogue in any of Dvořák's comic operas, he did not often resort to recitative. In most of his operas the music is continuous, although in those of the 1870s the division into numbers is obvious enough, and even in the late works there are some important set pieces. In his first two operas he attempted to follow closely in Wagner's footsteps but then moved sharply in the direction of Weber and Lortzing, only to return, with greater success, to Wagnerian methods when revising *Dimotrij* and *The Jacobin* and composing his last three operas. It was normal for him to employ a limited number of reminiscence themes in his work; in *Rusalka* and *Armida* they can be more accurately described as leitmotifs. He often showed the influence of Smetana, who initiated what is acknowledged as the modern Czech musical style. But

7 Autograph sketch of the beginning of Dvořák's Eighth Symphony, composed 26 August–8 November 1889

Dvořák, Antonín, §9: Operas

with *Libuše* (composed 1869–72, performed 1881) Smetana achieved his self-imposed task of providing the Czech nation with the most strongly national of all their operas, after which Dvořák understandably felt an obligation to do no more than select Czech or Slavonic subjects and compose music that inevitably possessed a Czech flavour. In his later years he was careful, but not always wise, in his choice of librettos, and the necessity for substantial alterations to a work became clear to him only after it had been performed. With experience he was able to respond to the emotional and dramatic demands of a libretto, but his instinctive tendency to create a rounded piece of music characterized by development of a symphonic nature seems to indicate clearly that he was primarily a composer of instrumental music.

When Dvořák wrote his first two operas, Smetana's *The Brandenburgers in Bohemia*, *The Bartered Bride* and *Dalibor* had already been performed in Prague, as had operas by several lesser native composers, including František Škroup, Šebor, Bendl, Skuherský and Rozkošný, but none of these served as a real precedent

for him. Notwithstanding the claims of contemporary critics, *Dalibor* contains scarcely a hint of Wagnerian tendencies. So Dvořák's *Alfred* (1870) and the earliest version of *King and Charcoal Burner* (1871) are the earliest attempts by a Czech composer to write operas in accordance with Wagner's principles. Neither was performed at the time, and they do little more than show his keen interest in the most modern techniques and the daunting task he was prepared to set himself before he had acquired the skill and experience essential for its successful completion.

The first change of style in Dvořák's operatic output came when, in 1874, he set *King and Charcoal Burner* for the second time in a simple folk style, in keeping with the origin of the libretto as a puppet play. He added a splendid ballad for the King in Act 1 for the 1881 performance, and revised the opera in 1887 after the libretto had been redrafted: he rewrote much of Act 3, and since its music became stronger, more dramatic and far more continuous, there are some inconsistencies of style. He showed growing confidence in the one-act comedy *The Stubborn Lovers* (1874) and was reason-

ably successful in matching a witty libretto, notable for its symmetries, with witty music. The conversational style over a continuous orchestral line which informs the two quartets and nearly all of the duet for Toník and Řeřicha was almost certainly suggested by Smetana's *The Two Widows*. The opera is dominated by the *buffo* bass Řeřicha, who has an affinity with Kecal in *The Bartered Bride*. Beneš-Šumavský's libretto for the five-act opera *Vanda* (1875) is trite and its Polish subject unreasonably inflated, so the opera was doomed from the start. By giving the main musical interest to the orchestra rather than to the singers, Dvořák returned to some extent to Wagnerian methods, but the metamorphosis of the *Vanda* theme in various situations is reminiscent of Liszt. The plot of *The Cunning Peasant* (1877) obviously stems from *Le nozze di Figaro* and also owes something to *The Bartered Bride*. It is an exuberant work, with ample opportunities for big ensembles and dances, and the colourful score is strongly influenced by Czech folk music. Five recurring themes are associated with particular characters, most of whom, however, have no distinct, recognizable musical personality.

Until a good and really demanding text came his way, Dvořák had no real incentive to come to grips with the problem of opera, but a few weeks after completing the Sixth Symphony he received such a libretto. Although the libretto of *Dimitry* corresponds in general outline with those of the then outmoded grand operas of Meyerbeer (and there are a few other weaknesses), it is well written, the main characters are clearly drawn and well contrasted, and it provides some strong dramatic situations. The subject forms a sequel to that of *Boris Godunov*, but Dvořák did not know Musorgsky's opera. The score of *Dimitry*, composed in 1881–2, is rich in melody, especially in Xenia's scenes. The chorus and the big ensembles for the main characters are handled well, the conflict between the Poles and the Russians, a double chorus, being particularly vivid. There is far more assurance and musical richness here than in any of the earlier operas. Dvořák at first hesitated over setting Červinková's libretto for *The Jacobin* but warmed to the subject when he realized how strongly Benda, the schoolmaster musician, reminded him of Lichmann, his teacher at Zlonice. He composed the opera in 1887–8 but in 1897 revised and reshaped Act 3, which consequently contains the most mature music. In general a spirit of gaiety and humour prevails in Act 1, and sentimental charm informs the handling of the singing rehearsal in Act 2. The kernel of the plot, however, centres on the count's intention to disinherit his son Bohuš because of his revolutionary tendencies. Dvořák handled this situation with remarkable psychological insight, enhanced by the sparing use of a melodic fragment that becomes an essential part of the lullaby that Julie sings in order to revive in the count memories of his deceased wife and infant son.

Dvořák's reawakened and intensified interest in Wagner can be clearly seen in his last three operas. The last vestiges of formal recitative vanish, and there is far more continuity. Since there is little declamatory writing, these works are still essentially lyrical, and dances have a natural place in them. The leitmotifs are often concise and are used with greater consistency than before. All three of these operas turn to the world of fantasy: fairy tales form the basis of the first two, and magic is prominent in the third.

There is an abundance of animation, wit and gaiety in *Kate and the Devil* (1898–9), even though the oppression of the villagers necessarily casts a deep shadow at times. Dvořák depicted his characters well, from the garrulous Kate to the quaintly comic Lucifer. An exception is the princess, who presented a problem he found difficult to solve: she is regarded with bitterness by her subjects, but she does not appear until Act 3, by which time she is frightened and already in a contrite mood. Following Smetana's example, Dvořák transformed some of his themes to make them serve several different functions. The bagpipe tune is changed to symbolize Kate's sharp tongue and becomes the basis for a waltz at the inn and some dances in Hell. Similarly the motif of Hell and the devils assumes various forms, perhaps the most striking of which accompanies the description of Lucifer's fine red castle. *Rusalka* (1900) is a spaciouly and symphonically conceived work. Dvořák evidently found the spirits of river and lake and of the woods the most fascinating elements in it, for it is they, rather than the prince, the foreign princess or the comic gamekeeper and scullion, who dominate the opera. *Rusalka*, the frail, lovelorn heroine, her grotesque, melancholy father, ruler of the underwater kingdom, and Ježibaba, the witch, who is prepared to invoke her magic arts for *Rusalka* only so long as the penalties are understood, are all more real than the royal pair of humans, and their hopes and fears are expressed against a responsive and colourful backcloth of singing and dancing sprites.

Dvořák wrote his last opera, *Armida* (1902–3), when his enthusiasm for Wagner was at its height. He used in it a large number of leitmotifs, which throughout the work are constantly changed and adapted to new circumstances. The subject offered splendid opportunities for creating rounded characters. The vicissitudes of Rinaldo and his eventually achieving full stature as a Christian warrior are strongly underlined in the music.

8. Růžena Maturová as *Rusalka* in the first performance of Dvořák's opera (Prague, 1901)

as are Armida's principal characteristics, feminine charm and determination to fight for her own cause. The powerful Ismen is vividly portrayed and is given some of the strongest music in the opera, but the lesser characters are not nearly so convincing. Vrchlický's version of the story differs from Tasso's at numerous points; Armida meets her death on the battlefield in precisely the same circumstances as Clorinda did at the hands of Tancred, and there is indeed dramatic justification for this, but the reliance on magic seems excessive and may have caused the opera to be less frequently performed than the high quality of much of the music warrants.

10 CHORAL WORKS A number of Dvořák's large-scale choral works played a significant part in his artistic development and growing reputation. The *Hymn the Heirs of the White Mountain*, which he twice revised as the demand for his music increased abroad, brought him his first public success. The *Stabat mater* was in great demand among choral societies in several countries, and *The Spectre's Bride*, which had its first American performance at Providence, Rhode Island, only three months after its spectacular success at Birmingham in 1885, was much admired in the English-speaking world during Dvořák's lifetime. By contrast, *St. Ludmilla*, on which he had laboured hard and which he considered to be one of his finest works, proved to be a failure with the public.

The *Hymn the Heirs of the White Mountain* (1872) showed promise for the future rather than outstanding achievement. It is a setting of seven verses of a poem by Vítězslav Hálek, the earlier part of which expresses the sorrows of the Czechs in the wake of their defeat of 1620, there follows a call for the loyalty, courage and heroism needed to bring about the rebirth of the nation. The death in September 1875 of Dvořák's second child, when two days old, prompted him to begin sketching his *Stabat mater* five months later, but possibly this was not the only reason, for he was a simple, devout Catholic who by 1892 had set all of the other major liturgical texts, with the exception of the *Magnificat*. He did not score the *Stabat mater* until late in 1877, shortly after losing two more children. His approach to the composition of this work was that of an instrumental composer: he produced a series of balanced forms and reintroduced some of the opening music in the final number but with a dramatic alteration at a climax. The first of the ten numbers is the most impressive and almost certainly the most deeply felt. It begins with rising octaves, which appear to point towards the cross, and then slow and partly chromatic descents lead towards the figure of Mary. Not all the music in other sections matches the words so well, but there are some notable passages, particularly at the end of 'Fac, ut ardeat', in the simple and charming 'Tui nati vulnerati' and in the highly individual 'Inflammat'.

The dramatic cantata *The Spectre's Bride* (1884) came midway between the operas *Dimitri* and *The Jacobin*. It is a setting of a ballad by K. J. Erben whose macabre subject, so characteristic of the early Romantic period, has probably discouraged performances in the 20th century. Dvořák allotted the narrative to a solo bass and the chorus, and the parts of the maiden and the demon bridegroom to a soprano and a tenor. The work is rather more stylized than his operas; as one would expect in an important work by him from this period, it is melodious, colourful and rich in invention. A prom-

inent element is a theme announced at the beginning which helps to unify the cantata but is not used consistently in any specific context.

The oratorio *St. Ludmilla*, written in 1885-6, is planned on a large scale and along monumental lines; the choruses often give strong reminders of Handelian methods. Except for the powerful chorus in Russian style at the beginning of the third part, Dvořák appears to have been less at ease in the Christian choruses than the pagan ones, the first of which is especially fine. He invariably felt a natural sympathy with his heroines, and *Ludmilla* is no exception, for she has the best solo arias. Her personal theme is not heard until after she has been converted, two other motifs symbolize light (both pagan and Christian) and the cross.

Dvořák composed the Mass in D for the consecration of Josef Hlávka's private chapel in 1887. It is a relatively small-scale work, expressing his direct, sincere response to the text, and it is slightly coloured with pastoral elements. The Requiem (1890) was a far greater challenge to him. A four-note chromatic, syn-copated motto theme, reminiscent of the fugue subject of the second Kyrie of Bach's Mass in B minor, appears in almost all sections of the work. Given the awe and solemnity with which Dvořák approached the text, it could perhaps signify a sorrowful questioning of the mystery of life and death, but he made no attempt at the time to express in words his thoughts on the subject. There is more than a touch of drama at appropriate moments, with splendid climaxes in the 'Quam olim Abraham' fugue and in the Agnus Dei at the words 'Cum sanctus tuus in aeternum', after which there is an ethereal close. In general there is a strong vein of lyricism, which is specially telling in the Gradual and 'Recordare', in the quiet sections of the 'Confutatis' and above all in the Offertory. Instead of acknowledging in his *Te Deum* the three natural divisions of the canticle, Dvořák gave it four sections corresponding superficially to the four movements of a symphony. The prayer 'Dignare, Domine' has a particularly expressive melodic line for solo soprano; in several other places the basis of the music is pentatonic or tetratonic. The work opens with a joyful peal of sound over a double pedal which returns at the end of the first section and again in the final 'Alleluia'.

11 ORCHESTRAL WORKS.

(i) *Introduction* Dvořák's admiration for the music of Mozart and Beethoven and his great love for Schubert led him towards symphonic composition on more or less Classical lines before his emergence as a nationalist composer, and this predilection was reinforced by his warm friendship with Brahms. It was only towards the end of his career that, prompted by his sympathetic response to Czech folklore, he turned to the newer and rather more fashionable symphonic poem, which nationalist composers normally preferred. He had, however, found an outlet for his national aspirations much earlier in the Slavonic Dances, Slavonic Rhapsodies and Hussite Overture and in individual movements in the symphonies and Violin Concerto. For all the enormous, and justified, popularity of the Ninth Symphony, a work which has been accepted in areas where the rest of his music is scarcely known, there can be little doubt that the highest achievements of his creative career are the Seventh Symphony and the Cello Concerto.

(ii) *The symphonies.* Even though they have certain

merits, Dvořák's first two symphonies, written in 1865, are unlikely to find a permanent place in the orchestral repertory. The main theme of no.1 became the principal theme of several of the piano *Silhouettes*, completed in 1879, and the finale of no.2 contains a clear anticipation of the important motif of the water sprites in *Rusalka*. Wagnerian influences are prominent in the three-movement Symphony no.3 in E \flat (1873) but are almost wholly absent from no.4 in D minor (1874), except in the Andante sostenuto, where clarinets, bassoons and brass present at the outset a theme that might almost be a direct quotation from Wagner. At this stage Dvořák had not solved the problem of form. The first movement of no.3 is unorthodox -- for instance, in the definitive version the second subject is not recapitulated -- but it has a splendidly broad sweep. Uncomfortable indications that the coda has already begun interrupt progress in the middle of the slow movement of no.4. The finale of no.3 is invigorating thanks to its unceasing animation, but in that of no.4 there are suggestions that too much has been attempted with the main theme. There is a thematic link between the first movement and slow movement of no.3, and the scherzo of no.4 contains a reference to the main theme of the first movement.

The Symphony no.5 in F (1875; published as no.3) provides remarkable evidence of Dvořák's growing mastery; it is significant that he found it unnecessary to alter the design of any of the quick movements when he prepared it for publication 12 years later. The key of the Andante, A minor, is of some structural importance in that the finale begins in it and avoids establishing the tonic for more than 50 bars. The drama of this movement is thus much enhanced, as it also is by a particularly powerful development section. The coda includes subtle hints of the main theme of the first movement, which eventually returns on the trombones. Dvořák wrote the Symphony no.6 in D (published as no.1) on the crest of his first nationalist phase in 1880. As has been mentioned above, the first and last movements owe something to Brahms's symphony in the same key, and Beethoven's influence is felt too, particularly in the opening of the Adagio, which recalls the slow movement of the Choral Symphony. The work is nevertheless highly characteristic of Dvořák himself: it is rich in themes, and although it is planned on classical lines it modulates freely, the second subject group of the first movement being in B minor and major. National colouring is most apparent in the scherzo, which for the first time in a symphony is a *furiant*; it is, moreover, one of Dvořák's finest.

Whereas the D major Symphony can be seen as the work of a contented and confident man with a keen enjoyment of life, the Symphony no.7 in D minor (1884-5; published as no.2) seems to be that of one who has battled with his conscience and experienced tragedy. The Piano Trio in F minor of 1883 was Dvořák's first work in an epic manner, but in the symphony he probed to even greater emotional depths, showed even greater mastery in the design and in the opinion of many produced his greatest work in this form. The strong, concise development, the compression of the recapitulation and the tension in the coda are particular strengths of the first movement. The tranquillity of the opening of the Poco adagio is succeeded by questioning, melancholy and a brief storm. The scherzo, though barred in 6/4 time, retains much of the character of a *furiant*, the prevailing mood of which is relieved by a

charming trio. The heroic spirit that dominates the symphony is instantly apparent in the finale, and it continues almost uninterruptedly until the powerful peroration resolves on a major chord.

The Symphony no.8 in G (1889; published as no.4) is by contrast a genial and relaxed work, abounding in Czech feeling. The sombre mood of the introduction soon passes, and even though the second theme stems from it the first movement is dominated by the delightfully fresh theme announced by the flute. There are contrasts of mood and colour in the Adagio; in the C major section the descending scales suggest a cimbalom. The finale is a set of variations constructed on an experimental and not altogether satisfactory design.

While working on the Symphony no.9 in E minor, 'From the New World' (1893, published as no.5), Dvořák stated: 'The influence of America can be felt by anyone who has "a nose"'. In saying later that it was really 'a study or sketch for a longer work', he had in mind his projected composition on *The Song of Hiawatha*. The dance of Pau-Puk-Keewis lay behind the scherzo, and Minnehaha's funeral may have inspired the Largo. He explained that the title of the work simply signified 'Impressions and greetings from the New World'. Although some American influences are obvious, it remains fundamentally Czech. It is Dvořák's only work with a motto theme in every movement. He has been criticized for introducing into the finale a procession of themes from earlier movements, but the electrifying impact of the climax of this movement -- and of the symphony -- is undeniable the motto theme reappears angrily, the introduction to the Largo 'strides over the world like Wagner's Wotan' (Tovey), the Largo and scherzo themes pair off, and the motto and the finale theme combine to produce extremely astringent harmony.

(iii) *Other orchestral works.* The Piano Concerto in G minor (1876) is written on commendable Beethovenian lines and has a number of attractive features but is not very successful either as a virtuoso composition for the instrument or as a work of art. The Violin Concerto in A minor (1879-80) is more rewarding. Joachim, to whom the work is dedicated, helped Dvořák with the solo part but he never played it. The concerto was a product of the nationalist enthusiasm that coloured the D major Symphony in 1880. The main theme and a subsidiary theme of the final sonata rondo are in *furiante* rhythm, and the central episode is a *dumka*. Dvořák's decision at the end of the first movement to proceed directly to the Adagio after only a few bars of recapitulation (despite having been advised not to do so) was probably unwise; for one thing it prevented the exploitation of the interesting idea of bars 78-85.

A composer normally writes a cello concerto with good cause, and in the case of his B minor concerto (1894-5) Dvořák waited many months before complying with the request for one from Wihan. His being a string player himself was an initial advantage: he had had valuable experience of problems of orchestral balance and blend and thus knew that the quiet playing of the cello in the Adagio could be tellingly supported by three trombones, which he needed elsewhere in that movement for some menacing passages in minor keys. The invention in the concerto is exceptionally rich. In the second subject of the first movement, for example, the soloist takes up the beautiful melody of the horn

from the tutti, plays spiccato arpeggios on an ambiguous harmonic framework, presents a new melodious idea in F# as well as a bold chordal motif, and converses briefly with a trio of horns before leading up to the climax. The omission of the expected first subject and transition in the recapitulation is probably Dvořák's most brilliant and dramatic example of short-circuiting. The coda of the rondo recalls the main theme of this movement.

The Symphonic Variations (1877) are a vivid witness to Dvořák's growing powers, imagination and resource during the years between the fifth and sixth symphonies, and the *Scherzo capriccioso* (1883) is a brilliantly successful exemplar of another of his most productive periods. The Hussite Overture from the same year makes use of two celebrated tunes, the 15th-century *Svatý Václav* ('St Wenceslas') melody and the Hussite hymn *Ktož jsú boží bojovníci* ('Those who are God's warriors'), in addition to original material which absorbs elements from them. The development section represents a battle from which the Czechs emerge triumphant, so the main theme is then recapitulated in C major instead of in the original C minor. The three overtures of 1891 2, *In Nature's Realm*, *Carnival* and *Othello*, are a manifestation of Dvořák's belief that Nature was created by the Almighty, but was in another sense also the giver of life, which can be both beautiful and ugly. A theme representing Nature appears in all three. The exhilaration and verve of *Carnival* have helped to make it one of Dvořák's most familiar works, but the strongly dramatic *Othello* in particular has not received the attention it deserves. The references in the manuscript score to several points in Shakespeare's tragedy show that he conceived the overture programmatically.

In the four symphonic poems based on Erben's ballads (1896), themes are associated with characters or other important elements in the dramas, just as in the operas. Dvořák arrived at those of *The Golden Spinning-wheel* by setting the poet's actual lines to music, following the example of Liszt and Smetana he transformed the king's theme to make it appropriate for the wicked stepmother and also for the mysterious, kindly old man, but notwithstanding such subtleties he appears to have followed the complex tale too faithfully. *The Water Goblin*, which illustrates the tale in seven short scenes and a coda, is planned in the form of a rondo. By contrast, the lengthy repetition at the beginning of *The Noon Witch* shows Dvořák temporarily rejecting a precise representation of the ballad for the sake of an initial musical balance. In the rest of the work he brings the remaining stanzas to life vividly and dramatically. *The Wild Dove*, which adheres closely to the ballad, falls naturally into four scenes and an epilogue.

There is much of interest in Dvořák's other orchestral works, from the two serenades, one for strings, the other mainly for wind, to more overtly nationalist works such as the Czech Suite and the three Slavonic Rhapsodies and the two sets of Slavonic Dances, originally written for piano duet. The latter have a special significance, because they draw attention to his great interest in his country's folk music, and the first set (1878) provided him with the opportunity of developing some important characteristics of his national and personal style. He was not particularly concerned to keep strictly to one type of dance within a single piece, the seventh dance, for instance, starts in the style of a Moravian *tetka* (dance in duple time); when it

becomes more animated it resembles a *kvapík* ('galop'), and it also contains elements of the *skočná* and *vrták* (dance in a rapid 2/4). The finer second set (1886) displays a greater artistry and maturity.

(iv) *Orchestration*. For the most part Dvořák relied on the standard orchestra of the period but augmented it slightly from time to time. The Third, Eighth and Ninth symphonies and several other works besides require an English horn, and the Fifth includes a bass clarinet, but the double bassoon does not appear in the orchestral works until the Suite in A of 1895. He seldom wrote for the harp, but he used it in the *Scherzo capriccioso*. He did not use any of the less common percussion instruments until he reached the symphonic poems. To cite an example from outside the orchestral works, the effective use he made of Fontaine-Besson's improved double bass clarinet in the striking passage for English horn, bass clarinet, bassoons, cellos, two harps and other instruments describing the red castle in Hell in *Kate and the Devil* is an indication that he was alive to new developments. He had an instinctive feeling for orchestral colour. He was particularly successful in his imaginative use of the flute and piccolo as can be seen in *The Golden Spinning-wheel* and the gentle, thoughtful responses made by the piccolo in the trio of the Sixth Symphony. By means of tremolos for the flutes and an oboe and rapidly reiterated notes on the harp he convincingly suggested the cooing of the bird in *The Wild Dove*. The final four-note chord for *pianissimo* divided double basses in the Largo of the Ninth Symphony is most effective, and the felicitous use of *pianissimo* strings, a muted horn (doubling the second violins) and echoes from the flute makes the 14th variation one of the most memorable in the Symphonic Variations (see ex.6).

12. CHAMBER MUSIC. Dvořák was strongly drawn towards chamber music, for he was a viola player and greatly admired the work of the Classical masters. It is hardly surprising, then, that his op.1 is a string quintet and his op.2 a string quartet and that he composed chamber works throughout almost the whole of his

creative life. Among them are several that are imperishable and stand worthily alongside the best of his orchestral works. The finest is surely the Piano Trio in F minor, op.65, where he strove to give of his very best and produced one of the most outstanding of all his works. Those from his nationalist phases contain Czech dances and dance rhythms and the characteristic Dvořákian *dumka*; there are notable examples in the String Sextet, the op.51 String Quartet, the perennially fresh Piano Quintet and the highly original *Dumky* Trio. Three works date from his American period.

Dvořák is known to have completed almost 40 chamber works for various combinations. The same kind of problems beset him here as in other areas of his work. He was unable at first to organize his material satisfactorily and avoid prolixity, and until he was able to keep Wagner's influence in check no solution seemed possible. At present the authentic, unedited score of the String Quartet in F minor op.9 (1873) is missing, so there is no evidence at this important stage in his development. But the work that followed in the same year, the String Quartet in A minor op.12, appears to have been the real turning-point. He planned it in five continuous sections but decided to transform it into a conventional four-movement work and then failed to complete it. His next quartet op.16, again in A minor, is orthodox but rather uninteresting. Because of some operatic associations, its unusual textures and the casual arrangement of keys in the first movement, the String Quintet in G op.77 (1875) is rather exceptional for a chamber work, the scherzo is a delightful piece. There followed three works including piano, the first two of which also date from 1875. The piano writing in all three contains an unusually large number of parallel passages in the treble and bass, and there are frequent overtones of salon music. The Trio in B♭ op.21 is well proportioned without a single weak movement, and there is a naturalness about the musical thought. The first movement of the Quartet in D op.23 is attractive, and the plaintive variations have a simple charm, but the experimental third movement, a combination of scherzo (3/8) and finale (4/4), is poorly integrated. The prominence of minor keys in the Trio in G minor op.26 (1876) can be attributed to Dvořák's distress at the death of a daughter, further manifested in the unrest caused by the use of conflicting rhythms in the first movement; the Largo and the scherzo are the most satisfactory movements in this uneven work. There is a wistful charm in the first movement of the String Quartet in E op.80, another work affected by Dvořák's feelings of melancholy in 1876. As in other slow movements of this period, the Andante con moto suggests the mood of a *dumka*; its two themes are effectively combined in the coda. Dvořák's improving craftsmanship is more apparent in the String Quartet in D minor op.34 (1877). The plaintive and slightly Schubertian first movement is finely wrought, and its development, which starts with a beautiful shift of key, rises to an unexpected climax. In this movement and also in the Adagio the second theme grows out of the first, and that of the opening movement is beautifully grafted into the coda of the Adagio. Polka rhythm and the suggestion of a *skočná* had occurred in the finales of the piano trios opp.21 and 26, but in this quartet Dvořák for the first time made a whimsical polka serve as a scherzo.

The String Sextet in A op.48 (1878) is fully repre-

sentative of Dvořák's national style and was his first chamber work to attract attention abroad. The second movement is a highly original *dumka* in D minor with the rhythm of a polka; the scherzo is called a *furiant*, but it is not a very typical one. The finale is an attractive set of variations on a theme which, surprisingly, is in B minor, and it slips into A only towards its final cadence. Dvořák modelled his fourth variation on one from Beethoven's op.74 Quartet. The opening bars of the String Quartet in E♭ op.51 (1878-9) were probably influenced by a recollection of the beginning of Mendelssohn's Octet, which is in the same key; they nevertheless have a marked individuality (see ex 7)

Ex 7 String Quartet in E♭ op.51

Allegretto ma non troppo

National elements are again conspicuous. Polka rhythm soon appears and also forms the basis of the second subject, a contrast of moods occurs in the development when the main theme in augmentation is accompanied by the polka theme. The second movement, with its melancholy tone and scherzo-like interludes, is a typical Dvořákian *dumka*, and the vivacious finale shows the influence of Czech leaping dances.

In his Violin Sonata in F op.57 (1880) Dvořák reversed the normal practice by writing a yearning and questioning first subject and an animated second subject influenced by Czech dances; in the finale the dance element becomes the dominant factor. When writing the String Quartet in C op.61 in 1881 for the Hellmesberger Quartet, Dvořák may have kept national elements to a minimum because he was aware that a section of the Viennese public harboured prejudices against the Czechs; they are confined to the trio of the scherzo and the finale. This modification of his musical standpoint may have been an advantage at that time, for the quartet is one of his best. The Poco adagio, with its fascinatingly syncopated texture, was originally intended to form part of the Violin Sonata. The main theme of the first movement paves the way for a bold

use of key, and Dvořák is at his most audacious in the foreshortened recapitulation, very little of which is in the tonic. The theme of the scherzo is derived from a motif from the first movement.

The Piano Trio in F minor op.65 (1883) marks a decisive step forward in Dvořák's artistic career and offers a foretaste of the epic style that he so splendidly realized two years later in the Seventh Symphony. Its intensity of feeling and seriousness of purpose are unmistakable. He had begun no previous work with a theme possessing such immense possibilities (see ex.8).

Ex 8 Piano Trio in F minor op.65

Allegro ma non troppo

After the striving development, fresh tension is engendered in the recapitulation, and in the coda a new, poignant version of the main theme is heard. A most eloquent reference to this theme occurs at the end of the Poco adagio. In the Allegretto grazioso the tendency towards pathos is ameliorated by some entrancing cross-rhythms. Even the second subject of the finale is in a minor key, though eventually yet another version of the principal theme establishes the tonic major and banishes the last vestiges of conflict.

The Terzetto in C op.74 (1887) is a modest work but beautifully written for the two violins and viola. The scherzo is a splendid *furiant*. The finale is a set of variations based on a theme with constantly shifting tonality, which leads eventually to the tonic minor. The Piano Quintet in A op.81, composed in the same year, epitomizes the quintessential features of Dvořák's music: melody and counter-melody, vital rhythm, varied and colourful scoring, a variety of moods ranging from sorrow to gaiety, and the skill of a craftsman allied to the sensitivity of an artist. In the first movement there are characteristic changes from major to minor, and the second subject is recapitulated in the submediant. The Andante con moto is a particularly fine *dumka*, but the so-called *furiant* that follows has no obvious connection with that dance. The quintet appears to have stolen the limelight from the scarcely less admirable Piano Quartet in E♭ op.87 (1889). The conflict of moods between piano and strings in the first movement is resolved towards the end. The Lento is unusually rich in themes and spans a wide emotional range. Following a procedure foreshadowed in the Terzetto, the good-humoured finale is in the tonic minor. The Piano Trio op.90 (the *Dumky*, 1890-91) consists of a series of six *dumky*, all in different keys and the majority in binary form. Most start with a slow meditative section and continue at a much faster pace. It was bold of Dvořák to adopt this unique, daringly simple plan, and he executed it with keen imagination and considerable resource, giving each *dumka* a distinct individuality and colouring.

The first of the three chamber works Dvořák wrote in the USA, all of them in 1893, is the String Quartet in F op.96 (the 'American'). Although he modelled the opening bars on the beginning of Smetana's First Quartet, he created an entirely different mood. Several of the themes have pentatonic tendencies, but few are strictly pentatonic. The crowning glory of the work is the Lento, which, with its plaintive, soaring violin melody, is a most effective foil to the animation that prevails in the rest of the work. The theme at bars 21-4 in the Scherzo is adapted from a birdsong that Dvořák heard in the Iowa woodlands. The String Quintet in E♭ op.97 also includes some 'primitive' features, for example, the motif at bars 63-4 of the first movement is a transformed fragment of Indian song. The outstanding movement is the Larghetto, a set of variations that follows Haydn's example in having a double theme, in A♭ minor and major. Dvořák had originally drafted the second one as a tune for the American national hymn, *My country, 'tis of thee*. The third work written in America is the delightful Violin Sonata in G op.100, whose themes again tend to be 'primitive'. The Larghetto (the title 'Indian Lament' is unauthorized) is specially appealing, and so is the E major melody in the finale.

Finally there are the two string quartets that Dvořák composed in 1895 after he returned home from the USA, which are among the finest of all his chamber works. The first movement of the Quartet in G op.106 has a number of unexpected features, including a passage in B during the B♭ second subject, and the quaint transformation of the main theme when it is recapitulated after the masterly development section. The Adagio ma non troppo, one of Dvořák's most deeply felt slow movements, is, like the slow movement of op.97, a series of variations on alternating themes, this time in E♭ major and minor. Its climax, a powerful

affirmation in C, was undoubtedly suggested by the similar passage in the same key in Smetana's first quartet. The second subject of the first movement is recalled in the finale. Even if the Quartet in A♭ op.105 has no movement to compare with the Adagio of the G major Quartet, it is a particularly satisfying work as a whole. In the first movement the second limb of the theme attracts attention; it is surely no coincidence that rather similar harmony in the same key had occurred at the end of the slow movement of Smetana's E minor Quartet. The scherzo of op.105 is a superb *furiant*, whose trio makes use of two themes from the opera *The Jacobin*.

In his earlier chamber works Dvořák made no attempt to exploit the potential of the piano in more than a very limited way. By the time he reached the Violin Sonata, however, he had overcome that deficiency, and in the works that followed, the F minor and *Dumky* Trios, the Piano Quintet and the Piano Quartet in E♭, he wrote much more confidently and effectively, with a genuine understanding of keyboard idiom and an appreciation of the vast range of mood and expression of which the piano is capable. His being a viola player was a considerable advantage in that it helped him to write idiomatically for the strings. It does not, however, explain fully why his chamber works possess an indefinable quality, more apparent to the players than to the listener, which is due largely to their strikingly individual textures.

13 PIANO MUSIC Dvořák made no claim to be more than an average pianist, but in that capacity he participated in performances of his own chamber music from time to time, and in particular he undertook a long tour in 1892, during which the *Dumky* Trio was invariably the central item in the programme. In his piano works he shed the salon style which is a conspicuous feature of his early chamber music with piano and eventually showed himself to be a gifted and imaginative composer for the instrument.

Dvořák favoured dances and characteristic or mood pieces in his output for piano and wrote only one longer work, the Theme with Variations in A♭ op.36, dating from 1876, the year of his first significant piano works. He took particular care over it. As is evident in the first and third variations in particular, he borrowed some ideas from the variations in Beethoven's Sonata op.26 in the same key. Since he felt there was no need for the variations to adhere strictly to the form of the theme, he was able to provide them with a natural sense of growth. The outstanding success two years later of the first set of Slavonic Dances, in their original version for piano duet, created a demand for more solo piano music; this included the 12 *Silhouettes*, in which several of the themes are drawn in rejuvenated form from the First Symphony, and an exuberant *Furiant* in D. The Eight Waltzes op.54, completed in 1880, are not intended for dancing, as the cross-rhythms of no.5 make clear, but are attractive concert pieces.

The remaining piano duets, the *Legends* (dedicated to Hanslick), *Ze Šumavy* ('From the Bohemian Forest') and the second set of Slavonic Dances appeared over the next six years. The *Legends* and Dances were soon orchestrated, but the six pieces of *From the Bohemian Forest* remained solely a keyboard work, except for one of the best of them, *Klid* ('Silent woods'), which Dvořák arranged as a cello solo with either piano, or orchestra. The collection of 13 solo piano pieces *Poetické nálad*

('Poetic tone pictures') appeared in 1889, by which time he had a much greater understanding of the potentialities of the piano. There are obvious influences, for example of Brahms in the first piece and Chopin in the last, but Dvořák's lively imagination and individuality emerge strongly. *Rej skřítků* ('Goblins' dance') is perhaps the most successful; in the delightful *Na táckách* ('Tittle-tattle') Czech characteristics are particularly strong. American influence is conspicuous in two works of 1894, the Suite in A op.98 (orchestrated in 1895) and the eight Humoresques, for many of their themes are pentatonic. The reliance in the latter on four-bar phrases becomes rather wearisome, but the seventh quickly became one of Dvořák's most internationally popular pieces. The Suite is conceived on broader lines, with its second movement, *Molto vivace*, possessing a splendid verve.

14 SONGS AND DUETS Dvořák left more than 100 songs and duets, written, with one late exception, over a period of 30 years, from 1865 to 1895. They comprise simple, lively and tuneful settings of folk poetry, deeply felt yet simply conceived love-songs, a few settings of ballads and songs of strikingly distinctive character such as the *Cigánské melodie* ('Gypsy melodies') and the *Biblical Songs*. He showed a preference for strophic and modified strophic forms.

The earliest pieces calling for mention are three sets of *Moravské dvojzpěvy* ('Moravian duets', 1875-7), one op.20, for soprano and tenor, the other two, opp.32 and 38, for soprano and contralto, all are settings of Moravian folk poetry. The 14 pieces of op.32 are the most familiar. All 22 duets are delightfully fresh and often lighthearted but with occasional shadows of melancholy. Op.20 no.4 and op.32 nos.2, 9 and 10 are a few of the more successful and charming ones. The *Trí novověké básně* ('Three modern Greek poems', 1878) are on a much more ambitious scale than any previous songs and were provided with orchestral accompaniment, now lost. The subject of the simplest of them *Nereidy* ('Nereids'), appears to have suited Dvořák best. He seems to have revelled in the *Gypsy Melodies* (1880) for they spring to life and there is hardly a weak song among them; the set includes, as no.4, the well-known *Když mne stará matka zpívá učiva* ('Songs my mother taught me'). His increasing confidence in writing for the voice is perhaps best shown in the third song, *A les je tichý kolem kol* ('All round about the woods are still'). The interesting accompaniments sometimes introduce dance elements. So completely successful a transformation of an early song after revision as is seen in *Mé srdce často v bolestě* ('Downcast am I'), misleadingly published as op.2 no.3, is unusual. The set of four songs to German words, op.82 (1887-8), stands high among Dvořák's songs and the next set, *Písňe milostné* ('Love-songs'), which are again revisions of early compositions, includes such notable songs as *Kol domu se teď potácím* ('I wander oft past yonder house'), with its attractive polka rhythm, and *Zde v lese u potoka* ('In deepest forest glade I stand').

The set of *Biblical Songs* (1894), an intensely personal document, is an affirmation of faith on Dvořák's part after his friends Tchaikovsky and Hans von Bülow had died and while his own father was critically ill. All the songs are settings of verses from the Psalms taken from the Bible of Kralice. Dvořák seems to have been specially inspired by the words of *Při řekách babilon-*

ských ('By the rivers of Babylon'), for the setting is truly memorable, not least for its heartfelt cry to Jerusalem. The most jubilant song, *Zpívejte Hospodinu píseň novou* ('O sing unto the Lord a new song'), is placed at the end.

Dvořák may not have penetrated quite as deeply as a

Schubert or a Wolf into the heart of the poetry he set. Nevertheless in his best songs, as in his most memorable operatic and choral music, he responded acutely, sensitively and with complete sincerity and conviction to the changing moods of the text. Such songs are an expression of his intense inner feeling.

JOHN CLAPHAM

Dvořákova, Ludmila (b Kolin, 11 July 1923). Czech soprano. She studied with Jarmila Vavrdová (1942-9) at the Prague Conservatory, making her début at Ostrava as Katya Kabanova in 1949; subsequent Ostrava roles included Jenůfa, Rusalka, Mozart's Countess, Aida and Leonora (*Il trovatore*). When she graduated to Bratislava (1952) and then to Prague (1954), she gradually undertook heavier parts - Milada (*Dalibor*), Elisabeth, Beethoven's Leonore, and Senta. In 1960 she joined the Berlin Staatsoper, making her début as Octavian. She gave her first Brünnhilde there in 1962, and added Ariadne, Venus, Tosca, Elisabeth de Valois and the Marschallin to her repertory. Her first Isolde was at Karlsruhe in March 1964, by which time her international career was under way, with subsequent appearances at Vienna (as Katerina Ismaylova, 1965) and the Metropolitan (as Leonore, 1966); at Covent Garden she sang Brünnhilde in complete *Ring* cycles from 1966 to 1971, also playing Leonore and Isolde. She made her Bayreuth début in 1965, as Gutrune, and subsequent roles there included Venus, Brünnhilde, Kundry and Ortrud. Dvořákova's voice is rich and full, *hochdramatisch*, reminiscent of (although less easily produced than) Flagstad's. Her Brünnhilde, comely in appearance and touchingly acted, has been one of the most affecting; the same qualities have lent distinction to her Isolde and Leonore, which compensate in warmth

for what they may lack in vocal ease.

ALAN BLYTH

Dvořák Quartet. Czech string quartet. It was founded in 1951 by members of Ladislav Černý's chamber music class at the Prague Conservatory, and was originally named after its leader, Vladimír Kohlmann; when he left the ensemble in 1953 it was renamed the Dvořák Quartet. Jiří Baxa, who had played second violin, became the leader until 1956. He was followed by Robert Miazga and in 1957 by Stanislav Šrp. Later Jiří Hnyk (b Nymburk, 13 Nov 1939) became leader, Jiří Kolář replaced Baxa as second violin and his place was later taken by Jaroslav Foltýn (b Český Těšín, 18 Oct 1935), the viola player is Jaroslav Ruis (b Prague, 17 Jan 1928) and the cellist is František Pišinger (b Trhove Sviny, 4 Jan 1931). As the Dvořák Quartet they made débuts in Most on 2 March 1953 and in Prague on 11 May 1953, in all-Dvořák programmes. While specializing in the works of Dvořák, which they have recorded complete, they have a large repertory of Classical and modern works (including the quartets of Bartók and Honegger), all of which they play from memory.

RONALD KINLOCH ANDERSON

Dvorsky, Michel. Pseudonym of JOSEF HOFMANN

Dwight, John Sullivan (b Boston, Mass., 13 May 1813, d Boston, 5 Sept 1893). American writer on music. He was sole editor of *Dwight's Journal of Music* (Boston, 1852-81), an influential music periodical and a primary source for the history of music in New England from the earliest orchestral concerts to the founding of the Boston SO. Dwight began adult life as an intellectual of liberal views but modest capacities, graduating from Harvard (1832) and Harvard Divinity School (1836). He was an early but largely passive member of the transcendentalist group led by Emerson, Alcott and the Ripleys. After a brief, unhappy experience as a Unitarian minister, he joined the utopian Brook Farm community in 1841 and became a leading contributor to the *Fourierist Harbinger* (1845-8), where much of his early music criticism appeared. A childless widower after the death of his wife Mary (Bullard) in 1860, Dwight spent his last 20 years as resident librarian and permanent president of the Harvard Musical Association, which sponsored an annual series of concerts, conducted by Carl Zerrahn, under Dwight's management (1865-82). In this position Dwight became the autocrat of Boston music in the 1870s. Without formal training in music, he established his authority as a literary amateur, relying on enthusiasm and an uneven verbal facility. Much concert-going and a journey to Europe in 1860 enabled him to write like an informed and dedicated missionary in a field largely unoccupied. He became famous for his devotion to Beethoven, Mozart and Handel, and for an ever-stiffening resistance to Wagner and other new music. In spite of his limitations, he must be regarded as a music critic of considerable historical importance.

Dyagilev [Diaghilev], **Sergey Pavlovich** (b Novgorod govt., 31 March 1872; d Venice, 19 Aug 1929). Rus-

sian impresario. His career as a musical courier between Russia and the West began in 1907 with five concerts at the Paris Opéra. In the following year he presented *Boris Godunov* (with Shalyapin) in Paris, and in 1909 he returned to launch his Ballets Russes company. Their early productions – notably the Polovtsian Dances from *Prince Igor* (1909) and *Schéhérazade* (1910, music by Rimsky-Korsakov) – met with enormous enthusiasm, as much for the exotic poster-colour costumes of Bakst and for Fokin's powerful narrative choreography as for their brilliant scores. The first composition commissioned by Dyagilev, Stravinsky's *The Firebird* (1910), was another glittering fantasy, and it began an association that continued with *Petrushka* (1911), *The Rite of Spring* (1913), *The Nightingale* (1914), *Pulcinella* (1920), *Mavra* (1922), *Reynard* (1922), *The Wedding* (1923), *Oedipus rex* (1927) and *Apollo* (1928). Dyagilev commissioned most of these (*The Wedding*, which moved him deeply, was dedicated to him) as well as Ravel's *Daphnis et Chloé* (1912), Debussy's *Jeux* (1913) and Strauss's *Josephslegende* (1914). These ballets showed that the company's interests were diversifying. In the next few years Dyagilev was partly responsible for instigating neo-classicism by suggesting orchestrations of Scarlatti and 'Pergolesi' to Tommasini (*Les femmes de bonne humeur*, 1917) and Stravinsky (*Pulcinella*) respectively. Dyagilev also encouraged leading visual artists to design for him. Picasso collaborated on *Parade* (1917, music by Satie), *El sombrero de tres picos* (1919, music by Falla) and *Pulcinella*. The Ballets Russes choreographers, after Fokin, included Nijinsky, Massin, Nijinska and Balanchin. During the 1920s Prokofiev composed *The Buffoon*, *The Step of Steel* and *The Prodigal Son* for Dyagilev, but this was a period of decline: the Russian ballet followed fashion instead of determining it, the scores of Poulenc, Auric and Sauguet were poor successors to those of Debussy and Ravel, *Oedipus rex*, composed for the 20th anniversary of Dyagilev's theatrical activity, was not appreciated by him and was given only in concert performance. 12 years earlier Stravinsky had sketched a portrait of Dyagilev as a 'circus ringmaster' in the Polka of the Three Easy Pieces for piano duet.

PAUL GRIFFITHS

Dyce, Richard (b Odensvi, Västmanland, 1 Sept 1811, d Södertälje, 28 July 1877). Swedish folk music collector and antiquarian. He studied law at Uppsala University (1831–4) and was then engaged in official duties until 1842. He was a good amateur singer but had no professional training in music. While still a student he made rune stones and the study of folk traditions his main interest in life. In spite of poor health, he travelled throughout Sweden in pursuit of this interest until a few years before his death, working particularly in the

province of Dalarna. His work was partly supported by the Vitterhetsakademien and by the State. Most of his findings were published in Dybeck's journal *Runa* (1842–50 and 1865–76) or in separate editions of folk music (1846–56). The most important of these was *Svenska vallvisor och hornlåtar* (Stockholm, 1846), containing unarranged transcriptions of shepherds' music. Through his publications and his well-attended folk music concerts, Dybeck not only created a wide interest in folk music but also influenced Swedish art music, dominated after 1850 by a nationalist trend.

Dybeck's name is now associated above all with the text of the Swedish national anthem, *Du gamla, du fria* (originally *friska*), which was adapted to a folk tune. It was sung at his first folk music concert in 1844 and printed in 1845. However, the song was officially recognized as a national anthem only after Dybeck's death.

FOLKE BOHLIN

Dyce, William (b Aberdeen, 19 Sept 1806; d Streatham, 14 Feb 1864) Scottish painter, pioneer in the revival of plainchant in Anglican use. The third son of a physician, Dyce showed a talent for painting and music at an early age. While still a pupil at Aberdeen Grammar School, he taught himself to play the organ, and at the age of 12 could extemporize 'with great facility'. He took his MA at Marischal College, Aberdeen, at the age of 16, going on to read medicine; but finding the subject uncongenial, he turned to theology with the intention of entering the priesthood, though his enthusiasm for painting remained strong. Thenceforward, the three main interests of his youth – painting, music and the church – were to exert their combined influence upon his activities. The religious subjects which Dyce found so congenial in his meticulously executed canvases display one aspect of that merging of influences. Another is to be found in his scholarly endeavours for the reform of church music.

After establishing a firm position as a professional painter, in 1838 Dyce was appointed superintendent of the Schools of Design, Somerset House. Two years later he was elected professor of the theory of fine art at King's College, London. It was during his first four years at King's that Dyce turned his attention to a serious study of church music. The result was seen in the formation of the Motett Society in 1841, and in the publication of his sumptuous edition of the Common Prayer, *The Order of Daily Service . . . with Plainchant* (1842–4). In the preface and appendix to that volume Dyce examined the nature of plainchant, opening the way for a clearer understanding of the subject in England, and of its use with English text in the Anglican liturgy. The revival of Merbecke's music for the Communion Service and the production of Helmore's *Manual of Plainsong* were both helped by Dyce's pioneer activity.

BERNARR RAINBOW

Dygon [Wyldebore], **John** (fl 1497–1538). English composer. In 1497 he was at St Augustine's Abbey, Cambridge, where another John Dygon possibly his uncle, or merely a patron) was abbot. In 1512 Dygon gained the BMus at Oxford but he returned to the abbey, becoming sub-prior before 1521. In that year he went to Louvain to study with Vives, with whom he returned to England to the abbey two years later. He was prior from 1528 to the dissolution. In 1538, like other members of the abbey, he changed his name, calling himself John Wyldebore, and he is listed with that name in the record of pensions given to former monks. It is possible that Wyldebore was his family name (it is fairly common in Kent), and that he adopted 'Dygon' as a compliment to his patron. Several priests with similar names held livings in Kent at this time. The most celebrated, John Wilbore of Rochester, cannot be Dygon, although it is possible that the cleric at Willesborough in 1542 or the vicar of Minster from 1550 to 1557 may have been. Both these parishes had been in the gift of St Augustine's.

Two short motets for three voices by Dygon, *Ad lapidis positionem* and *Rex benedicite tuos*, survive in the Baldwin Book (GB-Lhm R.M.24.d.2). They may be parts of longer works, but they show a typically English blend of florid melismatic lines and syllabic sections. A treatise in Trinity College, Cambridge (GB-Ctc O 3.38), has been ascribed to Dygon on the strength of a note following a music example. 'Quod Joannes Dygons M Vuylborns'. The treatise, written in the early 16th century, is a close copy of extracts from Gaffurius with new music examples.

STANLEY BOORMAN

Dykes, John Bacchus (b Hull, 10 March 1823; d Ticehurst, Sussex, 22 Jan 1876). English composer. While still a schoolboy he became organist of St John's, Hull, where his grandfather was vicar. Secular as well as sacred music was cultivated in his home, and he was taught the violin and the piano. He took a classics degree at Cambridge in 1847. His letters from Cambridge hardly mention church music except Walmisley's organ playing. He took lessons from Walmisley and joined his madrigal society, in which he particularly enjoyed Morley's madrigals and ballets; as president of the Cambridge University Musical Society he revitalized orchestral playing. After a year as curate at Malton, Yorkshire, he became precentor and minor canon at Durham in 1849; his duties included charge of the choir, which he improved by insisting on more rehearsal and the regular attendance of lay clerks. He also began the annual music festivals in the cathedral for choirs drawn from as far away as Newcastle, and during the long illness of Henshaw, the cathedral organist, his organ playing was admired. Some of the hymns he composed for various friends became locally popular through non-statutory services held in the Galilee Chapel of the cathedral. Hearing of the projected issue of *Hymns Ancient and Modern*, Dykes timorously sent seven of them to the music editor, Monk. All were accepted, more were requested and ultimately 60 tunes

by Dykes were included in *A & M*. In the year of the first edition (1861) Durham University awarded him an honorary doctorate in music. Despite intense modern reaction against Victorian hymnody, and particularly against Dykes, six of his hymn tunes persist in general use – *Nicaea* ('Holy, holy, holy'), *Hollingside* ('Jesus, lover of my soul'), *Melita* ('Eternal Father, strong to save'), *Horbury* ('Nearer my God to thee'), *St Cross* ('O come and mourn') and *St Cuthbert* ('Our blest Redeemer').

For all his love of playing, singing, hearing and directing music, there is no evidence that Dykes undertook training, even with Walmisley, with the intention of publishing his works. The tribute to his tunes by H C Colles in *The Oxford History of Music* (vii, 1934) shrewdly describes him as an amateur musician who could not tell why he succeeded or failed in composition beyond judging whether the music suited the words or not. Composing was for him the by-product of a vocation to which he was wholly devoted, and which led him in 1862, despite Ouseley's remonstrances, to resign his cathedral post and become vicar of St Oswald's. Both the nature and the varying quality of his music is directly related to the aims of the 'Church revival' party, which cluttered parish chancels with stalls and organs, and introduced surpliced choirs to imitate cathedral uses and sing hymns that were often like partsongs. *Lux benigna*, Dykes's treatment of Newman's 'Lead kindly light' which the cardinal himself greatly approved, is as much a partsong as Barnby's *Sweet and Low*. Among the Church revival's quantities of jejune canticles, anthems and communion offices, Dykes's lack even the distinction of unusual vulgarity and sentimentality. They are less pretentious and elaborate than most of their time and kind, for the organ part normally doubles the dull voice parts. His predominance in *A & M* has led to the mistake of thinking him typical of Victorian sentimentality, which he reflects only in response to sentimental words, but despite Faber's lachrymose verses, Dykes's best hymn tune, *St Cross*, could actually be mistaken for music by Gibbons, his favourite church composer (except for the inspired unison of the last line). Less striking, but harmonically also in the Gibbons vein, is *Lux vera* in the second supplement of *A & M* (1916). The augmented 6ths and other chromatic chords made familiar by Schubert, Spohr, Chopin and others in more appropriate contexts than congregational music were more characteristic of other Victorians than Dykes, who imitated some of his contemporaries, such as Hervey and Barnby, yet most of the tunes in which he did so are now obsolete. One or two remain because the melody itself is well shaped and its climaxes are well contrived (e.g. the evening hymn *Strength and Stay*). Where Dykes's music suggests unctuous piety it is normally inherent in cosy melodies which tend to hug the mediant and avoid striking leaps. This would be true of the admirable *Horbury* but for the first modulation to the mediant minor and then the climax on the chord of the flattened 7th.

It was Dykes's studies with Walmisley that made possible his only two lengthy works worth reviving. One is an unaccompanied setting of the funeral sentences. *I am the Resurrection and the Life* – admittedly in extended homophonic hymn style, but with fine voice parts and in phrases so tempered by verbal rhythm that they avoid monotony and take varied lengths. The other is the anthem *These are they*. It is too long for all its sections to be used in normal cathedral services, but the

opening movement is in the key and style of Walmisley's D minor service, its rich dignity including a well-managed fugato. The solo movement for soprano sounds like an extract from an oratorio or opera, even the organ parts resembling piano versions of an orchestral score; then, in the Mendelssohnian finale for solo quartet and chorus, comes the barcarolle style response to 'God shall wipe away all the tears from their eyes' – a style which has for too long elicited only jeers instead of being judged within its period.

 ARTHUR HUTCHINGS

Dykes Bower, Sir John (b Gloucester, 13 Aug 1905) English organist. His whole career was spent in cathedral work. He studied with Herbert Brewer and was organ scholar at Corpus Christi College, Cambridge, where he took the MusB degree in 1928. Successively organist and master of the choir at Truro Cathedral (1926-9), New College, Oxford (1929-33), and Durham Cathedral (1933-6), he was appointed to St Paul's Cathedral, London, in 1936, where he served for 31 years. He was one of the two sub-conductors at the coronations of George VI and Elizabeth II in Westminster Abbey, and conducted the St Paul's choir at the White House before President Eisenhower and in the Carnegie Hall during a North American tour (1953). As an organist his technique is soundly based, as two Festival Hall recitals in the 1950s demonstrated; his interpretations reflected the taste and style of his period. He instilled his high standards into students at the Royal College of Music, where he taught from 1936 to 1969, he received an honorary DMus (Oxon) in 1944 and was knighted in 1968. He was president of the Royal College of Organists, 1960-62, and Master of the Worshipful Company of Musicians, 1967-8.

STANLEY WEBB

Dylan, Bob [Zimmerman, Robert Allen] (b Duluth, Minn., 24 May 1941) American songwriter and performer. He taught himself the guitar, piano and harmonica, and formed a rock and roll band in 1955. He soon began writing lyrics and tunes, and in 1959-60, when he was at the University of Minnesota at Minneapolis, he played in coffee houses. He was greatly influenced by Woody Guthrie and his followers (e.g. Pete Seeger and Jack Elliott) and took them as models for his own music. He soon attracted notice at Gerde's Folk City, particularly with his 'talking blues' – spoken, irregular lines accompanied by simple strummed guitar chords or the harmonica (held by a neck rack). He began recording for Columbia and performed at the Newport and Monterey folk festivals and at Town Hall (12 April 1963). He sang in a distinctive speech-song style, with a harsh, nasal voice.

Dylan became a leader in synthesizing the diverse popular styles of the mid-1950s into the folksong

revival style of the 1960s. His poems and lyrics caught the mood of American youth, several of his works came to be regarded as anthems for the protest and civil rights movements, notably *Blowin' in the wind* (1962), made popular in a recording by Peter, Paul and Mary, and *The times they are a-changin'* (1964). In 1964 Dylan turned away from political songs, and the next year performed throughout the USA and in London with Joan Baez, singing in a more delicate fashion. He initiated the folk-rock style, using an electric guitar and rock-band accompaniment for the first time at the 1965 Newport Festival, where he angered many folk enthusiasts – and with his *Mr Tambourine Man* (1965; recorded by the Byrds). After a road accident in 1966, he resumed performing in 1968 (notably at the 1969 Isle of Wight Festival) with a repertory including more tranquil lyrics and country-music elements. Among his most popular songs are *Don't think twice* (1963), *It ain't me Babe* (1964), *It's all over now, Baby Blue* (1965), *Like a Rolling Stone* (1965) and *Lay, Lady, Lay* (1969). He published the *Bob Dylan Song Book* (1965) and *Writings and Drawings* (1973).

Dylecki, Mikołaj. See DII ETSKY, NIKOLAI

Dynamics. That aspect of musical expression which results from variations in the volume of the sound, either successively (as in crescendos, diminuendos or more or less sudden contrasts of *forte* and *piano*) or simultaneously (as in the balance between parts of a chord, instruments or voices in combination, etc). Dynamic variation is so natural to the performance of almost all styles of music that its presence can normally be assumed even when indications for it are mainly or even entirely absent from the notation, as appears to have been the case before the Baroque period (and still partly then) in Western music. We have therefore to distinguish between dynamic variations and dynamic markings. The fewer the markings, the greater is the responsibility of the performer for supplying the variations appropriately.

Dynamic instructions made their appearance in lute literature of the early 16th century, but remained uncommon until the 17th century, when *piano* and *forte* came into general currency in the new Italian music, as in D. Mazzocchi's *Catena d'Adone* (Venice, 1626), e.g. on p. 49, or S. Landi's *S. Alessio* (Rome, 1634), e.g. on p. 34. In the preface to Mazzocchi's *Dialoghi e sonetti* (Rome, 1638), we read that 'P.F.E.t., understood for Piano, Forte, Echo and trill, are certainly common things, known to everyone', and Mazzocchi further indicated short crescendos and diminuendos. The words 'loud' and 'soft', and the abbreviations 'lo.' and 'so.', are found occasionally in English consort MSS from quite early in the 17th century, and increasingly (especially in printed sources like Mace's *Musick's Monument*, London, 1676) thereafter. *Fort* or 'F', and *Doux* or 'D', became frequent in France with Lully's music. 'Hairpins' opening at the right for crescendo and at the left for diminuendo (but sometimes closed at the ends) are found from early in the 18th century, e.g. in Piani's Violin Sonatas (Paris, 1712) and Geminiani's Violin Sonatas (London, 1739). But Mazzocchi, in his *Dialoghi*

e sonetti, used *forte*, *piano*, *pianissimo* to indicate gradual diminuendo: this, and the reverse to indicate gradual crescendo, was common Baroque practice. Commonly, too, though not necessarily, 'f' followed shortly by 'p', or 'p' followed shortly by 'f', may show the same intentions, rather than sudden contrasts; and it is for the performer to make the right decision from the character of the music itself.

Level planes of volume are quite often implied by passages of Baroque music, but these should always be relieved by slight dynamic inflections, except on the organ or the harpsichord; these, even in their Baroque condition, cannot effect them beyond a small (but on the harpsichord by no means unappreciable) extent. Crescendos and diminuendos of unusually conspicuous range and discipline were a special effect cultivated by Stamitz and his famous orchestra at Mannheim in the middle of the 18th century, but were perhaps neither so novel nor so exceptional as legend claims and as Burney asserted (*The Present State of Music in Germany*, London, 1773, I, p.94).

Since the Baroque period, it has become increasingly the custom to indicate by notation the composer's wishes for all dynamic variations of a structural significance, while still leaving it mainly to the performer's responsibility to introduce those slighter dynamic inflections which notation should not (and beyond a certain extreme, cannot) attempt to tie down. It is natural to swell a little to high notes, and fall again from them, to stress discords before their resolutions, and in other ways to follow by dynamics the contours of the music; but good musicianship, rather than notation, must guide these passing nuances for all periods of music.

ROBERT DONINGTON

Dyson, Sir George (b Halifax, 28 May 1883; d Winchester, 28 Sept 1964). English composer and educationist. He studied at the RCM, with scholarships for the organ and composition (1900–04), and for the next four years travelled in Italy and Germany on a Mendelssohn Scholarship. On his return to England he was appointed to teaching posts successively at Osborne (1908), Marlborough (1911) and Rugby (1914). After war service he became head of music at Wellington College, joined the teaching staff of the RCM and also began lecturing and writing. His principal book, *The New Music* (Oxford, 1924), an examination of modern compositional technique, was the outcome of lectures and of essays published in *Music and Letters*.

In 1924 Dyson was made director of music at Winchester College, a post he held for 13 years. During that time he took a prominent place in local musical life as conductor of the choral society and amateur orchestra of the town, and of the annual competition festivals, where all the musical interests of the county assembled. His manner of life at Winchester was responsible for his most active period as a composer: *In Honour of the City* (1928) and *The Canterbury Pilgrims* (1931), particularly the latter, established a place for him in the programmes of English choral societies. In these works he gauged the taste of a public brought up in the oratorio tradition, a public that looked first for melodic charm and vocally conceived tunes. *The Canterbury Pilgrims* adds piquant orchestral colour to decorate the pictures of Chaucer's characters, but the work is essentially vocal, both in its attractive solo songs and its bold choral numbers.

The Hereford Festival of 1933 produced *St Paul's*

Voyage to Melita, which was successfully revived at a number of subsequent Three Choirs Festivals. Another cantata, *Nebuchadnezzar*, was produced at Worcester in 1935. This attempted, with some success, to create the sort of vivid evocation that Walton had achieved in *Belshazzar's Feast*. A third choral work of the same kind, *Quo vadis?*, was written for the Hereford Festival of 1939, at which the first part was performed, the second following ten years later. Dyson also wrote some orchestral works, of which the most considerable are the Prelude, Fantasy and Chaconne for cello and small orchestra (1936), the Symphony in G (1937), the Violin Concerto in E \flat (1942) and two concertos for strings (1949). But none of these attracted the same degree of interest as the best of the choral works. In 1938 Dyson succeeded Hugh Allen as director of the RCM, the first director to be a former scholar of the institution. He was knighted in 1941 and retired in 1952.

Dzegelyonok, Alexander Mikhaylovich (b Moscow, 24 Aug 1891; d Moscow, 31 Jan 1969) Russian composer. He graduated in piano (1914) and in composition under Koreshchenko (1918) at the Music and Drama School of the Moscow Philharmonic Society. In 1919 he founded a people's conservatory, of which he was director in 1920–21, and he taught the piano at the Moscow Technical School of Music (1926–34). He represented a 'naïve style' patterned on exotic models, as in the orchestral suite *Égypt* ('Egypt') or the Tagore songs.

DETLEF GOJOWY

Dzerzhinsky, Ivan Ivanovich (b Tambov, 9 April 1909; d Leningrad, 18 Jan 1978). Russian composer. He is exceptional in that the work for which he is mainly known, the opera *Tikhii Don* ('Quiet flows the Don', 1932-4)

later rarely performed in the Soviet Union - was successful more for its political potential than for any musical distinction. Dzerzhinsky had an extended formal training in music. After four years (1925-9) at the First Music Tekhnikum in Moscow studying the piano with Yavorsky he entered the Gnesin School as a composition pupil of Mikhail Gnesin (1929-30). He spent two further years (1930-32) at the Leningrad Central Music Tekhnikum, where he studied composition first with Gavril Popov and then with P. B. Ryazanov, before proceeding to the Leningrad Conservatory for another two years (1932-4) to study with Asaf'yev. Ryazanov and Asaf'yev were progressive in their musical outlook, and both were connected with the Association of Contemporary Music, but, from the first, Dzerzhinsky's works were strongly traditional. His early songs and piano pieces and the First Piano Concerto (1932) were influenced by Grieg, Rakhmaninov and early Ravel.

At the beginning of the 1930s Dzerzhinsky was much influenced by the music of Shostakovich (particularly in his later criticized Second Concerto of 1934), and he consulted Shostakovich in the preparation of *Quiet Flows the Don*. The libretto of the new opera, based loosely on Sholokhov's novel, was compiled by Dzerzhinsky's brother Leonid, and it was first performed at the Leningrad Maliy Theatre in October 1935. More significantly, it was seen by Stalin on 17 January 1936. Stalin at once recognized its propaganda value: its subject was heroic and patriotic, it glorified the spirit of the Don cossacks, whose support would be necessary in the event of war (which was increasingly inevitable); and its music was strongly lyrical and immediately appealing. Within weeks the work was officially pronounced the model of Soviet realism in music, and won Dzerzhinsky a Stalin Prize; simultaneously Shostakovich's *Lady Macbeth of Mtsensk*, a very much finer score and one much admired by Dzerzhinsky, was officially banned as nefarious musical chaos. The resultant success of *Quiet Flows the Don* was overwhelming.

It reached its 200th performance in May 1938; but its undistinguished idiom (it is lyrical and folklike in style, though not based on true folksong) held little potential for future musical development. Dzerzhinsky's next opera, *Podnyataya tselina* ('Virgin soil upturned', 1937), also based on Sholokhov, is dramatically tauter and similar in musical style, but it failed to repeat the sensational success of its predecessor. Indeed none of Dzerzhinsky's later operatic works has found a permanent place in the Soviet repertory. From 1936 he held important administrative posts in the Union of Soviet Composers and in party politics. In 1948 he was appointed to the central committee of the union, and at various times after 1946 he acted as a deputy to the Leningrad City Soviet.

WORKS

(selective list)

Operas: *Tikhii Don* [Quiet flows the Don] (L. Dzerzhinsky, after Sholokhov), 1932-4; *Podnyataya tselina* [Virgin soil upturned] (after Sholokhov), 1937; *Volochayevskiy dni* [Volochayevsky days], 1939; *Groza* [The storm] (after Ostrovsky), 1940, rev 1955; *Krov' naroda* [The blood of the people], 1941; *Nadezhda Svetlova*, 1942; *Knyaz' - ozero*, 1947; *Daleko ot Moskvi* [Far from Moscow], 1954; *Sud'ba cheloveka* [The fate of a man] (after Sholokhov), 1959
Musical comedies: *Zelyoniy tsekh* [The green shop], 1932; *Metel'* [The blizzard] (after Pushkin), 1946
Orch. 3 pf concs., 1932, 1934, 1945; *Povest' o partizane* [Tale about a partisan], sym. poem, 1934; *Ermak*, sym. poem, 1949; 3 Odes, Bar, orch. Petersburg, Petrograd, Leningrad
Other works: many songs and romances, choral songs, pf music, music for children, incidental music, film scores, etc.

RITA McALLISTER

Dzhudzhev, Stoyan (b Pazardzhik, 19 Dec 1902). Bulgarian ethnomusicologist. After graduating from the State Music Academy in Sofia in 1924, he continued his studies in 1927 under André Pirro, André Mazon and Antoine Meillet at the Sorbonne, where he took the doctorate in 1931; he also attended Philippe Gaubert's lectures at the Paris Conservatoire and d'Indy's at the Schola Cantorum. On his return to Bulgaria he became reader in folk music (1937) and professor (1943) at the State Music Academy in Sofia, where from 1956 to 1968 he was head of the department of musicology. Dzhudzhev has studied not only Bulgarian folk music but that of the Balkans as a whole, devoting special attention to rhythmic and metric aspects, and has delivered papers on these and related subjects at international folk-music congresses; he has also written a general introduction to acoustics.

Eames, Emma (b Shanghai, 13 Aug 1865; d New York, 13 June 1952). American soprano. After early vocal training in Boston, she became a pupil of Mathilde Marchesi in Paris, and made a brilliant début at the Opéra on 13 March 1889, with Jean de Reszke, as Gounod's Juliet: a role which (like Marguerite) she had studied with the composer. After two seasons in Paris, she made her Covent Garden début on 7 April 1891 as Marguerite. During the next decade she sang during seven London seasons as Juliet, Mireille, Charlotte, the Countess (*Figaro*), Elisabeth, Elsa, Eva, Sieglinde, Aida and Desdemona, as well as in some now forgotten new operas. Though much admired for the beauty of both her voice and her person, she had some difficulty in maintaining a London position in rivalry with Melba, and did not return after 1901. By then, having made her New York début as Juliet on 14 December 1891, she was established as a leading member of the Metropolitan Opera company, with whom she remained until 1909, gradually adding to her repertory the roles of Donna Elvira, Donna Anna, Pamina, Leonora (*Il trovatore*), Amelia (*Un ballo in maschera*), Alice (*Falstaff*), Santuzza, Tosca and Mascagni's Iris, her farewell to the house was made as Tosca on 15 February 1909. Thereafter, except for two appearances at Boston (*Tosca* and *Otello*, 18 and 22 December 1911), she confined herself to concert tours, often in conjunction with her second husband, Emilio de Gogorza.

Her voice was a lyric soprano of singularly pure and beautiful quality; she was a complete mistress of technique, with a superb trill and an exemplary legato. Although sometimes considered cold in timbre and temperament, she was nevertheless admired in such emotional roles as Tosca and Sieglinde. The best of her gramophone records (arias from *Roméo*, *Faust* and *Tosca*, a duet from *Lohengrin* with Homer, Schubert's *Gretchen am Spinnrade* and Tosti's *Dopo*) reveal considerable fullness and power as well as the expected technical perfection.

DESMOND SHAW-TAYLOR

Emma Eames as Juliet in Gounod's 'Roméo et Juliette'

Early Christian Church, music of the. See CHRISTIAN CHURCH, MUSIC OF THE EARLY.

Early Latin secular song. A repertory which, largely because of the nature of poetic transmission in the Middle Ages, comprises much of the earliest surviving European secular song with music. In contrast to the many collections of liturgical chant and Latin sacred songs surviving from the millennium before about 1300, Latin secular songs with music are very rare; but secular poems that were probably sung are more plentiful. Of the songs preserved with music, very few notated before the 12th century can be transcribed with any certainty.

1 Late antiquity 2 The Carolingian renaissance 3 The goliard period up to c1300

1. LATE ANTIQUITY. From the time of the late Caesars solo song, dance and music for cithara and lyre accompanied tragedies and pantomimes; other references indicate that the common people would 'sing and dance in the forum', and many old musical traditions prevailed throughout the first six centuries of the Christian era, though modified by barbarian invasions and rapidly changing political and social conditions. Christian teaching gradually prevailed over this pagan background, so that by late antiquity the early Church Fathers had considerably curtailed the use of pagan songs, at least among Christians. A new tradition began, issuing from the lyrical hymns and secular songs of such writers as Hilary of Poitiers (300–68), Ambrose (c333–97), Prudentius (348–410), Sidonius Apollinaris (c430–79) and Venantius Fortunatus (540–c600). They used simple metres in strophic form, and gradually introduced rhymed couplets, as the quantitative scansion of classical Latin was superseded by a more popular rhymed structure. Other Latin secular songs are found in the mixed prose-verse forms of Martianus Capella (early 5th century) and Boethius (c480–524). Even by the 8th century the cloister schools had not completely renounced secular song, and learned songs as well as those of a popular nature were studied despite Synod admonitions against 'base, over-exuberant, obscene and sacrilegious songs'. From this whole body of secular songs, stretching over some 500 years, no melody has been preserved.

2 THE CAROLINGIAN RENAISSANCE. The 8th and 9th centuries produced many sung Latin poems, not only sacred, but also epics, odes, laments, satires, eulogies, and lyric and didactic verses, yet a predilection for classical studies restricted the use of rhymed rhythmic verse, and might even have stifled it altogether had not a close association with music in the following two centuries given it new vigour. Meanwhile poetico-musical activity continued in the monasteries of southern France and northern Italy, an important outcome of which was the development of refrain forms and the addition of partly diastematic neumes to the texts in the manuscripts. The revival of classical studies resulted in a number of contemporary musical settings of ancient authors. Neumes survive for six Horace odes (i, 1, 3, 33, iii, 9, 13; iv, 11); two extracts from Virgil's *Aeneid* (ii, 281ff; iv, 651ff); three extracts from Statius's *Thebais* (v, 608ff; xii, 325ff, 336ff); Juvenal's *Satires* (viii, 78ff); Trajan's *Ut belli sonuere*, Priscian's *Ad Boree partes*; *Scande celi* from Martianus Capella's *De nuptiis Philologiae et Mercurii* (ii); and five poems from Boethius's *De consolazione Philosophiae* (metrum i, 1, 5, ii, 5, iii, 8; iv, 7). It is possible that these simple settings were used for didactic purposes, one of the two tunes (Horace, *Ode*, iv, 11) that can reliably be transcribed is set to the version of the hymn tune *Ut queant laxis*, which was later adapted to didactic use by Guido of Arezzo, and the other (Boethius, *metrum* iv, 7) occurs in Odo's *Dialogus de musica* (see ex.1).

Several contemporary laments and eulogies from the 9th century are transmitted in partially heighthed neumes

in a manuscript probably from Toulouse or Narbonne (*F-Pn* lat.1154). Subjects treated are the death of Duke Eric of Frioul (799) by Paulinus of Aquileia, laments for Charlemagne (814) and his son Hugh of St Quentin (844), the Battle of Fontenoy (841) and the exile of Gottschalk (c840). Although they cannot be transcribed melodically, the neumes indicate simple melodies with occasional small melismas of two to four notes; the poems are set strophically, and two of them have refrains. Scattered remains of Latin secular songs with unheighted neumes are extant from many areas of Europe. These include laments from Spain (7th–10th centuries); a lament on the destruction of the monastery of Glonnes, near Saumur (850); festival songs and greetings, for Odo's coronation (888), Charles the Thick (883) and Konrad I (912); a song for the watchers of the walls of Modena (after 892); a song by Leo of Vercelli praising Gregory V and Otto III (998); and a song by Azelm of Rheims praising Henry III (c1050). Certain songs were designated by the term 'Modus': 'Modus florum' (flowers), 'Modus libinc' (love), 'Modus qui et Carelmanninc' (Charlemagne). Unfortunately these are all without music; but one has the first of its six sequence-like strains set with neumes: the 'Modus Ottinc', in honour of Otto III (983–1002). Another interesting specimen is the 'Galluslied', written in Old German by Radpert, at St Gall towards the end of the 9th century; in the 11th century Ekkehard IV translated it into Latin 'lest such a sweet melody be lost from memory'; the neumes in *CH-SGs* 393 suggest a song with a structure of varied phrase repetition.

In a few secular Latin songs the use of an alphabetical notation allows accurate melodic transcription. The best known of these is the 10th-century song *O Roma nobilis* and its erotic contrafactum (*O admirabile Veneris vdolum*), a simple strophic and syllabic tune of a non-ecclesiastical character (*modus lascivus*). Of two 10th-century songs to celebrate the nightingale, one is notated in unheighted neumes (*Sum noctis socia*), whereas the other, *Aurea personet lyra* (ed in Ludwig), is in alphabetical notation; its form and melody are characteristic of the sequence. A final group of these songs consists of a lament by Guido of Luxeuil *Hactenus tetendi liram*, a short didactic poem *Hic poterit solers ignotum discere cantum* (a following eclogue on music and a song of the nine Muses unfortunately lack notation) and Guido's famous distinction *Musorum et cantorum magna est distantia*.

A didactic purpose lies behind a number of melodies which accompany 10th- to 13th-century *computus* verses, which link the liberal arts studies of music and astronomy within the doctrine of the music of the spheres. Some of their melodies are in lined notation, and show a recitation style with some melodic emphasis at the cadences. A few are strophic, though generally they are through-composed, and some of them are of great length. The opening of a 12th-century German example (ex.2) illustrates the style.

3. THE GOLIARD PERIOD UP TO c1300. A last great flowering of Latin secular song follows the period of Carolingian court songs. It issues principally from two interrelated sources: the monasteries of southern France and the goliards or wandering scholars, clerics in minor orders who by the early 13th century had established a university community at Paris. On the one hand, there occurred unparalleled activity in creating new paraliturgical and sacred musical works – tropes, sequences, conductus and motets; on the other hand, songs of a similar kind, but with secular texts – love-lyrics, spring songs, moral, satirical and drinking-songs – were written and preserved in great numbers. From the extant sources it is possible to trace the development of these forms from the 10th century to their highest point in the 12th century and through their gradual decline during the 13th century. The earlier period established the principle of rhymed, rhythmic and strophic verse meant for singing. During the ensuing development poetic rhyme, poetic structure and musical balance coalesced into free forms suggesting increased attention to detail and formal design. Besides sacred music, two further developments strongly influenced secular Latin songs: the vernacular chansons of the troubadours and trouvères and the great popularity of Marian settings, the texts of which varied from poetic fancy rich in imagery and Old Testament exegesis to the most facile stringing together of Our Lady's attributes. The music tended to be less learned and of a popular cast. Owing to the close interaction of these various elements it is often very difficult to separate secular from sacred; and the common use of contrafactum texts tends to obscure the distinction even further. Whereas vernacular song tended to become localized, the Latin tradition became truly international, and many songs are found separately transmitted in manuscripts from all over Europe.

A change of poetic-musical emphasis can be observed in several transitional 10th-century works which, though belonging to the older Carolingian tradition, point decisively to a new emphasis on lyricism. Ex.3

Ex 3

1 Phe bi cla ro non dum or to in ba te

4 l'al - ba part u - met mar 5 a - tra sol po - pus

(late 10th century) illustrates this trend and indicates the close connection between Latin and vernacular traditions, which in this dawn song with Latin stanza and Provençal refrain also indicates a clerical origin.

Both texts and music of the goliard songs display a wide range of expression and musical forms. The poetry is often characterized by verbal charm and simplicity though framed in sophisticated verse forms enhanced by an interplay of rhymes and rhythms, while intricate word play is common. The scurrilous songs display a penetrating understanding of the social and religious structure of the times, so that a carefree and abandoned attitude, often supremely witty and apposite, attacks by implication all that established tradition held to be sacrosanct, while directing trenchant satire and bitter polemic against official abuses. Charming and graceful

lyrics that evoke tender or erotic feelings are also common. Similarly, the melodies range from simple strophic settings to highly complex and melismatic through-composed forms; the latter style is illustrated by the opening of an early 13th-century *planctus* (ex.4).

Ex 4

Many fragmentary sources and several large collections of songs are extant from the final period; taken together they present a remarkable and diverse picture of late Latin secular song. The main features of the repertory may be traced by reference to the songs in the larger collections. The earliest of these is an 11th-century manuscript known as 'The Cambridge Songs' (GB-Cu Gg.v.35), which contains some songs from the previous century (such as *O admirabile Veneris ydolum* and the 'Modus Ottine' already referred to) and bridges the late Carolingian period and the newer trends of the goliard poets. It is significant that many of the pieces are in sequence form, and that this is the first extensive collection of secular texts that are unequivocally connected with musical settings. Also, these and the following profane Latin songs are products of a learned society and, though influenced by common folk stories and Latin colloquialisms, they would not have been understood by the common people. A most diverse collection of sacred music, proses, tropes and conductus, is contained in the four principal St Martial manuscripts (see ST MARTIAL); among them are some 14 wholly secular works, and others that belong to that indeterminate position between sacred and secular. They are mostly strophic in form, and show the influence of vernacular and sequence forms by frequently having a formal repeat of the first strain, while many continue with further repeated strains. Melismas and melodic ornaments are also commonly used, indicating a movement away from older melodic patterns of simple recitative style for Latin secular songs, so that now beauty of melodic form gains emphasis. Two further collections of secular songs mixed with sacred, from a slightly later period, continue the tradition there established: the 28 'Arundel Songs' (GB-Lhm Arundel 384) lack notation, and only one or two melodies can be recovered from concordances; in a second Cambridge collection (GB-Cu Ff.i.17) of 35 songs, all have staves, but some lack notation. Here we enter the mature period of songs with rhymed rhythmic Latin verse.

The largest and most important collection of goliard songs is the *Carmina burana* (D-Mbs Clm 4660) from south-west Germany. Some 46 of its poems are provided with unheighted neumes, and one must look to concordances to decipher the melodies, about 30 of which have been recovered with some certainty. Closely related to this tradition are many Latin CONDUCTUS, lyric songs and rondeaux of the Notre Dame sources. Written in excellent notation, they form the last great repository of medieval moral and secular songs. It would appear that with this collection the centre of activity shifted to Paris, that with the establishment of

the university in the early 13th century the goliard fraternity was replaced by resident teachers and scholars, and that from this point secular Latin song quickly waned.

GORDON A. ANDERSON

Early Music Consort of London. A group formed by DAVID MUNROW in 1967

Earsden, John (fl 1618) English composer. All that is known of him is that he collaborated with GEORGE MASON in writing *The Ayres that were sung and played at Brougham Castle in Westmerland, in the Kings Entertainment* (London, 1618). It has been suggested that Earsden was responsible only for the last song in the book, since it is placed out of its proper sequence in the entertainment, and it seems certain that George Mason was the dominant partner in the production.

DIANA POULTON

Easdale, Brian (b Manchester, 10 Aug 1909). English composer. He was educated at the Westminster Abbey Choir School and at the Royal College of Music, London. He wrote his first opera, *Rapunzel*, at the age of 18, and when he was 27 his Five Pieces for orchestra were given in Vienna; his Piano Concerto was broadcast in 1937. In 1936 he began composing for documentaries, and from 1937 to 1949 he was musical director for various theatre and film organizations in England and India. In 1948 he composed his best-known work, the score for the film *The Red Shoes*, a Powell-Pressburger production about the gestation and birth of a ballet, with choreography by Helpmann. Easdale wrote music for a number of other films but never again attained the same renown. In 1962 he wrote the *Missa*

coventrensis for choir, congregation and organ, for the consecration of Coventry Cathedral. His compositions, mostly in an eclectic English idiom that owes something to Britten as well as to the Bax-Bridge generation, include operas, chamber music and songs.

CHRISTOPHER PALMER

East [Easte, Est, Este], **Michael** (b c1580; d Lichfield, 1648). English composer. He was previously thought to be the son of the music printer THOMAS EAST, but the latter's recently discovered will does not mention him. Its reference to a 'Coson Pearson dwelinge in Mynual [?Mildenhall] nere Elie', a place with which the composer was associated, hints remotely at a more distant relationship between the two men. Michael's name first appears as a contributor to Morley's *Triumphes of Oriana* (1601), and because of its late arrival his piece was printed on the preliminary pages. In 1606 he received the MusB degree from Cambridge; his second set of books, published in the same year, is addressed 'from Ely House Holborne'. It is possible that at this time he served the Dowager Lady Hatton, who occupied part of this London palace of the Bishops of Ely – the dedication of the last set of 1638 to Sir Christopher Hatton argues a connection with the family. Alternatively, the composer may already have been employed at Ely Cathedral, where the account books contain references to him as a lay clerk between 1609 and 1614. Sometime before 1618 he moved to Lichfield, for on the title-page of the fourth set he is entitled 'Master of Choristers in the Cathedrall Church'. The antiquary Elias Ashmole (1617-92) referred to him as 'my Tutor for Song' and made it clear he was not also organist of the cathedral by mentioning Henry Hinde as holder of that post. In 1620 St John's College, Oxford, commissioned East at a fee of 44s to write an 'anthem of St. John' (*As they departed*), which he apparently visited Oxford to hear; it was later published in his sixth set of books, dedicated to John Williams, Bishop of Lincoln, in gratitude for an annuity he gave East after hearing 'some Motets' (i.e. probably anthems) of his. East's will (PCC 77 Essex), dated 7 January 1648, informs us that he lived in the Cathedral Close, that his wife Dorothy and daughter Mary Hamersly were both alive, and that he had a son and a grandson (aged two) both called Michael. The will was proved on 9 May 1648.

East was unusually fortunate in having so much of his work published. His seven sets of books, though containing little of musical importance, are a valuable guide to the changing musical tastes of early 17th-century England. The first two sets, issued in the heyday of the madrigal, are thoroughly Italianate in style and content. The third and fourth sets, however, place consort songs and anthems side by side with genuine madrigals and canzonets, and the third set even includes an extended sequence of viol fancies. 20 three-part pieces for viols are the sole contents of the fifth set. The naming of the partbooks Cantus, Quintus and Bassus, the designation 'Songs . . . as apt for Vyols as Voyces', and the titles of the pieces have suggested to some writers that these were originally five-part madrigals adapted to take advantage of the growing demand for instrumental music, but there is no evidence of a reduction of parts (Cantus and Quintus indicating two equal voices), the opening point often cannot be made to fit the words of the title, and in any case the entitling of fancies goes

back to the days of Tye, as does the singing of wordless compositions. Pieces of the same kind are also found in the seventh set, which again is entirely instrumental.

The sixth book is devoted completely to sacred compositions, with the exception of a consort-song setting of Sir Henry Wootton's poem in honour of Princess Elizabeth, daughter of James I. *Awake and stand up* is the only full anthem, the rest being sacred consort songs or verse anthems, several of which were adapted for church use by the substitution of organ for viol accompaniment. Earlier versions of two of East's consort anthems (*When Israel and O clap your hands*) exist in GB-T 1162-7 together with an interesting version of the pastoral *Sweet Muses* (third set) to the Italian words *Cantate, ninfe e pastori*.

East was one of those industrious but unoriginal composers who cultivated an up-to-date style without ever developing an individual musical personality. He took more texts from earlier madrigal sets and from the Elizabethan Italian anthologies than any other English madrigalist. Nor was his borrowing confined to words: he often quoted a whole phrase or more of music, and not infrequently based an entire composition on a previous setting (e.g. his praiseworthy sacred madrigal, *When David heard*, modelled on Weelkes). But where he no doubt intended to emulate, he often became merely derivative. His style was formed during the height of the madrigalian period, and he embraced the Italianate idiom wholeheartedly. Unlike so many of the greater English madrigalists, he avoided the traditional native style even when writing consort songs and anthems. His sacred compositions, which may be compared with those of Ward, Ravenscroft and Amner, consequently tend to be more colourful (though no less prolix) than minor works in the orthodox Jacobean Anglican style – confirming the impression that he generally wrote in the first instance for the chamber, not the church. As an instrumental composer, East suffered from the lack of genuine contrapuntal ability, and from a tendency to cke out his short-winded ideas by frequent recourse to cadential patterns. An exception must be made, however, of the five-part fancies in the third set. Forming a unified cycle on the theme of the sinner's (?lover's) progress from despair through penitence to eternal bliss, these ambitious pieces fully deserve Thurston Dart's commendation: 'despite some slipshod part-writing, they are among the best five-part consorts of the time'

PRINTED

Hence, stars, too dim of light, 5vv, in *The Triumphes of Oriana* (London, 1601), ed E H Fellowes, rev T Dart, EM, xxxii (London, 1962)

Madrigales to 3 4 and 5. Parts apt for Viols and Voices (London, 1604), ed. E H Fellowes, rev T Dart, EM, xxix (London, 1960)

3vv Alas, must I run away, In an evening, In the merry month of May, O come againe, my love; O doe not run away, To bed, to bed, she calls, Young Cupid hath proclaim'd

4vv In vaine, my tongue, Joy of my life, Mopsie, leave off to love, My hope a counsel, Pittie, deere love, O stay, faire cruel, Sweet love, I erre, When on my deare I doe demaund

5vv All yee that joy in wayling, Faire is my love, My prime of youth, Shee theefe, if so you will believee, Yee restless cares, You mournfull gods

The Second Set of Madrigales to 3 4. 5. Parts apt for Viols and Voices (London, 1606), ed E H Fellowes, rev T Dart and P. Brett, EM, xxx (London, 1961)

3vv Follow me, sweet love, How merely wee live, I doe not love my Phillis; Round about I follow thee, See Amarillis shamed, Why smilest thou?

4vv Farewell, false love; In dolorus complaining, So much to give, Sound out, my voice, Why runs away my love?

5vv Deere, why doe you joy; Hence, starres to dim of light [a

reworking of the Oriana madrigal]; I fall and then I rise againe, Now Cloris laughs; O metefiscall tobacco; What doth my pretty darling?, Why smilest thou?

The Third Set of Bookes: wherein are Pastorals, Anthemes, Neapolitanes, Fancies, and Madrigales, to 5 and 6 Parts apt both for Viols and Voyces (London, 1610), ed. E H Fellowes, rev T Dart, P Brett and A. Vlasto, EM, xxxiA (London, 1962)

5vv Come hie, come death (Neapolitan); Sweet Muses (pastoral consort song), When Israel came out of Egypt (verse anthem)

8 fancies Desperavi, Peccavi, Vidi, Penitet, Credidi, Vixi, Triumphavi, Amavi

6vv Dainty white pearle (Neapolitan), Life, tell me (madrigal), I o, here I leave my heart (madrigal); Now must I part (madrigal), Poor is the life that misses (Neapolitan); Say, decree, when will you your frowning leave? (madrigal), Turn thy face from my wickednesse (verse anthem)

The Fourth Set of Bookes, wherein are Anthemes for Versus and Chorus, Madrigals and Songs of other Kindes, to 4 5 and 6 Parts apt for Viols and Voyces (London, 1618), ed E H Fellowes, rev T Dart and P. Brett, EM, xxxiB (London, 1962)

4vv Deere love, be not unkind, Farewell, sweet woods and moun taines, I did wooe her, Thirsis, Thirsis, sleepest thou?; When as I glance, When I lament, Why are our sommer sports so brittle?, Your shining eyes and goulden haire

5vv Come, shepherd swaines (consort song), Fair Daphne, gentle shepherdesse (consort song), I heard three virgins, O clap your hands (verse anthem), O Lord, of whom I doe depend (verse anthem), To heare men sing

6vv Flye away, care, Hast thee, O God (verse anthem), Quicke quicke, away dispatch, Weep not, deere love, When David heard that Absalom was slaine, Your shining eyes and goulden haire [a resetting of the 4vv version]

The Fifth Set of Bookes, wherein are Songs full of Spirit and Delight So Composed in 3 Parts, that they are as apt for Voyles as Voyces [without text] (London, 1618), ed D. Goldstein (Provincetown Mass., n.d.)

And I as well as thou, Come, lets be gone, Do what you can, I car not the end, Fly not away, I cannot stay, I vely, my hearts, I love is a toy, Mourning I dye, My lovely Phillis, My time is spent, No hast but good, Smooth and soft, Softly for falling, Stay yet a while, Sweet lady, stay, Trip it lightly, Turne round about, What art thou?, White as lillies

The Sixth Set of Bookes, wherein are Anthemes for Versus and Chorus of 5 and 6 Parts apt for Viols and Voyces (London, 1624), ed I. F. Rimbault, Musical Antiquarian Society Publications (London 1845) [also includes anthems from the third and fourth sets]

5vv As they departed, Blow out the trumpet, I have roared, You meane beauties (in honour of Princess Elizabeth, edn in EM, xxxi)

6vv Awake and stand up, How shall a young man cleanse his waies?, I have had as great delight Sing we merrily to God

The Seventh Set of Bookes, wherein are Duos for Two Base Viols, also Fancies of 3 Parts for Two Treble Viols, and a Base Viol, so Made, as they must be Plaid and not Sung. Lastly, Ayerie Fancies of 4 Parts, that may be as well Sung as Plaid [without text] (London, 1638)

Duos Both alike, Dally not with this, Draw out the end, I follow me close, Hold right, I as well as thou (edn in MB, ix), Love cannot dissemble, Ut re mi fa sol la

Fancies of 3 parts Calliope, Cleio, Erato, Futerpe, Melpomene Polyhymnia, Terpsicore, Thaleia, Urania

Fancies of 4 parts A[l]re the first, A[l]re the second, A[l]re the third, Name right your notes, Not over long, Play not too fast, Sing this as that, Softly at last, Some alteration, Somewhat short, The last but one, This and no more

PHILIP BRITT

East [Easte, Este], Thomas (d London, 1608). English music printer and publisher. There is no evidence to support the theory that one of the variant spellings of his name, 'Este', might indicate Italian origin. He was made free of the Company of Stationers in 1565, but during the early part of his career he was not particularly prosperous. He was one of those who signed 'The complaint of the poor printers', a list of grievances sent to Lord Burghley in about 1577, protesting against the number of printing monopolies. He acquired a fount of music on the death of Vautrollier and printed a work under the music printing monopoly that had been granted by Queen Elizabeth I to Tallis and Byrd in 1575. The monopoly had fallen into disuse through the commercial failure of *Cantiones sacrae* (1578), but East's 1588 volume, Byrd's *Psalmes, Sonets and Songs*, apparently had an immediate success. Byrd thought highly of East's work; the volume was reprinted the following year, and from then until his death East flourished as a music printer (he also continued to print non-musical material) and printed most of the music of Byrd and Morley, as well as *Musica transalpina* (1588 and 1597) and *The Triumphes of Oriana* (1601). In 1600 he printed John Dowland's *Second Booke of Songs or Ayres*, and later Francis Pilkington's *First Booke of Songs or Ayres* (1605) and John Danyel's *Songs for the Lute Viol and Voice* (1606). In 1598 he

printed Lassus's *Novae cantiones*, the first Italian music by one composer printed in England, and he appears to have had plans to export English music to Italy, for in 1595 he printed two editions of Morley's five-part ballets, one in English, *The First Booke of Balletts to Five Voyces*, and the other in Italian, *Il primo libro delle ballette a cinque voci*. No evidence survives to indicate whether the venture was successful, but there is no comparable instance in East's or any other contemporary music printer's output. In 1592 East produced a version of the English metrical Psalter, entitled *The Whole Booke of Psalmes, with their Wonted Tunes, as they are Sung in Churches*, which includes settings by Giles Farnaby, Richard Alison, Michael Cavendish and John Dowland. East wrote the preface and dedication himself. It ran into two further editions during his lifetime and four after his death, after Thomas Ravenscroft's edition of it in 1611, 'newly corrected and enlarged', it became known as Ravenscroft's Psalter.

East's success was hard-won: he was continually bedevilled with lawsuits and for most of his career was obliged to work as someone else's 'assigne', a system which must certainly have cut into his profits and not offset his losses. When Morley renewed the music printing monopoly in 1598, East was one of the printers who suffered, and it was over a year before he could print music again. The monopoly was resurrected by William Barley in 1606, on the grounds that he had been Morley's business partner, and the terms under which the resulting lawsuit was settled were hardly favourable to East. In 1606 he was in dispute with George Eastland, the publisher of John Dowland's *Second Booke of Songs*, and the resulting lawsuit lasted for two years before the case against him was dismissed.

East was the leading music printer of his day, and may be considered the father of English music printing. He took a serious risk in printing music when the market was very uncertain, and he clearly was not easily discouraged by the vicissitudes of a music printer's life. He possessed two founts of music type and one of tablature type, together with a group of distinctive ornaments, one of these, a black horse with a crescent on the shoulder, is a pun on his address, 'Aldersgate street at the sign of the Blacke Horse', where all his music was printed. At his death his business passed to THOMAS SNODHAM, his adopted son. He was generally supposed to have been related to Michael East, but his will (in *GB-Lgc*) makes no mention of him.

East Asia. East Asian music culture is the dominant (but not exclusive) tradition of that part of Asia which has China in the centre. Mongolia, Manchuria and Korea in the north, Japan in the east, and Tibet in the south, and of various enclaves in south-east Asia of which

Vietnam is the best documented. This survey does not include the Western aspects of the tradition in central Asia nor the Sino-Indian mixtures with indigenous materials found in Tibet, other Himalayan states and in Burma. It seeks to point out only those distinctive aspects of music that seem to be applicable to east Asian music in general: there are of course many qualifications and even contradictions that might be offered for any such generalization when it is viewed in the context of a vast cultural area that encompasses many different regional styles and is also richly documented historically.

1 Aesthetics 2 Theory and early sources 3 Teaching 4 Social role of the musician 5 Characteristic genres and performing practice 6 The 20th century

1. AESTHETICS. As the scholarly study of world music expanded and matured in the 20th century many researchers came to feel strongly that there was an intimate connection between a culture's most fundamental 'world view' or philosophy and its musical theories and aesthetics. It is not yet possible to summarize such links for the entire area of east Asia, but a few preliminary observations may be made.

Perhaps the most obvious common feature of east Asian aesthetics which can be related to musical factors is its special respect for and love of nature. One musical reflection of this attitude is a general lack of emphasis on abstract instrumental music. Although in most east Asian cultures at least one form of purely instrumental music is found, such as the zither genre of *sanjo* in Korea (see KOREA, §9, ii) or *danmono* in Japan (see JAPAN, §IV, 2, iii), most other instrumental pieces have titles which represent physical environments (for example a river, mountain or forest) or a mystical experience with reference to natural phenomena (like a bird, the moon or the wind). Human actions are represented (such as cutting wood, getting drunk or fighting) but, except in dance accompaniments, tend to have extra-musical connotations. Explanatory texts can be found alongside some instrumental notation, not just to make actions or natural references more pictorial but also to clarify the philosophical meaning of the melody. Vocal music is the most frequent musical type found in east Asia and its texts often deal more directly with human emotions, but even these vital topics are often set in scenic imagery.

A subtler relation between east Asian views of nature and its music is revealed by the fact that most east Asian thought places man in a passive relationship to nature. Man does not shape nature to his will but rather places himself in a geographic location conducive to a beautiful experience, and when he must change the design of natural objects he does so in such a way that the new form looks 'natural'. This attitude may be one of the reasons why in many east Asian musical genres the large repertory seems to lack 'originality'. The cult of the composer, the innovator and the avant garde predominant in 19th- and 20th-century Western music is strikingly absent in east Asia. The names of composers and dates of first performances are often known but in place of innovation one seems to find repetition many times over. The beauty of east Asian music, however, is often judged not by what is new but rather by the artistry and skill with which a maximum effect is generated from a deliberately restricted amount of generally familiar material. The listener, unencumbered by a struggle with new sounds, is able to concentrate on the

deeper structures and beauty of the music. Such an artisan's approach to composition and to listening bears some slight analogy to the functional context of Bach or Mozart in Western classical music or perhaps to blues and bluegrass music in the 20th century (the beauty of a good minuet or a 12-bar blues is enhanced by the fact that so much must be the 'same thing').

In east Asian music a willingness to accept sameness seems all-pervasive. This results in an extensive use of stereotyped patterns, particularly of a melodic or rhythmic nature. The subtlety with which such materials can be manipulated may be one reason why east Asian musicians have seldom shown any great interest in clouding the texture of music with thick vertical chord sounds. It also may contribute to the preference for a transparent chamber music texture even in the larger east Asian ensembles. The difference in the timbre of each instrument keeps the music from merging in an orchestral sense and thereby enhances its linear rather than vertical emphasis. In a music culture as large as that of east Asia there are, of course, many blatantly loud and fast genres but it is in the quieter classical traditions that certain characteristic aesthetic principles are discernible.

2 THEORY AND EARLY SOURCES. The earliest sources dealing with east Asian music share with those of other ancient civilizations a concern for the extra-musical implications of sonic events. Numerology, astrology and time cycles were linked to tonal systems with great skill and imagination. In east Asia pentatonic scales were connected with the five elements or directions, and the 12 pitches of the basic tonal system related to the months, hours or phases of the moon and divided into two six-note groups in conjunction with the female/male (yin and yang) or earth/heaven bifurcations of east Asian thought. Until the mid-20th century, Westerners tended to view these arrangements of music theory more as intellectual exercises than as acoustical and aesthetic insights. Since then, however, deeper Western consideration of all the world's musics (including that of the West itself) has seemed to reinforce the ancient theory that music does, in fact, have powers that transcend its purely sonic surface, and may even be part of a larger logical system, be it cultural or cosmic. The importance of music's convergence with socio-psychological needs in a given culture has already become acceptable ethnologically to many modern minds; the requirement that it be 'in tune' with the universe has become at least open to serious reconsideration.

The earliest east Asian written sources are found in documents concerning ritual and magic from the Chou dynasty (1050-255 BC) but the first extensive discussions of music theory are preserved in the *Yueh-chi* ('Annotation of music'), *Li-chi* ('Collection of rituals') and *I-ching* ('Book of changes'). These books are part of the Confucian 'classics', compiled in the 2nd century BC, which at one time had a separate volume devoted solely to music (the *Yueh-ching*). Though that book is completely lost, the tradition of discussing music in terms of acoustics, rituals and aesthetics remained an essential part of most imperial cultures of east Asia until modern times. Attempts to reconstruct traditions of earlier times are also common, the best-known example being the *Chou-li* ('Rite of Chou') which appeared in the Chinese Han dynasty (206 BC-AD 220). For all the musical richness of the T'ang dynasty (AD 618-907) its

direct written sources are rare, though the tradition was imported into Japan by a Japanese ambassador, Kibi Maki, in 735 in the ten-volume *Yüeh-shu yao-lu* ('Digest of musical matters': the Japanese *Gakusho yōroku*).

Most information about east Asian music theory and practice comes from sources that begin with writings from the Sung dynasty (960–1279) and proceed with annals of later Chinese, Korean, Vietnamese and other regional courts. The great Chinese volumes *Sung-shu* ('Sung history') and *Yu-hai* ('Jade sea' encyclopedia) were first printed only in the 14th century but they contain a treasury of information about earlier musical practice. In the same century the *Annam chi lüoc* by Lê Tac tells of the Vietnamese interpretation of Chinese musical ideals while 15th-century publications in Korea such as the *Aak Po* ('Treatise on ceremonial music', 1430, in the annals of the Sejong dynasty) and the *Khak kwehôn* ('Handbook of music', 1493) reflect the entire east Asian court musical tradition of the times. Japanese variants on the tradition are found in the 10-volume *Kyōkunshō*, compiled by a court dancer, Kōma Chikazane, in 1233 and carried on through his grandson, Kōma Asakuzu (b. 1277) in the *Zokuyōkunshō*. The *Taigenshō* (Compendium of gagaku) of 1512 was written by a Japanese imperial musician, Toyohara no Sumaki, in an attempt to pass on to future generations the Japanese version of the east Asian ancient tradition as seen in a period of decline. From the 16th century the major sources of east Asia tend to deal with specific regional musics, but the marginal survival of the Chinese-inspired musics themselves is found in rare living traditions as disparate as those of Vietnam, Korea, Manchuria and Japan. Such performing groups are of great value in the interpretation of many east Asian written sources. All these written and performing sources, when combined with a large number of similar materials dealing with Buddhist and other religious chant, provide a proper basis for an understanding of general east Asian music theory.

The music of specific areas such as China, Korea, Japan or Vietnam shares a theoretical tonal system that is based on 12 pitches generated in a cycle of 5ths and symbolized by a series of end-blown, stopped pipes. Though mathematics and sophisticated acoustical science had much to do with the founding and development of the system, the traditional basis of east Asian music theory is called the 'overblown 5ths' method in the West. In this system one pipe is built to produce a fundamental pitch and then is overblown to generate a pitch an octave and a 5th higher. This new pitch is matched an octave lower by building a pipe one third shorter than the first pipe: another pipe one third longer than the second pipe produces in turn a pitch a perfect 4th below it. This alternation of pipe size reproduces a sequence of pitches up a 5th and down a 4th (like C–G–D–A–E) which is equivalent to different octave forms of the pitches that the overblowing of each pipe would create, whence the European name for the system.

Each east Asian culture has produced a set of theoretical scales based on a tonal vocabulary of 12 notes derived from the cycle of 5ths. These scales generally consist of a pentatonic core (in Chinese *wu-sheng*) often with two alternative pitches (in Chinese *pien-sheng*), which create then a seven-note scale. In the whole repertory of east Asian music from folk forms to music for imperial orchestras there is, of course, music based on scales consisting of only two pitches or music that is

bitonal, but the pentatonic core remains basic. In actual practice (as in the West) a considerable number of 'illegal' pitches are used. These unnotated differences in intonation and vocabulary may in fact help to distinguish one east Asian music system from another. Even the regional versions of east Asian classical music theories, however, show distinctive variations from the central Chinese form. The selected examples shown in ex. 1 and additional scales appearing in related articles illustrate this point. If alternative pitches appear in regional theory books they are shown in parentheses. While the names of various scales and pitches are often different, they are normally written with the same traditional Chinese character when shown in that form.

When studying east Asian scales written in Western notation two points should be borne in mind: a scale is an abstraction of interval relations of selected notes, and the actual pitch upon which a scale may be built is relative (as, for example, a Westerner may say C major or E♭ major); and Western notation cannot accurately represent the actual pitch of any notes other than those of the tempered scale, which is not typical of east Asian music. Chu Tsai-yü, a scholar of the Ming dynasty (1368–1644), did in fact extrapolate a tempered scale for China as early as 1584 in his *Lu hsüeh hsin shuo*, but it was not adopted in east Asia except in later Western-style music. Thus, the selected examples must be considered as visual aids rather than sonic abstractions.

Ex. 1 East Asian theoretical scales

(a) Korean *mo* and Vietnamese *hau*

(b) Chinese basic scale and Japanese *yo*

(c) Japanese *yo*

(d) Korean *yo*

(e) Japanese *yo*

(f) Japanese *yo*

(g) Japanese *yo*

Pentatonicism is evident in these few east Asian examples, as are some of the varieties of regional differences. A study of the actual music performed in local traditions is, of course, the best way to understand the

musical meanings of the core pitches and the manner in which the substitutes may appear. Such study would also reveal rather different approaches to the meaning of the Chinese character which is pronounced *tiao* in Chinese, *chō* in Japanese, *jo* in Korean and *diêu* in Vietnamese. Differences in pronunciation are only a small part of the distinctions made in the uses of the term in east Asia. In the Chinese and Korean classical traditions (i.e. before the 17th century) the term seems to be connected with the name of a pitch upon which to build a scale. In this context the translation 'tonality' has been suggested rather than mode. From the few examples of Japanese ancient music (*gagaku*) that are found in more than one *chō*, the term seems often to imply not only a change of tonality but also the placing of the melody on a new pitch within the different tonality; in other words, a *chō* was not only a modulation but at the same time it was the use of a different mode within the 'key'. The very strong pentatonic nature of Vietnamese music led some scholars to translate the term *diêu* with the French word *métaphore* which means, among other things, a mode system limited to the original five notes. One does not change the pitches used but rather realigns the five pitches in terms of emphasis, creating a sense of a new pitch centre, for example, if a piece in the *bac* scale (shown in ex.1) began with a tonal centre of C and later concentrated instead on F, that would be considered a *métaphore*.

These examples show how varied east Asian traditions can be while still being considered part of the same theoretical family. Thus, though the writings on music theory in east Asia have a clear common element deriving from the acoustical discoveries of ancient China, indigenous taste and ingenuity must always be kept in mind when speaking of east Asian music with any implication of its unity.

3. TEACHING. In its traditional instruction of music east Asia presents a greater unity than in its music theory. Music lessons use rote methods which allow the student to concentrate on the sounds of the music and the technical skills of the instrument as directly as possible. This interest is reflected in a general lack of concern in east Asia for graphic notational abstractions, except as memory aids for something already learnt (see JAPAN, §V). For the same reason most instrumental lessons and notations, if they exist, contain mnemonics which are based on the actual sounds of the particular instrument for which they are designed. The avoidance of too specific a notation in the teaching of music not only helps to impart nuance through aural rather than visual experience but also gives the teacher a certain control over the order and nature of the materials a student is to learn. Most music teachers in the world can see a certain logic in such a system for it keeps a novice from performing certain pieces until the musician is matured and skilled enough to play them artistically. This system also supports a guild-like control of literature and performance in a manner which was quite typical of east Asian music until the invention of recording.

4. SOCIAL ROLE OF THE MUSICIAN. The educational restrictions mentioned above interlock with a general east Asian tendency to organize music sociologically and economically into guild systems. In several east Asian countries musicians must acquire a professional name in order to perform for pay. Unlike a modern

union card (which also exists in Asia), such names are usually good only for specific instruments and genres, and sometimes only for performances with other members of the same guild. Even in the changing musical world of the 20th century the guild tradition of east Asia has influenced many aspects of a modern musician's training and life style. In addition east Asian traditional musicians tend to remain primarily artisans rather than 'artists', their status equal to that of carpenters, bus drivers and other skilled workers. In large towns the heads of music guilds or the directors of music committees enjoy some 'star' or 'people's hero' status though this never reaches the extremes of the Western 'musical genius' syndrome except in equivalent modern east Asian genres.

5. CHARACTERISTIC GENRES AND PERFORMING PRACTICE. The east Asian equivalent of the concert in the Western musical and socio-economic sense can be found in two types of music: remnants of ancient court traditions; and performances of theatrical music separated from the original drama. The court musics are no longer found in China itself but they survive in border countries such as Korea (in *aak*), Japan (in *gagaku*) and Vietnam (in *nha nhạc*). These traditions have lost their original social function, for only Japan and a few south-east Asian states have courts that can afford occasional use of such music for ceremonial or religious purposes. State subsidies and university courses are the primary sources for the continuance of ancient east Asian music and its status is rather like that of a collegium musicum in the West. By contrast, theatre music remains a living tradition in most of east Asia. Like Western opera many 'classical' east Asian theatrical forms are subsidized by the government or by special patrons but, like Western musical comedy, other east Asian theatrical genres are profitable and many of their musicians can make a living on the road with troupes that require their special talents. Because of the status of the classical forms and the popularity of more proletarian genres music from east Asian drama can also be heard in concert forms. In addition, there are concert ensembles that play a repertory largely inspired by theatrical styles; groups inspired by Chinese opera are found in Singapore, Hong Kong, Taiwan, or even in New York and San Francisco, or wherever there are Chinese communities. These ensembles are sometimes drawn from the mass of amateur performers, who help to support the professional musicians by taking lessons from them, and by providing audiences for their concerts. In Japan, both professionals and amateurs participate in the shamisen genres derived from kabuki.

Many of the ensembles mentioned above might better be classified as chamber music groups by virtue of the east Asian preference for a transparent sound texture (see §1). In addition, the principle of maximum effect from minimum material noted above tends to result in the frequent choice in east Asian concerts of ensembles of only three or four instruments. Solo recitals are also popular, particularly on east Asian zithers such as the Chinese *ch'in* or *cheng*, the Vietnamese *dan tranh*, the Korean *kayakeum* or the Japanese *koto*. Other instruments such as the Chinese *p'i-p'u* (lute) or the Japanese *shakuhachi* (end-blown flute) are also heard in solo performances.

The primary source of most east Asian genres and performing practice is vocal music. In addition to thea-

trical excerpts there is a great tradition in east Asia of both lyrical and narrative genres; the latter are of special interest because they are the repositories of so much history, poetry and sociology. Folk-like tales are spun off in a Chinese *tu-ku tz'u* (rhymed free verse genre performed to the beat of a drum) while Vietnamese story-tellers may render similar traditions or produce more subtle results by accompanying their texts with a *dan day* (long-necked lute). The forceful, flamenco-like style of a Korean *p'ansori* singer or the melodrama of a Japanese *jōruri* actor-singer are studies in dramatic contrast, while the historical pathos of Japanese narratives accompanied by the *hiwa* (lute) seem to evoke shadows of a tradition that in the West recalls that of Homer.

6 THE 20TH CENTURY. In terms of older traditions it is properly pious but musically inaccurate to presume that contemporary performances of ancient forms represent an unchanging and unchangeable music. The value of those performances of earlier styles of east Asian music that can still be heard, whether live or on recordings, is not, in fact, in their historical accuracy, but in their illustration of the strength of traditions that can evoke something of their original spirit while flexibly adapting their outer features in order to be recognized as part of modern society. This is particularly impressive when one recalls that during the late 19th and early 20th century east Asian music generally fell out of favour with both Eastern and Western intellectuals, and great efforts were made by Asian regional élite circles to create 'proper' orchestral and choral ensembles, neither of which were aesthetically or technically related to the east Asian musical tradition. Many of the Asian middle class and almost all its music educators fell under this spell until the mid-20th century. However, there always seemed to remain a hard core of 'natives' who stubbornly continued to listen to Asian music, particularly in the theatre and in popular forms that were now more easily disseminated by mass communication. At the same time, world scholars gradually came to recognize more clearly that music is not an international language. It consists of a series of equally logical but different closed systems: logical in the sense that the connection between the parts of a system is seldom arbitrary, and closed in the sense that the intimacy of a set of musical units in a given culture may be so strong that they simply would not work if transplanted into another system. One need merely imagine a Chinese opera orchestra playing a Haydn quartet or a Wagnerian singer rendering a Japanese geisha song to understand this. A more important point, however, is that parity began to be established between local traditions and those of the West.

There have been many attempts to make some compromise between Western music and indigenous styles. The People's Republic of China embarked upon a strong programme of 'reconstructed' people's music in which the theme of all music became the struggles and triumphs of Marxist socialism. The idioms used were designed to reflect regional music while embracing the grand national styles heard in new Chinese operas, ballets, bands, choruses, or other Western-related musical communes. Outside China a similar concern can be found for 'creativity' in traditional idioms. However, the music industry and music education of modern east Asia are mostly of the Western type and they exert a

compromising influence on the attitudes and actions of even the most sincere traditional musicians. In the more agricultural areas of east Asia there is musical turmoil, for the rural populations are in aesthetic conflict with the music of the urban centres, which seem to carry a greater prestige and power to communicate. However, in industrial east Asia the musical shrinking of the world was accelerated by this same kind of power and by decades of exchanges between east Asia and the West of musicians and musical ideas. This has led to a rich diversity of music in east Asia. Different traditions exist synchronically; that is, while one young east Asian may be playing the electric guitar another may be part of a folk music group that sings regional and foreign selections with equal enthusiasm. East Asians in Western-style professions seem able to accept Mozart, jazz and native traditions with equal pleasure and amateur musicians can pursue their interests in either indigenous or foreign directions. East Asian popular music is, like that of most of the world, uninhibited by theoretical dogmas except for the rule that it must sell, and thus it is energetically eclectic. It is not a matter of whether it is 'good' music but rather of what it is good for sociologically.

The international awareness of ethnicity or nationalism in the late 20th century has begun to have repercussions on east Asian music education, and lessons may now include music appreciation records of indigenous materials. The east Asian composer, trained under Western concepts of originality and genius, has found the struggle for new national music more difficult. However, a few talented musicians have been able to capture the spirit of older traditions without pretending to sound native, particularly when they use supra-national idioms like electronic music: Tōru Takemitsu of Japan is a good example.

The plethora of simultaneous musical activities is impressive in urban industrialized east Asia. Of course, there are 'endangered species' in indigenous music, but a study of the music history of any country will show that most genres, be they German cantatas or Japanese *rōei* (court songs), changed or were replaced within a few generations. The pleasant surprise of east Asia is the fact that Western music seems to have been absorbed there while, at the same time, many indigenous traditions have been preserved.

East Coast jazz ['hard bop']. A school of jazz performance that arose in New York in the late 1950s. In part a reaction to the refined methods prevalent in Californian jazz circles, this style is best viewed as a development of its parent idiom, BOP, from which it differed not so much melodically (though it was influenced by gospel and modern vocal blues) as rhythmically. In the work of its foremost exponent, the drummer Art Blakey, the ground beat was assured by the use of high-hat or ride cymbal, or both, while the hitherto subsidiary accents on snare, tom-tom and, to a lesser extent, bass drum began to rival the main melodic line in musical importance, at the same time instrumental timbre grew more abrasive and phrasing more agitated, as for example in the work of the tenor saxophonist Sonny Rollins. By the early 1960s commercial exploitation was sapping the style's vitality, but not before it had become widespread and established itself as an important phase in the mainstream of jazz development, and one that also, incidentally, foreshadowed the ensemble emphasis of free jazz.

Eastman School of Music. Conservatory founded in ROCHESTER, New York, in 1921.

Easton, Florence (b Middlesbrough-on-Tees, 25 Oct 1884; d New York, 13 Aug 1955). English soprano. She studied in Paris as well as in London, and her distinguished career was principally in the opera houses of Germany and the USA. In 1904 she married the American tenor Francis MacLennan, they were both engaged at the Court Opera in Berlin from 1907 to 1913, and from 1913 to 1915 at the Hamburg Städtische Oper. Before World War I, Easton made only a few Covent Garden appearances, notably as Madam Butterfly in 1909. In November 1915 she sang at Chicago in *Siegfried*, and two years later began her long and fruitful association with the New York Metropolitan Opera, which lasted without interruption until 1929. Her pure tone, sound technique and excellent musicianship singled her out even in the brilliant assembly of singers collected by Gatti-Casazza, and it is doubtful whether any manager ever possessed a more useful and reliable member of his company. She was immensely versatile, with a repertoire ranging from Brünnhilde to Carmen, exceptionally clear enunciation in four languages and the reputed ability to appear at a moment's notice in any one of over 100 roles, sometimes including several in the same opera (e.g. *Der Rosenkavalier* and *Die Walküre*). At the Metropolitan

she sang some 35 roles, among them Lauretta in the première of Puccini's *Gianni Schicchi* in 1918. Her English appearances between the wars were few: at Covent Garden, as Turandot in 1927, and in 1932 as Isolde and the *Siegfried* Brünnhilde to the *Siegfried* of Melchior (with whom she then recorded the final scene), at Sadler's Wells, as Tosca in 1934. She last appeared in opera, and made her farewell performance, at the Metropolitan on 29 February 1936 as Brünnhilde in *Die Walküre*, receiving an ovation for her still splendid singing and interpretation.

DESMOND SHAWE-TAYLOR

East Syrian rite, music of the. See SYRIAN CHURCH MUSIC

Eastwood, Thomas Hugh (b Hawley, Hampshire, 12 March 1922). English composer. While a member of the British Council in Ankara, he took private composition lessons with Necil Kâzımaksiz; later he studied with Blacher in Berlin and Stein in London, both decisive influences. The first of his works to come to public attention was the String Trio, awarded first prize in the 1949 Cheltenham Open Competitive Music Festival. Thereafter he worked extensively in the theatre and in broadcasting. The best known of his works is perhaps *Christopher Sly*, a chamber opera based on *The Taming of the Shrew* and a piece that is moderately conventional in idiom and form. There is a more exploratory style in the incidental scores, some of them for unusually large forces, and in the chamber music.

RICHARD COOK

Eaton, John Charles (b Bryn Mawr, Penn., 30 March 1935). American composer. From 1953 to 1959 he was at Princeton University, where he received AB and MFA degrees; his composition teachers included Babbitt, Cone and Sessions. He studied the piano with Steuermann, Erich Kahn and Frank Sheridan, and his early career was as a jazz pianist. He has received three

American Prix de Rome (1959, 1960, 1961), two Guggenheim Fellowships (1962, 1965) and commissions from North German Radio, the Public Broadcasting Corporation and the Koussevitzky and Fromm Foundations. Many of Eaton's concert appearances in the USA and Europe have been with the clarinetist and composer William O. Smith. He was composer-in-residence at Indiana University in 1970 and was appointed associate professor there in 1971.

Eaton has utilized the varied resources of electronic instruments with exceptional originality and virtuosity. He has been closely identified with the syn-ket, a type of electronic synthesizer invented by Paolo Ketoff in 1964, which has several keyboards sensitive to pressure and sliding movement. Eaton's Concert Piece for Syn-ket and Symphony Orchestra was first performed in 1966 at Tanglewood by the Boston SO conducted by Schuller. The premiere of his opera *Heracles* took place on 15 April 1972 at the opening of the Musical Arts Center at Indiana University.

JAMES G. ROY JR

Ebdon, Thomas (b Durham, 1738, d Durham, 23 Sept 1811) English organist, conductor and composer from the evidence of the name and date 'T. Ebdon, 1755' carved on the oak screen that divides the choir of Durham Cathedral from one of the aisles, it may be presumed that he received his early musical education as a chorister at the cathedral, probably, after his voice broke, he was an articulated pupil of the organist. In 1763 he was appointed organist of the cathedral, a post which he held for 48 years until his death. In 1783 he was associated with Matthias Hawdon as conductor of the Newcastle Subscription Concerts, in 1786 with George Meredith, and in 1790 with the younger Charles Avison and Hawdon. Among Ebdon's compositions, his sonatas, in the unusual form with three accompanying instruments preferred by Avison, show a small talent, with some fluent, virtuoso keyboard writing but routine, foursquare thematic matter.

WORKS

(all published in London)

VOCAL

6. Glee, 3vv, hpd/pf, op. 3 (c1780)

Sacred Music Composed for the Use of the Choir in Durham, 1-ii (1790, 1810)

6. Favourite Songs, 1v, pf, op. 4 (n.d.)

Other songs publ. separately

INSTRUMENTAL

6. Sonata's, hpd/pf/org, 2 vn, vc (c1780)

A Favorite March (n.d.)

W. H. HUSK/R

Ebeling, Christoph Daniel (b Garmissen, nr. Hildesheim, 20 Nov 1741, d Hamburg, 30 June 1817). German writer on music, translator and librarian. He studied theology at Göttingen and, although he was deaf, became a teacher at the Hamburg Handlungsakademie in 1769 and professor of history and Greek at the Gymnasium in 1784. With C. P. E. Bach he organized a concert in 1772 in honour of a visit by Burney, whose *The Present State of Music in France and Italy* he translated in the same year. He was a close friend of Klopstock, with whom he translated Jennens's text for Handel's *Messiah* in about 1782, and whose poems he edited. In 1793 he began an encyclopedic and statistical description of the USA which had reached seven volumes at his death. For the last 18 years of his life he was librarian of the Hamburg Staatsbibliothek.

As was typical in the German Enlightenment, Ebeling was strongly influenced by French thought, and he published translations of French writings on music and poetry in Hamburg and Hanover periodicals. His commentaries to these works and his other articles on music, though not always critical, reflect the breadth of his interests and activities. His most important contribution to music is the 'Versuch einer auserlesenen musikalischen Bibliothek' (1770), a history of 17th- and 18th-century music by genres, which places him in the company of Burney, Hawkins and Gerbert as one of the first music historians. Ebeling's only known composition is a *Divertissement zu den Poeten nach der Mode* for four voices and instruments (autograph score in *D-Bds*).

HOWARD SERWER

Ebeling, Johann Georg (b Lüneburg, 8 July 1637; d Stettin, 4 Dec 1676). German composer and teacher. He received his earliest education at the St Johannis Gymnasium, Lüneburg, where, as is clear from surviving catalogues of music from the church of St Johannis, music was assiduously cultivated. From as early as 1651 he acquired from the Kantor of St Johannis, Michael Jacobi, a sound knowledge of German sacred continuo songs; moreover, Lüneburg was at this time

the most important centre for the publication of such songs. From 1658 Ebeling studied theology at the University of Helmstedt. In 1660 he received an appointment in Hamburg in the collegium musicum founded by Matthias Weckmann in 1659 and sponsored by Johann Rist. In 1662, on the death of Johannes Crüger, he succeeded him as Kantor of St Nicolai, Berlin, where the poet PAUL GERHARDT had been working as deacon since 1657. Despite a successful application, arranged in 1663 by his father, for Jacobi's position at Lüneburg, he chose to remain in Berlin, where he referred to himself as 'director of music at the principal churches'. Not until internal church politics caused Gerhardt to be dismissed did he himself leave Berlin, in 1667; he became principal teacher of music at the Gymnasium Carolinum, Stettin, where he remained until his death. The fact that he also taught Greek there shows the breadth of his knowledge.

Ebeling is important for music and hymnology because he was the first to collect Gerhardt's hymns. His volume appeared as *Pauli Gerhards geistliche Andachten* (Berlin, 1666-7/R1974; 12 ed. K. Ameln, Kassel, 1934). It contains 120 pieces, and he provided melodies for 112, harmonizing them simply in four parts with two independent ad lib instrumental parts, only in the other eight cases did he use existing melodies. In the numerous later editions (Stettin, 1669, reprinted in 1671, 1683, etc.) only the melodies with continuo were published, 'for greater convenience'. The volume has unmistakable links with the Lüneburg song publications. Musically it is more important for some of Ebeling's melodies than for his settings. His part-writing follows rigidly the style of that in Crüger's *Praxis pietatis melica* (1649) and *Psalmodia sacra* (1657/8), but some of his melodies show much greater independence. Others, however, are more traditional and betray the influence of the Calvinist psalter or of dance-songs, which were particularly popular at the time, on the other hand there are several examples of the early Pietist solo song. The setting of *Gib dich zufrieden und sei stille* is unquestionably among the finest pieces of its kind. Ebeling intended his music for domestic devotions rather than for congregational worship, and it was indeed used more frequently in this way. Three of his melodies are still in the basic repertory of Protestant hymns. He also wrote a six-part funeral song (Berlin, 1666) and one of the very first histories of music, *Archaiologia Orphicae*/i.e. *Antiquitates musicae* (Stettin, 1675).

 WALTER BLANKENBURG

Ebel, Heinrich Carl (b. Neuruppin, 30 Dec 1775, d. Oppeln [now Opole, Poland], 12 March 1824). German lawyer, composer and writer. While a law student at the University of Halle he also studied music with D. G. Türk. After attending the Berlin court he was music director of the Breslau opera (1801-3, succeeded by C.

M. von Weber in 1804) and then returned to law as an administrator. He was a founder of the *Philomusische Gesellschaft* (1804-6), for which he wrote several scholarly essays, and also contributed to a number of periodicals, including the *Allgemeine musikalische Zeitung* in Leipzig.

In spite of his short, but intensive, career as a professional musician, Ebel wrote several compositions, which are above a mere amateur standard. His chamber music is inclined towards the early Romantic (Biedermeyer) style, while his operatic arias more closely follow Classical models.

WORKS

- Stage [all operas, 'lost, unless otherwise indicated]: *Der Schutzgeist* (4), Berlin, 1798, Le déserteur (2), Berlin, c1800, Melida, Berlin, c1800, Selco und Berissa (4, F. Kinderling), Berlin, 1800; *Anacreon* in Jonien (3, H. W. Loest), 1800, rev. Breslau, 1810, *Der Brautigamspiel* (Liederspiel), Breslau, 1801, *Das Fest der Liebe*, Breslau, c1802, *Die Gaben des Genius* (Singspiel), Breslau, c1803, *Das Fest im Fichtthale* (3, after J. C. Bock), Breslau, c1807, *Der Nachtwächter* (Singspiel, 1, S. G. Bürde), Breslau, c1808, *D-D's* additional music for Lanassa (tragedy, K. M. Plumicke, after A.-M. de Mierre *La veuve de Malabar*), 1802, *Dth*, incidental music in *Die Hussiten vor Naumburg* (drama, A. von Kotzebue), c1805, *Der Abschied* (pantomime pas de deux)
 Other vocal: Monolog der Thekla (F. von Schiller), 1v, kbd (Berlin 1801), Cantate zum Andenken der im Lazarethdienste 1813 in Schlesien verstorbenen 63 Ärzte (Bürde), vocal score (Breslau c1813), 2 Romances (Oranienburg, n.d.), cited in Hoffmann (1830) several songs in contemporary anthologies, *Die Unsterblichkeit* oratorio, c1800, lost, *Lob der geselligen Freude*, cantata, 1802, lost, *Preis der Tonkunst* (Loest), cantata, 1811, *SWF*, Variations on 'Hebe dich, in sanfter Feier', 1v, choir, orch, 1811, lost, Mass, 1816, *Bd's* arias, *Dth*, 2 arias with orch, formerly in Singakademie, Berlin, other cantatas, arias, etc., 'lost, cited in Hoffmann (1830)

HUBERT UNVERRICHT

Eben, Petr (b. Žamberk, 22 Jan 1929). Czech composer and pianist. His music education was interrupted during the German occupation, when his 'uncooperative' attitude led to his internment, for the last two years of the war, in Buchenwald. After the war he returned to piano studies, and in 1948 he entered the Prague Academy of Music to study composition with Bořkovec and the piano with Rauch. He graduated in 1954 and embarked on a career as a pianist (specializing in chamber music) and teacher. His most important teaching post has been that of head of music education at Prague University, he has written a series of enchanting and instructive children's songs, as well as folksong arrangements and instrumental pieces for school use, and with Jarmil Burghauser he published *Čtení a hra partitur* ('The reading and playing of scores'; Prague, 1960).

Eben's individuality as a composer may be traced in part to the influence of the environment in which he was brought up: that of the Renaissance town of Český Krumlov. This stimulated his interest in medieval and Renaissance literature and his penchant for stylized archaism, features perfectly illustrated in the first of his pieces to achieve international notice, the *Šestero písní milostných* ('6 love songs', 1951). His commitment to a continuity with tradition is evident in a preoccupation with counterpoint, though he is fully alive to new compositional trends. He also acknowledges a humanist mission for art, a conviction arising perhaps from the concentration camp experience which has instigated in his music recurrent meditations on mortality. This aspect of his work reached a summation in the *Apologia Sokrates*, which affirms his belief in the supremacy of God over life and death.

ADRIENNE SIMPSON

Eberhardt, Johann August (b Halberstadt, 31 Aug 1739; d Halle, 6 Jan 1809) German aesthetician and philosopher. From 1756 to 1759 he studied theology at Halle before returning to Halberstadt as a private tutor. He was then appointed assistant pastor at the Hospitalkirche and vice-principal at the Martineum (Gymnasium). In 1763 he moved to Berlin, where he became part of the group that included Moses Mendelssohn, C. F. Nicolai, J. A. P. Sulzer and J. P. Kirnberger. In 1768 he was appointed pastor at the Berlin workhouse and during this period wrote *Die neue Apologie des Sokrates* (1772), an attack on orthodox theology couched in terms of rationalistic Wolffian philosophy. In 1774 he became pastor at Charlottenburg and continued his theological work. His liberal views attracted the attention of Frederick the Great and led to his appointment as professor of philosophy at Halle in 1778. There he founded two philosophical journals that became the vehicles for his opposition to Kant. He wrote many handbooks and textbooks on philosophy and its history. From the 1780s he turned his attention to linguistic

studies and aesthetics, several times taking up the topic of music.

One of Eberhardt's most important discussions of music is found in his *Handbuch der Aesthetik* (1803) in which he rejected imitation of nature as the primary basis for works of art, maintaining instead that art's ultimate goal was to provide aesthetic pleasure. Mimesis was merely a means to that end and could be modified as circumstances required. Further, imitation was not merely the reproduction of some affect outside the artist, but rather the heightened reflection of his feelings - a view that led directly to the aesthetics of Romanticism. Eberhardt's earlier *Abhandlung über das Melodrama* (1788) pointed out the obvious disparity between the affective potential of the sung portions in this genre as opposed to the spoken parts, which, he maintained, can only produce an unsatisfactory effect. Nonetheless, he considered melodrama a daring experiment worthy of serious consideration. In 1800 he wrote an article for the *Allgemeine musikalische Zeitung* defending Kirnberger's reputation; this essay refers to several treatises by Kirnberger and others and shows that Eberhardt had a considerable knowledge of musical theory.

HOWARD SERWER

Eberhardt, Goby [Johann Jakob] (b Hattersheim, Frankfurt am Main, 29 March 1852; d Lübeck, 13 Sept 1926) German violinist and educationist, father of Siegfried Eberhardt. He was first taught the violin as a child by Dietz, a student of Spohr, and afterwards by Wilhelmj; he made his début at the age of 12. Two years later he was appointed leader at the Komische Oper, Frankfurt. He was leader of orchestras in Berne (1870), Rotterdam, Bremen (1872) and Hamburg (1880). A stroke in 1900 forced him to give up playing and he concentrated instead on teaching. He founded a method called *System des Übens*, which emphasized silent training of the left hand together with certain physical exercises. This system aimed at performance without any inner tensions, and succeeded not only in curing Eberhardt's lamed left hand, but also in solving many technical problems. Eberhardt's compositions are mostly light works and studies; the major part of his output consists of violin methods, though his last book was a collection of short essays on composers, violinists and assorted topics entitled *Erinnerungen an bedeutende Männer unserer Epoche* (Lübeck, 1926).

ALFRED GRANT GOODMAN

Eberhardt, Siegfried (b Frankfurt am Main, 19 March 1883; d Zwickau, 29 June 1960). German violinist and educationist, son of Goby Eberhardt. He studied with Bernhard, Dessau and Arrigo Serrato. In 1908 he joined the staff of the Stern Conservatory, Berlin, which he directed from 1933 until he was forced to retire by the Nazi regime in 1935. A year later he was excluded from the Reichsmusikkammer, and thereafter he devoted his time to educational writing; this included a documentary film *Die schöpferische Gesetzmässigkeit in der Kunst*, which was lost during World War II. In 1945 he founded the Hochschule für Theater und Musik in Halle, and the Zwickau Academy, of which he was director; he held master classes in the violin at both institutions. He developed a system based on *organische Geigenhaltung* (inspired by Paganini) in which, through technical training based on the teachings of natural movements (*Bewegungslehre*), practical finger exercises were linked with posture and movements of the body resulting in the alleviation of inner tension. At the time of his death he left a number of books in manuscript; these include *Übungserfolg und Meisterschaft auf der Geige: Fortschritt und Tradition*.

ALFRED GRANT GOODMAN

Eberhard von Freising (fl. 12th century). In 1784 Martin Gerbert published two very brief treatises under Eberhard's name (*GS*, ii, 279-82) from one MS of the 12th or 13th century, now *D-Mbs* clm 18914. The first treatise is a group of recipes for organ pipe measurements. Apart from the fact that nothing whatever is known about this author, caution is further indicated by the presence of about half the text in the treatise of Arno Scholasticus, where part is simply designated an 'antiqua fistularum mensura', and part explicitly attributed by Arno to WILHELM OF HIRSAU. It is of course possible that Wilhelm borrowed from an earlier work by Eberhard, but it is just as possible that

Eberhard was connected only with the drawing which is labelled with his name in the Munich MS. The second, much briefer work is a few sentences on bellfounding and does not appear to be directly ascribed to Eberhard in any of its four MS sources. Neither work is of independent interest, but both are naturally essential for the history of medieval attempts to apply the simple numerical proportions of harmonious strings to the less tractable organ pipes and bells. Eberhard should perhaps not be counted as a musical theorist until convincing evidence of his existence is produced.

LAWRENCE GUSHFE

Eberl, Anton (Franz Josef) (b Vienna, 13 June 1765, d Vienna, 11 March 1807). Austrian pianist and composer. He displayed great musical talent at an early age and gave private piano recitals in Vienna at the age of eight. His father at first made him study law; but sudden bankruptcy left the family unable to pay for the law examination, thereby permitting him to study music in earnest. He may have been a pupil of Mozart, who befriended and encouraged him. On 9 March 1784 he gave his first public recital in Vienna, and three years later his first stage work, *Die Marchande des Modes*, allegedly drew the praise of Gluck.

In 1788 some of Eberl's piano pieces began to appear under Mozart's name, the first of a great many such misattributions. The earliest of these (published at least 14 times as Mozart's, never as Eberl's) was a set of variations on Ignaz Umlauf's *Zu Steffen sprach im Traume*, if, as Gerber maintained, this was one of Mozart's favourite teaching pieces, this may partly account for the mistaken authorship. Other sets of variations were also published as Mozart's, and Eberl's Piano Sonata in C minor, published as his op. 1 in 1798, had already appeared under Mozart's name and did so later. Eberl wrote public letters in 1798 and 1805 to correct these errors, and in 1799 Constanze Mozart tried unsuccessfully to prevent Breitkopf & Härtel from including an Eberl piece in Mozart's *Oeuvres complètes*. As late as 1944 a work by Eberl, the Symphony in C (1785), appeared in Milan as a 'new Mozart symphony'.

Eberl made concert tours of Germany in winter 1795-6, with Constanze Mozart and her sister Aloisia Lange, and in 1806, when he performed some of his works for two pianos with the young Meyerbeer in Berlin. Between these tours Eberl stayed twice in St Petersburg (1796-9, 1801-2) as a pianist, piano teacher, entertainer of the Russian royal family and Kapellmeister. Apparently he held this last position only in Russia, where he established a reputation as a fine musician. In December 1801 he conducted in St Petersburg three highly successful performances, among the earliest in Russia, of Haydn's *Creation*.

After his return to Vienna Eberl produced a series of instrumental works to highest critical acclaim, and was generally held to be the equal of Beethoven. His piano concertos and last two symphonies opp. 33-4 were compared favourably with similar works by Haydn, Mozart and Beethoven; the Eb Symphony, performed at the première of Beethoven's 'Eroica', was judged the better

of the two. When Eberl died, at the age of 41, the *Allgemeine musikalische Zeitung* remarked that the early death of an artist had seldom been so generally regretted as his was.

Although Eberl was highly regarded as a theatre composer (his *Die Königin der schwarzen Inseln* was praised by Haydn), most of his stage works are lost. The largest group of his extant compositions, the piano works, exhibits not only an early dependence on the influence of Mozart, but his departure from the style of his teacher towards a more Romantic idiom. The seven piano sonatas alone are sufficient reason to restore his name to a prominent place among composers active in Vienna at the time of Beethoven. The last three sonatas opp. 27, 43 and 39, the Fantasia op. 28 and the Toccata op. 46 are worthy of the attention of any pianist of merit. His most outstanding work for piano solo, the Sonata in G minor op. 39, was published shortly after his death, and its superior worth was highly acclaimed, its many moments, especially formal peculiarities, which seem to foreshadow Franck, Chopin and Liszt, show Eberl to be a significant forerunner of the Romantic era.

WORKS

Printed works published in Vienna unless otherwise stated, thematic index in White

DRAMATIC

(lost unless otherwise indicated)

- Die Marchande des Modes (Singspiel, 3), Vienna, Leopoldstadt, 27 Feb 1787
 Graf Balduin von Flandern (comic opera, 2), Vienna, Leopoldstadt, 1788
 Die Hexe Megare (pt m), not later than 1790
 Die Zigeuner (3, H. F. Möller), Vienna, Landstrasse, 1793
 Pyramus und Thisbe (melodrama, 1, F. Eberl), Vienna, National, 7 Dec 1794
 Der Tempel der Unsterblichkeit (prol. Reinbeck), 1799
 Erwine von Steinheim (parody, 3, F. X. Gewey, after A. Blumauer), Vienna, Freihaus, 23 May 1801
 Die Königin der schwarzen Inseln (opera, 2, J. Schwalldopler, after Wieland), Vienna, Kärntnertor, 23 May 1801 *A-Wn* (autograph), ov arr pf (n d)

KEYBOARD

- Sonatas op. 1, 1792 (1798), orig attrib Mozart, Sonatine, 1796, op. 5 (Leipzig, 1807), ed in *Mw*, xv (1959), 5 grandes sonates op. 12 (1802), op. 16 (1802), op. 27 (1805), op. 43, 1805 (1809), op. 39, 1806 (n d), 2 Sonatas, pf duet, op. 7 (St Petersburg, 1799)
 Variations 10 on 'Zu Steffen sprach im Traume' (Hamburg, 1788), attrib Mozart, 12 on 'Bei Männern welche Liebe fühlen' (1792), attrib Mozart, 10 on 'Malbrough s'en va-t-en guerre' (1797), attrib Mozart, '10 on Romance, 1797, op. 6 (Leipzig, 1807), 12 on 'Freundin sanfter Herzenstriebe' (1798), attrib Mozart, 11 on 'Ascuta Jeannette', 1799, op. 9 (St Petersburg, Vienna, 1805), Prelude suivi de 8 variations, 2 pf, 1804, op. 31 (n d)
 Other kbd 3 fantasias op. 15 (1803), op. 28 (1805), op. 30, 1805 (n d), Caprice et rondeau, op. 21 (1803) [? identical with op. 38 (n d)], Toccata, op. 46 (1809), 12 deutsche Tänze, 12 Menuetten (1805), for pf duet, 2 polonaises, op. 19 (1803) and op. 24 (Leipzig, 1805) [? also publ as op. 26], Caprice et rondeau, op. 42 (1808), march (1807)

OTHER INSTRUMENTAL

- Orch 3 syms, 1783 5, *A-Wm*, 2 syms op. 33, 1804 (Leipzig, 1807), op. 34 (Leipzig, 1805); 3 pf concs C, 1797, *D-Bb*, op. 32 (Leipzig, 1805), op. 40 (Leipzig, 1807), 1 for 2 pf, op. 45 (1809)
 Chamber Sextet, pf, str, cl, hn, 1800, op. 47 (1808), Qnt, pf, cl, str, op. 41 (1808), Qnt, pf, ob, str, 1806, op. 48 (n d), 3 str qts, op. 13 (1801), 2 pf qts op. 18 (1802), op. 25, 1804 (n d), 4 pf trios, C (1797), attrib Mozart, 3 as op. 8, c1799 (1805), 2 trios, pf, cl, vc, op. 44, 1803 (1809), op. 36 (Leipzig, 1806); 7 vn sonatas 2 as op. 10, 1800 (1805), op. 14 (1801), op. 20 (1803), op. 35, 1805 (n d), opp. 49, 50, 1806 (n d), Fl Sonata, 1804, op. 29 (n d), Variations sur un thème russe, pf, vc, op. 17 (1802), Grand Duo, pf, vc/vn, 1804, op. 26 (n d)

VOCAL

- Lieder 6 deutsche Lieder, 1, op. 4 (Hamburg, 1796); 6 Gesänge, pf acc., op. 23 (1804), 2 ed in *DTÖ*, lxxix, Jg. xlii/2 (1935/R)
 Other vocal. Bey Mozart's Grab, cantata, 1791, *LEu*; La gloria d'Imeneo (C. Gattechi), cantata, 1799, op. 11, vocal score (c1800).

Serenate, 4vv, cl, va, vc, op. 37 (Leipzig, 1807), Arietta, 1807, in 'In questa tomba oscura' con accompagnamento di pianoforte in XVIII composizioni di diversi maestri (Leipzig, 1808), other single works

A DUANE WHITE

Eberlin, Daniel (b Nuremberg, baptized 4 Dec 1647; d ?Kassel, between Dec 1713 and 5 July 1715). German composer, violinist and administrator. Until recently information about his life was based on the testimony of Telemann, who was his son-in-law. Recent research, however (see Oefner), has enabled his career to be charted more exactly and his dates, hitherto recorded as c1630-92, to be established more firmly. From 1661 he was a treble in the Hofkapelle at Gotha. He himself stated that he studied for two years (probably in 1663-5) with Adam Dresch at Jena. He then entered the service of Duke Johann Georg of Saxe-Eisenach. On the duke's advice and through the mediation of Friedrich, Landgrave of Hesse, he went to Rome; he was there probably between 1668 and 1671 and according to Telemann took part at this time in Turkish wars. From 1671 he was again at Eisenach, as a violinist and composer, but in 1673 he left again and went to Nuremberg, where he held a position as registrar; it is not known whether he held a musical post. His unbridled temper soon caused him difficulties in his work, and he left Nuremberg in 1675 and returned to Eisenach again, this time as private secretary and Kapellmeister. Under his direction the Hofkapelle gained considerable impetus, but by 1678 he had moved again, this time to Kassel, where he reorganized the Hofkapelle. Here too he quarrelled with the musicians, and he had returned to Eisenach yet again by 1685, when he was made Kapellmeister and master of the pages there. From 1689 he was probably no longer Kapellmeister, and there is thenceforward no evidence that he was active as a musician. He was certainly, however, secretary of the mint at Eisenach, and in 1691 he became master of it. He became involved in some shady business, however, and he had to leave Eisenach after an audit of the mint in 1692. It is not known what he did next; Telemann's claim that he became a banker in Hamburg has not yet been confirmed. He reappeared at Kassel in 1705, this time as captain of the militia.

It is hardly possible to make a fair assessment of Eberlin's importance as a composer on the basis of his few surviving works. He must, however, have enjoyed some fame among his contemporaries, for Mattheson later spoke of the 'celebrated Eberlin', and Telemann praised him as a mind 'whose ability few have equalled'. In the musical sphere he was an accomplished contrapuntist and a fine violinist. His few extant vocal works are marked by expressive word-setting and also by rather wilful harmonic writing. He exploited the tonal possibilities of instruments, witness the virtuosio violin solo of the cantata *Ich will in aller Noth*. Johann Christoph Bach wrote 15 variations for harpsichord on his aria *Pro dormiente Camillo*.

WORKS

VOCAL

Allmächtiger, heyliger, ewiger Gott, cantata, 4vv, 2 vn, 3 va, bc, *D-Bds*
Ich kann nit mehr ertragen diesen Jammer, cantata, 4vv, 2 vn, 4 va da
gamba, bc, *S-Uu*

Ich will in aller Noth auf meinen Jesum bauen, cantata, 1v, vn, bc, *D-Bds*

Vae misero qui Deum meum, cantata, 1v, bc (org), *Bds*
Wenn mein Stundlein vorhanden ist, cantata, 4vv, 2 fl, vlc, bc, *S-Uu*
[copy of part of Ich kann nit mehr ertragen]

SUSETTE CLAUSING

Eberlin, Johann Ernst (b Jettingen, nr. Burgau, Bavaria, baptized 27 March 1702, d Salzburg, 19 June 1762) German composer and organist. He attended the Gymnasium in Augsburg, but his consuming interest in music kept him from applying himself fully to his studies. His musical education was similar to that of Leopold Mozart. As an 11-year-old boy Eberlin participated in school performances of musical plays, in later years, this kind of dramatic music occupied him frequently as a composer.

Eberlin arrived in Salzburg in 1721 and was a student at the Benedictine university until 1723 but did not complete a course of study. In 1726 he became fourth organist at Salzburg Cathedral and by 1749 had risen to the rank of court and cathedral Kapellmeister. He received the honorary appointment of *Titular-Truchsess*, or princely steward, in 1754.

Leopold Mozart had moved to Salzburg in 1737 and had become a member of the court chapel in 1743. In his description of the Salzburg musical establishment (published in 1757), Mozart called Eberlin 'a thorough and accomplished master of the art of composing . . . He is entirely in command of the notes, and he composes easily and rapidly . . . One can compare him to the two famous and industrious composers, [Alessandro] Scarlatti and Telemann'. Eberlin was on friendly terms with the Mozart family and with the clergy of St Peter's Abbey in Salzburg, often composing music for special occasions there. In 1752 Eberlin's daughter Maria Josefa married Anton Cajetan Adlgasser, who two years later became cathedral organist. Eberlin was widely honoured and respected at the time of his death. His successor was Joseph Franz Lolli.

Of Eberlin's compositions, only the toccatas and fugues for organ were printed during his lifetime as a separate publication (1747). There were numerous later editions of these and of other keyboard works. For a long time one of Eberlin's fugues was ascribed to J. S. Bach. He composed virtually all kinds of music for which there was official demand in Salzburg. From 1742 he supplied music for numerous school plays and oratorios performed at the university and at St Peter's - a local theatrical and musical tradition that disappeared soon after his death. Three operas with texts by Metastasio are lost, but in the Schuldramen, intermezzos and pastoral plays, Eberlin shows himself a versatile composer in both serious and comic veins. He composed at least 91 dramatic works and oratorios for the court theatre, the university, St Peter's, and the Nonnberg convent. Some oratorio performances were probably staged, with scenery. The music is largely in the reigning Italian style, with secco and accompanied recitatives and extended da capo arias. Simple songs in the style of south German folk music also occur. These plays and oratorios are carefully orchestrated, with occasional instrumental solos. Comic intermezzos are frequent in the school plays, with passages in Salzburg dialect. Melodrama (spoken dialogue with orchestral accompaniment) is occasionally used. Eberlin's oratorio *Sigismundus Hungaricus rex* was performed in 1761 in honour of the archbishop, with 146 participants, among them the five-year-old W. A. Mozart.

Besides Eberlin's keyboard works, little instrumental music survives. He influenced composers of the next generation chiefly through his sacred vocal music. Several works have survived in contemporary manuscript scores. Manuscript or printed scores of church works were rare during this period, and were normally made for study purposes. The works in question are mostly in the strict (contrapuntal) style traditionally used for Advent and Lent. Best known is a manuscript in *GB-Lbm* containing scores of 19 liturgical works by Eberlin and Michael Haydn, all but one copied by Leopold Mozart (not Wolfgang, as was previously believed). This collection, dating from c1773, is repeatedly mentioned in the correspondence between Leopold and Wolfgang Mozart (K Anh 109vi/A 71 8). They both thought highly of Eberlin's contrapuntal writing. Leopold, in sending these scores to his son, pointed out that they were still good models when writing for the church. Wolfgang, in later years, continued to admire Eberlin's vocal writing, though he revised his opinion of his keyboard fugues.

WORKS

DRAMATIC AND VOCAL

Der blutschwitzende Jesus, passion oratorio, ed in DTÖ, lv Jg xxvii/1 (1921/R), Daphne, pastoral play, 1758, 21 oratorios, 61 school plays; intermezzos, cantata 12 in *D-Rp*, some in *A-KR*, music lost for many others

Operas (all lost) Demofonte (Metastasio), 1759, Demetrio (Metastasio), 1760, Ipermestra (Metastasio), 1761, 1763

SACRED

c70 masses, incl Requiem masses and mass frags, 37 litanies, 160 offertories, 35 Vespers and vesper psalms; 3 Te Deum, numerous other liturgical and devotional works in Lat and Ger, incl motets principal sources *A-KR*, *Sd*, *Ssp*, *Sn*, *Wn*, *CH-E*, *D-Mhs*, *Rp*, see also *EitnerQ*, 2 motets ed in DTÖ, lxxx, Jg xliii/1 (1936/R), Missa secundi toni ed. Furlinger (Altötting, 1961); Te Deum, Dixit Dominus, Magnificat ed R G Pauly (Madison, Wisc., 1971)

INSTRUMENTAL

IX toccate e fughe, org (Augsburg, 1747)
115 Versetten und Cadenzen, org (Munich, c1830)
65 Vor- und Nachspiele, Versetten und Fugen . . . in den bekannten 8 Kirchen-Tonarten, org (Munich, c1830)

Other kbd works, incl 2 sonatas, fugues, preludes, variations, cited in *Einiger*
 3 syms., A-KR, Sca; divertimento, KR
 5 pieces for mechanical org (Hornwerk), in *Der Morgen und der Abend*,
 ed. L. Mozart (Salzburg, 1759)
 4 pieces for mechanical org, 1749, Hellbrunn Castle

 REINHARD G PAULY

Ebers, Carl Friedrich (b Kassel, 25 March 1770; d Berlin, 19 Sept 1836). German composer. The son of a teacher of English, he held various posts briefly, including that of musical director of an itinerant drama company. His travels took him to Schwerin (1793), Strelitz (1797), Leipzig, Magdeburg and finally Berlin (from 1822). His four operas (two Italian and two German) and a ballet are lost, his other works include cantatas, symphonies, overtures, two flute concertos, chamber and dance music, several collections of songs (among which was a once-popular drinking-song, *Wir sind die Könige der Welt*) and numerous arrangements. His arrangement as a piano sonata of Weber's Clarinet Quintet won him some notoriety, for Weber protested vigorously (*AMZ*, xviii, 1816, suppl x xi), drawing attention to serious alterations in the music. Ebers replied that he was free to do what he liked with any music, and that here he had improved the original and was willing, if Weber disowned it, to step in as its foster-father.

JOHN WARRACK

Ebers, John (b London, c1785; d London, c1830). English bookseller and operatic manager. Born of immigrant German parents, he had a successful bookselling business in London at 27 Old Bond Street, which he apparently also used as a ticket agency. When the Italian Opera at the King's Theatre, Haymarket, failed in 1820, Ebers took on the management with William Ayrton as his musical director. After a promising season in 1821, which introduced *La gazza ladra* and *Il turco in Italia* to London, difficulties arose in the next year, partly because of the exorbitant demands of various singers. Ayrton resigned and was succeeded by a Signor Petracchi from La Scala, with a new board of management.

Having taken a four-year lease of the theatre in 1822, Ebers was able to introduce more new works by Rossini to London. But unfortunately he sublet the theatre to Benelli, the assistant stage manager, who sustained huge losses in 1824 and then vanished, leaving the artists, including Rossini, unpaid. After a lawsuit, Ebers, encouraged by the hope of increased patronage, and with Pasta as his main attraction, opened another season in 1825. He re-engaged Ayrton, whose service, however, again lasted for only a year. In 1826, Ebers was involved in another lawsuit, which he lost, concerning the pay of the chorus. This season, and that of 1827, both ended prematurely; the rent of the theatre was then greatly increased and this, combined with further artistic difficulties, forced Ebers into bankruptcy, after which he resumed his business as a bookseller. His successor as manager of the King's Theatre was Laurent, the lessee of the Italian Theatre; after only a year he was succeeded by Laporte.

Ebers's own account of his regime, *Seven Years of the King's Theatre* (London, 1828/R1970), is entertaining and vivid (A unique, very important grangerized, i.e. extra-illustrated, copy is in the library at the Garrick Club.) It gives his version of the complicated affairs of the opera house, with ample supporting documents. Though it is (understandably) not wholly objective, it sheds much incidental light on the commercial and other problems of running an international company on the plan of a mixture of old, established favourites and new operas. Ebers's account can be checked against reports and documents published in the *Quarterly Musical Magazine and Review* (1822-8) and in *The Harmonicon* (1823-7), the latter of which, it should be remembered, was edited by Ayrton. Ebers performed a valuable service to the musical life of London during a time of economic uncertainty, and besides half a dozen operas by Rossini, introduced works by Mercadante, Meyerbeer and Spontini. His book contains tables of the fees paid to artists who appeared regularly in successive years and one of the appendices gives a full list of the box-holders—a veritable galaxy of the musical aristocracy.

ALEC HYATT KING

Ebert, (Anton) Carl [Charles] (b Berlin, 20 Feb 1887). German, naturalized American producer and administrator. He trained as an actor at the school attached to the Deutsches Theater, Berlin, under the direction of Max Reinhardt. After appearing as an actor in Frankfurt am Main (1915-22) and Berlin (1922-7), he was appointed general administrator and producer of the Landestheater Darmstadt, where he produced his first opera, *Le nozze di Figaro*. In 1931 he was appointed general administrator of the Berlin Städtische Oper where in the two years before the Nazis came to power, his productions received the highest praise from critics and the public. In 1933 he worked in Salzburg, Florence and with Fritz Busch at the Teatro Colón, Buenos Aires; the following year he and Busch set up the GLYNDEBOURNE Festival, where he was artistic director until 1939, and again from 1947 to 1959. In 1936 he founded the Turkish State School for Opera and Drama, and remained as director until 1947. From 1948 to 1954 he was professor and head of the opera school at the University of Southern California, Los Angeles. In 1954 he returned to Berlin as general

administrator of the Städtische Oper, West Berlin, remaining there until 1961. His productions, especially of Mozart and Verdi, set a high standard, his intensive rehearsals resulting in performances notable for their detail and fine ensemble. He was made a CBE in 1960 and has been awarded honorary doctorates by Edinburgh (1954) and Southern California (1955).

His son Peter Ebert (*b* Frankfurt am Main, 6 April 1918) also worked at Glyndebourne and was director of productions of Scottish Opera (1965–76); he was administrator of the Augsburg Stadttheater (1968–73), of the Bielefeld Stadttheater (1973–5) and of the Wiesbaden Staatstheater (1975–).

HAROLD ROSENTHAL

Eberwein, (Franz) Carl (Adalbert) (*b* Weimar, 10 Nov 1786; *d* Weimar, 2 March 1868). German violinist and composer, younger brother of Traugott Eberwein. He studied with his father before joining the ducal orchestra at Weimar first as flautist and then as violinist (1803). Through this engagement he met Goethe, at whose recommendation he studied for two years in Berlin with Zelter (1808–9). He became musical director at Goethe's house (1807), chamber musician in the ducal orchestra (1810) and in the Stadtkirche (1810), and director of music at the cathedral (1818) in addition to teaching singing. After being turned down for the post of court Kapellmeister (1817), he was ducal music director and director of the opera from 1826 until his retirement in 1849. Eberwein is important not only as a composer, but also for his influence on Goethe and the musical life at Weimar. He wrote several songs and some Singspiels to texts by Goethe and music to his *Faust* and to *Proserpina*. His settings of poems from Goethe's *West-östlicher Divan* and the short patriotic songs, such as *Die Freiheit ist errungen*, are among his better works. Best known for his songs and stage works, Eberwein also composed an oratorio and cantatas, and a few instrumental works, and wrote about musical life at Weimar.

Eberwein married the opera singer Henriette Hässler, who performed many of his songs at the court; his elder brother Ludwig (1782–1832) became first oboist in the court orchestra at Weimar. His younger son, the pianist Maximilian Carl Eberwein (1814–75) was a child prodigy taught first by his father and later by Hummel; after a successful career as a pianist and composer in Berlin and Paris, he settled in Dresden as a music teacher, where Hans von Bülow was among his pupils.

GAYNOR G JONES

Eberwein, Traugott (Maximilian) (*b* Weimar, 27 Oct 1775; *d* Rudolstadt, 2 Dec 1831). German violinist and composer, elder brother of Carl Eberwein. He was the eldest of three sons of Alexander Bartholomäus Eberwein (1751–1811), the Weimar ducal court and town musician whose brother Christian was violinist at Frankfurt am Main before becoming violinist (1794) and musical director (1811) of the Rudolstadt court

orchestra. After taking violin lessons from his father, Traugott studied theory with F. L. A. Kunzen in Frankfurt and the violin with Ernst Schick in Mainz. He had some further instruction from J. C. Kittel (counterpoint) in Erfurt and, stopping at Naples on a concert tour through Germany, France and Italy (1793–4), with Fedele Fenaroli. After a visit to Hamburg (1796), he was engaged as court musician to Prince Ludwig Friedrich von Schwarzburg-Rudolstadt in the following year, later becoming chamber musician (1810) and Kapellmeister (1817) at Rudolstadt. Traugott's reputation rests largely on the standard of performance attained under his direction at Rudolstadt and his work as an early founder of music festivals in Germany, in addition to his many compositions. His settings of Goethe, with whom he was on friendly terms, include the Tafelied *Mich ergreift, ich weiss nicht wie* and dramatic works, among them the Singspiel *Claudine von Villa Bella* (1815) and *Der Jahrmarkt zu Plundersweilen* (1818). Although his songs are modelled on those of Berlin composers such as J. F. Reichardt, Neapolitan elements in them show the influence of Fenaroli. Some of Traugott's more popular songs appeared in student and choral songbooks; he also composed operas, Singspiels and incidental music for the theatre; cantatas, a mass, an oratorio and a *Te Deum*, concertos, chamber and orchestral music. He also wrote reviews for music journals.

GAYNOR G JONES

Ebio, Matthias (*b* Husum, Schleswig, probably in April 1591; *d* Husum, 20 Dec 1676). German composer and teacher. He attended school at Husum and then went to Jena to study law. He returned to Husum in 1616 and took up the position of town Kantor, which he occupied until his retirement in 1673. His reputation as a composer reached beyond his native area, and on the strength of this renown he was able to persuade the town council to finance the publication of several of his works. His only surviving musical works are the 20 German sacred songs and psalms for two voices and continuo comprising his *Prodromus cantionum ecclesiasticarum in decades nonnullas distributarum, i.e. Vortrab geistlicher Kirchen Gesänge . . . sampt etzlichen Psalmen* (Hamburg, 1651). In the same year he published a music tutor for children, *Isagoge musica, das ist Kurtzer und schlechter jedoch gründlicher Unterricht wie ein Knabe in kurzer Zeit mit geringer Muhe Musicam lernen könne* (Husum, 1651). It shows that he adhered firmly to the somewhat outmoded teaching method based on the hexachord and attributed to Guido of Arezzo; it includes 22 familiar Lutheran hymns, the tunes of which were to be used as exercises in fugal writing.

UWE HAENSEL

Ebner, Wolfgang (b Augsburg, 1612; d Vienna, 11 or 12 Feb 1665). German organist and composer resident in Austria. He was appointed organist at St Stephen's Cathedral, Vienna, in 1634. Three years later he began a lifelong association with the imperial court in Vienna under Ferdinand III and later Leopold I, assuming first the position of organist of the Kapelle and becoming cathedral Kapellmeister in 1663; he was also official ballet composer.

Little of Ebner's music is extant, which is regrettable in view of the esteem in which he was held by his contemporaries. Historical evaluations made before much of his music was destroyed in World War II support these appraisals. In 1637 he earned twice the salary of his colleague Froberger, with whom he established the important Viennese keyboard school of the 17th century noted for its fusion of French, English and German styles. Zachow thought highly enough of Ebner to have the young Handel copy at least one composition into a notebook of 1698 (now lost) which Handel kept throughout his life, besides Ebner and Zachow, composers represented in it include Froberger, Kerll, J. A. and J. P. Krieger, Kuhnau, Muffat, Pachelbel and Poglietti. Ebner's best-known composition is the set of 36 variations for harpsichord (Prague, 1648) on a theme by Ferdinand III, which shows many similarities to Froberger's famous *Maverin* suite and may in fact predate it. In both works the order of suite movements governs the overall structure while variation procedures provide the main impetus of musical growth.

Ebner wrote 15 elementary rules of thoroughbass realization, which, though never published in the original Latin, appeared in a German translation by J. A. Herbst as part of his *Arte practica & poetica* (Frankfurt am Main, 1653). As did Agazzari (*Del sonare sopra 'i basso con tutti li stromenti*, 1607), Ebner suggested that the realization should not be allowed to go above the pre-existing melodic line, and like Galeazzo Sabbatini (*Regola facile e breve per sonare sopra il basso continuo*, 1628) he permitted the left hand to share at times in realizing the intervals above the bass.

JOHN D. ARNOLD

Ebran [Abran, Abraham, Ebram, Hebran] (fl c1543-64). French composer. 12 pieces ascribed to 'Ebran' and three to 'Hebran' are included in Attaignant's four-

voice chanson anthologies published at Paris between 1543 and 1549. Nicolas du Chemin printed three more chansons attributed to 'Ebran', and Le Roy & Ballard issued a further two ascribed to 'Abran'. Of these *Tant vous allés doux Guillemette* (RISM 1564¹¹) proved a favourite and was often reprinted; it was also arranged for cittern and for lute and appeared as an *air* for two voices and lute in E. Adriaensen's *Pratum musicum* where it was ascribed to 'Abraham'. *Quand un chacun sert et commande*, a response to Arcadelt's *Pour heur en amour demander* was ascribed to 'Ebram' in Guillaume Morlaye's second lutebook (RISM 1558¹²), but a four-voice version of the same piece later appeared attributed to 'Nicolas' (RISM 1565⁵) and it is probably by Nicolas de La Grotte. Most of Ebran's chansons are courtly *épigrammes* with decasyllabic lines, set in the generally homophonic style of Sandrin and Arcadelt, only two texts are identifiable - *Cesse mon oeil* by Chappuys and *Ung jour d'iver* by Clément Marot.

WORKS

- 19 chansons, 4vv, 1543⁷, 1543⁹, 1543¹¹, 1544⁷, 1545⁸, 1545¹⁰, 1545¹², 1547⁹, 1547¹², 1549²¹, 1549²², 1549²³, 1550¹¹, 1550¹², 1559¹³, 1564¹¹ (arr. cittern, 1570²⁴, arr. lute, 1571¹⁶, 1574¹², arr. 2vv, lute, 1584¹²).

Eccard, Johannes (b Mühlhausen, Thuringia, 1553; d Berlin, 1611). German composer. He was a pupil at the Lateinschule in Mühlhausen where he probably received his first musical training from the young Kantor Joachim a Burck. He was a chorister in the Kapelle of the Weimar court from 1567 until its disbandment in 1571, and from then until the end of 1573 he sang in the Bavarian Hofkapelle in Munich; he was also a pupil of Lassus there. During winter 1573-4, while living in Mühlhausen, he renewed an earlier acquaintance with Joachim a Burck, and formed an association with the poet Ludwig Helmbold, who had been there as a deacon since 1571. In 1577 and 1578 he was in the household of Jakob Fugger in Augsburg, and he dedicated to him his five-part mass *Mon cœur se recommande à vous* (*D-Mbs*). In 1579 he became a member of the Hofkapelle of Margrave Georg Friedrich of Brandenburg-Ansbach, who, having been appointed administrator of the Duchy of Prussia in 1578, had moved with his musicians to Königsberg.

In the Kapelle registers for 1580 Eccard's name appeared for the first time under the list of singers; the household establishment book, however, referred to him from the beginning as vice-Kapellmeister. In 1586 the margrave returned to Ansbach with his Kapellmeister (Teodore Riccio) and the larger part of his musical establishment, leaving Eccard in Königsberg as vice-Kapellmeister. Although Eccard in fact fulfilled there the duties of a first-in-charge, he was not appointed Kapellmeister proper until 1604 when Elector Joachim Friedrich of Brandenburg became administrator of Prussia after the death of Margrave Georg Friedrich. In 1608 Joachim Friedrich gave Eccard sole charge of the music at his principal residence in Berlin; the composer remained there as Kapellmeister until his death, serving both Joachim Friedrich and his successor, Johann Sigismund.

Eccard's work centres largely on the Lutheran chorale. During the second half of the 16th century the chorale was developed simultaneously in two contrasting ways: on the one hand the melody was transferred from the tenor to the highest part and simply harmonized; on the other hand it was freely treated in elaborate polyphonic style. Eccard contributed to both lines of development. The *Geistliche Lieder auf den Choral* of 1597 belong to the simpler genre; the preface to the publication shows clearly the connection of the work with Lucas Oslander's four-part *50 geistliche Lieder und Psalmen* (chorales and psalms set polyphonically in such a way as to enable a congregation to participate in their singing). Eccard's settings somewhat overshadow those of Oslander, however, not only because of their fuller five-part texture, but because of the cleverly worked-out inner parts that create an illusion of polyphony; nevertheless, even the most elaborate settings are not so difficult as to prevent the congregation from joining in the top line.

Together with Lechner, H. L. Hassler, and Michael Praetorius in particular, Eccard was one of the principal Protestant composers of chorale motets (the alternative genre) working at the turn of the 17th century, and in this field lies his most important contribution. The motets from the two volumes of *Preussische Festlieder* (published with works of Stobaeus in 1642 and 1644) show that he was a 'true disciple of the world-famous and celebrated Orlandi [Lassus]' in that he, like his teacher, was capable of realizing the full implications of the text in terms of close word-note relationships and appropriately varied textures. Settings like the five-part *Übers Gebirg Maria geht*, and the six-part *Zacharias war ganz verwirrt* and *Der Heilig Geist vom Himmel kam* reflect the intrinsic warmth of Helmbold's verse, to which Eccard throughout his life returned constantly.

The extent to which Eccard's influence was felt long after his death is shown not only by the many posthumous editions of his works but also in such a composition as Johann Sebastian's oratorical *St Matthew Passion* (Königsberg, 1672), in which the interspersed chorales clearly derive from Eccard's 1597 volume. In the 19th century Eccard's music was regarded as the epitome of the *a cappella* ideal, and in an age of Protestant revival, he was seen as the counterpart to Palestrina who was esteemed by the Caecilians as the classical figure of Catholic church music. This high regard is particularly evident in Winterfeld's standard work in which a section of over 60 pages is devoted to Eccard, the sole representative there of the 16th century.

Of the works of secondary importance, mention should be made of the sacred odes, which, in their essentially homophonic idiom, belong to the early 16th-century genre of the secular scholastic ode. Eccard was also attracted by the Italian villanella, as the title of the posthumously published *Crepundia sacra ... ad imitationem italicarum villanescarum* (1626¹⁰) clearly indicates.

WALTER BLANKENBURG

Ecchienus [?Ormestad, ?Ormsen], **Caspar** (fl. late 16th century). Norwegian composer. His name is perhaps a latinization of the Norwegian name Ormestad or Ormsen. Like JOHANN NESENIUS, he is of interest as one of the earliest Norwegian composers of polyphonic music known by name. He is known only from a four-part motet, *Cor mundum crea in me Deus*, in a manuscript in the state archives at Stockholm (facs. and transcr. in Gurvin). The piece bears an inscription in which 'Caspar Ecchienus from Norway' dedicated it in friendship to one Petrus Jespersen, secretary to Duke Carl - presumably Gustav Vasa's son, who became duke in 1560 and king in 1600.

 JOHN BERGSAGEL

Eccles. English family of musicians.

(1) **Solomon Eccles** [Eagles] (i) (b c1617; d Spitalfields, London, 2 Jan 1682). Musician, later shopkeeper. Both his grandfather and father were musicians, and in his younger days he himself earned about £200 a year teaching the virginals and viols (see his *Musick-lector*). About 1660 after a period of religious uncertainty he became a Quaker. He was a man in whom zeal was apt to outweigh discretion, coming to feel that music-making was sinful he publicly burnt all his instruments on Tower Hill. Some say that he subsequently earned his living as a shoemaker, others as a tailor; in his will he called himself a chandler. In 1667 he wrote a tract, *A Musick-lector*, condemning music. He became notorious for such actions as running half-naked through the streets carrying a pan of fire on his head crying repentance. His fellow Quakers valued his sincerity and his powers as a preacher, but at times found him an embarrassment. On two occasions, for instance, his Monthly Meeting refused to allow him to publish religious tracts. In 1671 he accompanied George Fox on a visit to the West Indies. He apparently did not return with Fox's party in May 1673, but was back in England by October of that year, when he married for a second time.

(2) **Solomon Eccles** [Eagles] (ii) (b ? between 1640 and 1650; d Guildford, buried 1 Dec 1710). Composer and bass violin player, possibly the nephew of (1) Solomon Eccles (i). He was appointed to the King's Private Musick on 31 August 1685 and was one of the musicians who accompanied William III to Holland in 1691. He may have been the 'Eagles' who performed in the masque *Calisto* in 1675. He provided act music for Thomas Otway's *Venice Preserved* and Aphra Behn's *The City Heiress*, or *Sir Timothy Treatall*, both produced early in 1682. Six other sets of tunes, probably also act music for unspecified plays, are extant on GB-Lbm Add 29283-5 and 35043 and Lcm 1144), a few single pieces appear in other contemporary sources. He resigned his place in the Private Musick on 6 August 1710, and died within four months, leaving two sons, William and Charles, and three daughters, the second son may have been the Charles Eccles who composed a gavotte included in the *Compleat Tutor for the Hautboy* (London, c1746) by John Simpson (i).

(3) **Henry Eccles** [Eagles] (i) (b ? between 1640 and 1650; d London, buried 31 March 1711). Musician, possibly brother of (2) Solomon Eccles (ii). He was appointed to the King's Private Musick on 17 July 1689 and was probably a violinist. He went to Holland with William III in 1691 instead of Robert King.

(4) **John Eccles** (b ? London, c1668; d Hampton Wick, 12 Jan 1735). Composer, only son of (3) Henry Eccles (i); he has incorrectly been thought to have been the son of (1) Solomon Eccles (i) and brother of (5) Henry (ii) and Thomas Eccles. The first that is known of John Eccles is the publication of several songs in 1691. In 1693 he became an active composer for the United Companies at the theatre in Drury Lane. His first assignment was to write a dialogue for the singing début of the actress Anne Bracegirdle in Thomas D'Urfey's *The Richmond Heiress*; the dialogue was so successful that he soon became one of London's most popular theatre composers. Recognizing Eccles's ability to write for her needs, Mrs Bracegirdle, undoubtedly under his tutelage, thereafter sang only his music. While with the United

Companies, Eccles created for her the famous mad song 'I burn, I burn', from the second part of D'Urfey's *Don Quixote*, as well as the lead in the masque *The Rape of Europa*, and many incidental songs. Especially important during this period is his setting of the three witch scenes earlier interpolated into *Macbeth* by Davenant. Besides his theatrical activities, Eccles became a musician-in-ordinary without fee in the king's band.

In 1695 the principal actors of the United Companies revolted against the tyranny and vulgarities of its director John Rich and, under the direction of Thomas Betterton, set up a new company at Lincoln's Inn Fields. Eccles followed Mrs Bracegirdle to the new theatre and became its musical director. Here he continued to supply a steady stream of songs for various plays, as well as two 'all-sung' masques for Mrs Bracegirdle, Motteux's *The Loves of Mars and Venus* and *Acis and Galatea*, and a dramatic opera, Dennis's *Rinaldo and Armida*. Other important works at Lincoln's Inn Fields include the two masques, *Hercules and Ixion*, and the musical extravaganza, *Europe's Revels for the Peace*, which celebrated the signing of the Peace of Ryswick in 1697. Still active at court, Eccles replaced Thomas Tallet as one of the king's 24 musicians-in-ordinary in 1696, and in 1700 he was appointed 'Master of Musick, in the room of Dr Staggins'.

The severe competition between the United Companies and Lincoln's Inn Fields had resulted in a decline in the quality of both music and drama by 1700. While the players at Lincoln's Inn Fields tried to keep up the old standards, the old company offered novelty in the form of Italian singers and French dancers, rope dancers, contortionists and similar diversions. When William Congreve offered his masque *The Judgment of Paris* as the basis for a musical contest sponsored by 'several persons of quality', he must have hoped to better the state of theatre music. Scores were submitted by Eccles, Daniel Purcell, Godfrey Finger and John Weldon. Despite the lavish production and universally admired interpretation of *Venus* by Mrs Bracegirdle, Eccles's music was accorded only the second prize. The first went to Weldon who then gave up theatrical composition in favour of sacred music. Eccles's setting, however, was the most popular, and he and Congreve continued their collaboration by creating the *St Cecilia's Day Ode* for 1701.

While continuing to provide Lincoln's Inn Fields with incidental music for many plays, Eccles also produced the required court odes, and by 1704 had finished the vocal music for Granville's dramatic opera *The British Enchanters*. About this time, Congreve and Sir John Vanbrugh had formed a partnership and started the construction of a theatre in the Haymarket as a new home for the company at Lincoln's Inn Fields. It is logical to suppose that Congreve planned his opera libretto *Semele* for the opening of the new theatre in 1705, Eccles's score, however, was not completed until 1707, by when Italian opera had found a firm footing in London and Congreve had left the theatre. Although *The British Enchanters* was successfully given at the Haymarket in 1706 to counteract Italian opera, *Semele* was never staged.

After this disappointment, and probably also because of the deaths or retirements of many of his colleagues, Eccles retired to Hampton Wick where, according to Hawkins, he pursued his favourite sport, angling. Although he gave up all theatrical activities, he

remained active as a court composer, supplying annual odes for New Year's Day and the sovereign's birthday until his death. In his will he left a shilling each to his three daughters; the remainder of his estate went to his servant Sarah Gainer.

Eccles's greatest talent is revealed in his many songs. Remarkable for their beautifully contoured melodies and impeccable prosody, they quickly capture the mood and subtleties of the poetry and are eminently singable. His large works are notable for their dramatic pacing and their carefully planned tonal architecture. In the latter respect he surpassed even Purcell, and was far in advance of his day.

Eccles brought the Restoration tradition to its close. After Purcell's death in 1695 he was undoubtedly the greatest of the Restoration theatre composers. Continuing in Purcell's footsteps, *The Judgment of Paris* was the last of the masques, *The British Enchanters* closed the era of the dramatic opera, and the St Cecilia's Day Ode was the last of the annual celebrations for that saint. In *Semele*, Eccles turned to the Italian style and achieved a fusion between English and Italian elements, comparable with that achieved by Purcell between the French and English styles. More important, he also created a sensitive secco recitative better suited to English than any that was to follow for about 200 years. Had *Semele* been produced, it might have laid the foundations for a national English opera.

WORKS

For theatre pieces, text and some or all music published shortly after first performance unless otherwise indicated, for complete catalogue of pubd songs from theatre pieces see Day and Murre and *BUC'EM*

(5) **Henry Eccles (ii)** (b ?1675-85; d ?1735-45) Violinist and composer. Since he was at first called 'Henry Eccles junior' it is likely that he was related to (3) Henry Eccles (i), but in what way is unknown. The earliest reference to him is on 2 January 1705, when he gave a benefit concert in Mr Hill's dancing room. A Prelude in C minor by him appeared in *Select Preludes & Voluntaries for the Violin* (1705), and a song *No more let Damon's eyes in Wit and Mirth*, iii (2/1707). On 15 May 1713 a concert was given in the Stationers' Hall 'for the Entertainment of . . . the Duke d'Aumont, Embassador extraordinary from France. For the Benefit of Mr Eccles, Musician to his Grace'. Eccles presumably returned to France with the duke's entourage in December 1713. He was certainly living in Paris by 1720, when he published there a set of 12 violin sonatas, 18 movements of which, however, were taken from Valentini's *Allettamenti per camera* op 8, with a further movement coming from Bonporti's *Invenzioni* op 10. A second set of violin sonatas (including two flute sonatas), followed in 1723; no source for these has been traced. Hawkins quoted Henry's brother Thomas (b London, c1672; d c1745) as saying in about 1735 that Henry was then in the service of the King of France, but as he is neither included in Machard's lists of kings' musicians for 1734-64 (*RMFC*, xi, 1971) nor mentioned in Benoit's *Versailles et les musiciens du roi*,

1661-1733, it would seem that this was not so. According to Hawkins, Thomas Eccles was also a violinist - an excellent performer reduced by alcohol addiction to scraping a living by playing in inns and taverns

Echancures (Fr.). BOUTS.

Echappée (Fr., 'escaped [note]'). In part-writing, an unaccented NON-HARMONIC NOTE that intervenes in a melodic resolution but is not contained in the interval circumscribing the resolution, and which is approached in the direction opposite from that of the resolution.

Echappement (Fr.) ESCAPEMENT.

Echéma. See ENFCHÉMA

Echevarria [Chavarri, Chavarria, Echavaria]. A family of Spanish organ makers, active during the 17th and 18th centuries. Originally, they seem to have been from the Basque provinces, and were probably born in different towns. The more important members of the family are here discussed in an approximately chronological order

Pedro de Echevarria (i) was working on the organs of the Cathedral of León in 1644

A Fray José de Eizaga y Echevarria (i), a Franciscan friar from Eibar (Guipúzcoa), built the organs of Alcalá de Henares (Madrid) and of Eibar (Guipúzcoa) before 1659 and those of San Francisco de Vitoria in 1665.

José de Echevarria (ii) was a nephew of the preceding, and built the organs at Tolosa (Guipúzcoa) in 1686. Together he and his uncle worked on the organs of Mondragón (Guipúzcoa) in 1677.

Fray José de Echevarria, 'dwelling in Bilbao', made an organ in the cathedral at Palencia before 1682. He and an Antonio de Echevarria started the other main organ of that cathedral in 1688. This Fray José is probably to be identified with Fray José (i); he died during the construction of the second organ, probably at the end of 1691

Fray Domingo de Echevarria also helped in the building of the Palencia organ and made one for the Cathedral of Valladolid in 1686. In that year Ventura de Chavarri (or 'de Echavarrri'), 'master organ maker', repaired the organs of the Cathedral of Burgo de Osma, in Soria.

A Pedro de Echevarria (ii) built organs in Toledo Cathedral in 1699; he is probably the same man who in the first years of the 18th century was an employee in the royal convent of the Descalzas Reales of Madrid, where he tuned and repaired organs. This latter was, known as Pedro de Liberna (or Liborna) Echevarria, and he built the organ of Cuenca Cathedral at some time before 1699, and in that year he was consulted about the plans for the organ in the Cathedral of Sigüenza (Guadalajara). At that time he lived in Oñate (Guipúzcoa).

José de Echevarria, 'dwelling in Oñate', made an organ at Burgos Cathedral (1704-6). In 1708 he was invited to construct the other main organ of that cathe-

dral, but he declined on the grounds that he was too old. This, and the knowledge that he lived in Oñate, suggest that he may be identified with José de Echevarría (ii).

A Pedro de Echevarría (iii) was working on the organ of the Cathedral of Salamanca in 1744. In 1769 he and José de Echevarría (iii) built one in Segovia. Both appear to have been living in Madrid, with Pedro named as 'organ maker for the king'.

Other Echevarrias are known to have been organ builders in the 18th century (Segovia Cathedral, 1700, Oviedo, etc), but their full names are not known.

Juan Marigómez de Echevarría was 'organ maker in the royal chapel' of Madrid until his death in 1805, being succeeded by his brother José Marigómez de Echevarría. Both were nephews of a José de Echevarría, who is also described as 'organ maker for the king'. This uncle may have been José de Echevarría (iii).

Echevarrias constructed organs in several of the most important cathedrals in Spain for two centuries. Some of the organs they made are still in use.

Echo. Imitation in music of a natural echo effect. It became popular during the 16th century in madrigals and similar compositions, e.g. Marenzio's *O tu che fra le velve* and Lassus's *O la, o che bon echo*. From them the device passed into other forms of vocal music where such movements were frequent throughout the 17th century. Effective examples are in Cavalieri's *Rappresentatione di Anima, et di Corpo* (1600) where the Soul questions Heaven and the text is contrived so that the echo gives an intelligible answer (e.g. Soul: 'Chi da la morte al cor con dispiacere?' Answer: 'Piacere'); in Carissimi's *Jephth* (c1645) when Jephth's lamenting daughter calls upon the girls to grieve with her, and in Purcell's *Dido and Aeneas* (an echo chorus and dance) and *The Fairy Queen* ('May the god of wit inspire' in Act 2).

Echo movements were used in purely instrumental music too. A number of dances employing the device are found in English consort music (e.g. MB, xxxii, 1972, p.27) and it was sometimes exploited in compositions for harpsichords with two manuals such as the last movement of J. S. Bach's *Ouverture nach französischer Art* (BWV831). In his fourth Brandenburg Concerto Bach wrote for 'fauti d'echo', which may have been, like flageolets, an octave higher than the standard recorder of the day.

In vocal music only the last few notes of each phrase were echoed, but in instrumental music more often the whole phrase or fragment was repeated, sometimes by different instruments; every phrase of Mozart's Serenade K286, however, has three genuine echos, each shorter than the last. The soft repetition of phrases was not confined to systematic echo movements but became a pervasive technique in Baroque music. Echo effects in

organ music were facilitated by the development of different stops. See ORGAN STOP.

 MARGARET LAURIE

Echo organ. A subsidiary chest encased within the main organ, usually with its own keyboard; whatever the kind of organ concerned, the Echo is the department lowest in priority and the one given to the softest tone-colours. Organ music with echo effects (Kotter, Sweelinck, Kindermann, J. S. Bach, Franck, etc) rarely requires an Echo department as such, although much organ music c1900 was written specifically for the far-distant altar or apse organs made feasible by the new electric actions.

Each country had its own kind of Echo organ: a little half-compass manual with Cornet and reed stop behind the music desk (France, 1630), higher up at the back of the organ, with its box-front movable to give swell effects (England, 1710), to the left of the keyboards on the floor (Spain, by 1700) or with swell shutters (Venice, 1775), a large department placed at the back of the organ (south Germany, 1730) or a small chest at the very top of the case with or without swell-lid (larger churches throughout Spain and Germany).

PETER WILLIAMS

Echos (Gk. 'sound') A technical term in Byzantine music which has usually been translated 'mode' or 'modality'.

- 1 Meaning 2 Intonation formulae 3 Tonality 4 Medieval theory 5 Echos and centonization 6 Origin of the term

1 MEANING There is considerable difference between the eastern and western European understanding of modality. In the West, the term 'mode' most often means a scale or 'octave species', but an echos depends rather on a 'mood' (presumably related to 'ethos' in Greek antiquity) which is in turn dependent on the types of melody found in that echos. These melody-types, when systematized by theorists, do produce different 'octave species' or scales. Yet this is of secondary significance compared to the melodies themselves, even though the latter presuppose the existence of a succession of pitches which are used during the course of the melodies. An echos in fact consists primarily of a repertory of melodic formulae together with some melodic motifs and even melody-types.

These categories overlap at times: a melody-type may be a melodic formula, but a melodic formula may be only part of a melody-type. The motif is the smallest of these units and is found as a subdivision of the larger structural elements, the formula and the melody-type. The latter is the largest of the three. Some of these elements may appear exclusively in a single echos, others may be found in more than one echos. Formulae which are found in more than one echos are termed 'wandering' melodic elements, and are distinguished from one another by slight inflections or differences in their melodic intervals, even though the basic melodic outline remains the same. In general, a hymn composed in an echos will contain a set of melodic turns (motifs, formulae or melody-types) peculiar to that echos; and these structural devices will be found in other hymns composed in the same echos.

The 'melodic formula' is not a rigid pattern of definite length consisting of a fixed number of notes. Although

some parts of it will remain stable, the rest is subject to transformation, generally by contraction or expansion. (Formulae may be expanded either by the repetition of a single pitch or by the insertion of notes or motifs at various points.)

There is as yet no inventory of the melodic formulae found in Byzantine chant arranged according to the *echoi* in which they appear. According to their function, the melodic structural elements may be classified as cadential formulae, initial formulae and transitional formulae. Cadential formulae appear primarily at the endings of a hymn, of a verse or even briefer melodic segments. Initial formulae are fewer in number than the previous category, with some distinct melodic patterns, and transitional formulae are often used within a hymn to lead from one type of formula to another; they never appear independently. Some transitional patterns are quite brief, motifs rather than formulae. While initial formulae are used only for the opening parts of a hymn or a verse, cadential formulae may appear not only at the endings but also at the opening sections of a segment of a hymn.

2 INTONATION FORMULAE. A hymn in any given *echos* will be preceded by an *epechema* (intonation formula). It serves as an indication of the *echos* and was probably sung by the precentor before the chanting by the choir. Intonations are accompanied by syllables sung with their melodies (such as *anances*, *neagie*, etc; these became known in the West as the 'Noeane tropes'). The Byzantine intonation formula gave only the basic melodic framework of the particular *echos*. All medieval Byzantine music MSS contain indications of the *echoi*, usually as the endings of the intonation formulae (*martyria*), or (in a smaller number of instances) as the intonations in full (These signatures at the beginning of each hymn were essential, since the Byzantine neumatic notation is intervallic, designating a note only in relationship to the preceding pitch.)

Many compositions also contain internal intonation signs. These 'medial signatures' at times appear to designate the pitch which the chanter should have reached, and serve as a check for correct performance. It has fairly recently been found that many compositions contain medial signatures with a second function: as an indication of a change into a new mode. These are instances of the transposition of a mode, rather than modulation, for which there was a special system of signs known as *phthorai* which served as indications of chromatic changes in the melody, giving it the flavour of a different *echos*.

3 TONALITY. Research so far indicates that most medieval Byzantine melodies were composed and sung in a diatonic tonal system. No surviving theoretical treatise gives sufficient detail to warrant the assumption that the chromatic and enharmonic tetrachords of the ancient Greeks were in use in Byzantium. Discussion of them in the few treatises appears to be a restatement of the ideas of antiquity rather than a reflection of contemporary musical practice. The inference about the basically diatonic tonal system of Byzantine music is obtained empirically from the analysis of existing theoretical treatises and from the melodies themselves.

4 MEDIEVAL THEORY. The eight *echoi* in use in Byzantine music are frequently discussed in medieval treatises, most of which are unfortunately ambiguous in

their wording. This point may easily be demonstrated by citing statements about the theoretical starting notes for each *echos*. Most texts state that the starting note of the '*echos deuteros*' (2nd mode) is 'one step above that of the *echos protos*' (1st mode). Nowhere is there any hint whether that step is a whole tone or semitone. Similarly, the starting note of the '*echos tritos*' (3rd mode) is described equivocally as being 'one step above that for the *deuteros*'. It is clear, however, that the sequence of these initial notes ultimately results in a gamut of an octave. It may consequently be presumed that this octave consisted of two disjunct tetrachords (although for one part of the repertory a system of conjunct tetrachords also appears possible). In instances of the transposition of an *echos*, a melodic segment would require the use of sharps or flats.

An *echos* frequently begins with the pitch which may be viewed as its 'tonic', but the opening of a melody depends on the intonation formulae and the notation that follows; most *echoi* have one or two distinct pitches on which the melodies in that *echos* may end. For instance, melodies in the *echos protos* (1st mode) may end either on *d* or *a*. It can be shown that there are some 'ruling notes' in each *echos* which are more prominent than the other pitches in a hymn.

A curious problem is raised in the listing of *echoi* in treatises, by the terminology describing ascent and descent. The didactic treatises state that one moves in stepwise ascent from the initial note of the *protos* to that of the *deuteros*, and then to that of the *tritros* and the *tetartos* (1st, 2nd, 3rd and 4th modes). If one continues to ascend, one again touches upon the initial notes of these same modes, in the same sequence. If one proceeds downward, however, starting from the theoretical initial note of the *protos*, the next step in the descent will reach the initial note of the *plagios tetartos* (4th plagal mode); the next note in the descent is described as the starting-tone of the '*echos barys*' (the 3rd plagal mode; curiously, the term '*plagios tritos*' is never used in Byzantine treatises, which substitute the designation '*barys*', that is, 'low' mode). In most early Byzantine texts there is no special term for the so-called 'authentic' modes; in a few later texts the term '*krynoi*' (i.e. 'main' or perhaps 'authentic') appears. Future research must determine whether the appearance of this term represents an original Greek usage or a translation into Greek of concepts already widespread in the Latin west. The term '*plagios*' (plagal) is found in all surviving music MSS.

Besides the four 'main' and the corresponding 'plagal' *echoi*, the theoretical treatises also mention a category of '*mesos*' *echos* (?mediant mode); their starting notes appear to have been a 3rd higher than the theoretical initial notes of an *echos*. Again no distinction is made between the major or minor 3rd. There are also references to mode-types called '*para-mesos*' and '*para-krynos*', both of which require further investigation.

5. ECHOS AND CENTONIZATION. Analytical studies have suggested that the process by which a hymn was composed in an *echos* was similar to the principle of 'centonization' in Roman chant. The degree of similarity varies, however, from one type of chant to another. It has also been suggested that the concept of *echos* strongly resembles the Arabic *maqām*, with its use of formulaic patterns. Such points need further study before the for-

mulation of principles common to both musical cultures can be attempted.

6. ORIGIN OF THE TERM. The use of the term *echos* to describe the melodic framework within which a hymn is to be performed appears to be documented for the first time in the text of *GB-Mr Papyrus 466* from the 7th century AD. Some liturgical hymns are attributed to poets from earlier centuries and also carry the designations of the *echoi* in which they are to be performed in the services. The presence of the term in MSS may represent an addition, dating from the period, after the 7th century, in which the system of eight modes (*oktōēchos*) was formulated. The Greeks traditionally ascribe the codification of the *oktōēchos* to John Damascene (active in the first half of the 8th century), which is probably a legend similar to that attributing to Pope Gregory the codification of the so-called Gregorian chant. Avid defenders of orthodoxy refer to the main body of music in the Greek Orthodox church as Damascenian melodies, although for most of these a later date is an absolute certainty.

MILOŠ VELIMIROVIĆ

Eck. German family of musicians, probably of Bohemian origin.

(1) **Georg Eck** (fl. 1765-82). Horn player. From 1765, according to the Palatine electoral almanac, he was a horn player in the Mannheim orchestra. The salary list of 1778 names him as one of the 'accompanying persons' when the electoral court moved to Munich. He appeared in the orchestra list of the Munich court calendar for the last time in 1782. W. A. Mozart mentioned him several times in his letters of 1780.

(2) **Friedrich Johann (Gerhard) Eck** (b. Schwetzingen, 25 May 1767; d. Schwetzingen, 22 Feb. 1838). Violinist and composer, son of (1) Georg Eck. The dates of birth and death commonly cited, 1766 and 1809-10, are incorrect. He was already receiving violin lessons from Christian Danner at the age of seven and from 1778 he served as a supernumerary violinist in the Mannheim orchestra. In the same year he went with most of the other court musicians to Munich, where he studied composition with Peter Winter. He performed publicly with his father in 1799 during a visit to Leipzig. In Munich he served as violinist and as 'Director of Music of the small court theatre', and in 1788 he was promoted to *Konzertmeister*; the salary list of 1798 has him only as 'Director Eck', though Christian Cannabich then had the direction of the small court theatre. On 21 May 1800 Eck was dismissed and

gave up his musical career, probably because of his elopement with a countess from Munich and their marriage in Switzerland. According to Spohr, the couple lived first in Paris, and finally near Nancy.

As a violinist, Eck belonged to the last generation of Mannheim violin virtuosos such as Wilhelm Cramer and Ferdinand Fränzl. J. F. Reichardt, who heard him in Berlin in 1791, praised his beautiful tone and tasteful performance, and wrote that apart from Salomon in London no violinist had ever given him such pleasure (*Musikalische Monatsschrift*, 1792). The *Allgemeine musikalische Zeitung* (v, 1802-3) acclaimed his unfailing effect on the public. He published five violin concertos in Offenbach and a *Première concertante* for two violins and orchestra in Leipzig (op. 8, 1801). His *Concertante* for two violins (with which Joachim made his début aged eight in 1839) was probably written to be played with his younger brother and is of exceptional technical difficulty. The other violin concertos are similar in style to those of Pierre Rode, Rodolphe Kreutzer and Fränzl. Eck is believed to have had a role in the transmission of the existing text of the Mozart Violin Concerto K268.

(3) **Franz Eck** (b. Mannheim, 1774, d. ? Strasbourg, 1804). Violinist, brother of (2) Friedrich Johann Eck. The salary lists of 1789 and 1790 show him among the violinists of the Munich orchestra, but his name appeared in the court calendar only in 1791. In 1798 he performed as a 'concert violinist' there. In 1801 he left Munich, apparently as a result of an amorous adventure, and began a career as a travelling virtuoso. At the beginning of 1802 the young Spohr became his pupil and they travelled together round Germany (1802) and then to St Petersburg (1803), where Eck rapidly became the centre of a musical circle and was appointed solo virtuoso to the court orchestra at a salary of 3500 roubles. An illness that had already shown itself in Germany developed into madness in Russia, so the tsar had him taken to his brother in Nancy. He probably died in the Strasbourg Asylum. His violin playing was characterized by Spohr as 'controlled and powerful, yet always pleasing', with an exceptional technique for ornamentation, rich in nuance and having unsurpassed precision and 'irresistible charm'.

ROLAND WÜRTZ

Eckard [Eckardt, Eckart], **Johann Gottfried** (b. Augsburg, 21 Jan. 1735; d. Paris, 24 July 1809). German pianist and composer active in France. In his youth he became a professional copper engraver and acquired his musical training in his leisure time, mainly from C. P. E. Bach's *Versuch* and its six 'Probesonaten'. In 1758 the piano and organ manufacturer Johann Andreas Stein took him to Paris, where he lived for the rest of his life. At first he supported himself by painting miniatures, a craft in which he apparently possessed considerable skill. He practised the piano in his free time and quickly developed a great facility. Many successful concerts soon gained him fame and numerous students.

Leopold Mozart became acquainted with Eckard during his visit to Paris in the winter of 1763-4, and expressed high regard for him. Grimm, in his *Correspondance littéraire*, called Eckard 'the strongest' of all Parisian composers, stating that 'he has genius, the most beautiful ideas, with a manner of playing full of feeling and an extraordinary lightness'. That this was not merely a momentary captivation of the Parisian musical circles is attested to by J.-B. de La Borde, who declared in 1780 that Eckard's execution at the keyboard was 'the most brilliant and pleasing' and that 'he excels particularly at preluding for entire hours making the time pass as moments for those who listen to him'. Burney gave further testimony to the high regard felt for him by his contemporaries:

There are many great German musicians dispersed throughout Europe, whose merit is little known in England, or even in their native land, among these is Eckard, who has been fifty years at Paris. This musician has published but little, yet by what has appeared, it is manifest that he is a man of genius and a great master of his instrument

On his death the *Mercur de France* remarked that he was 'the most celebrated harpsichordist of Europe'.

Eckard has two claims to historical significance: he was the first composer in Paris to conceive keyboard sonatas for the piano, and he foresaw the great vogue the piano would enjoy several years before this instrument was accepted in the salons and concert halls of Paris. Unfortunately only three works by him were published: the six sonatas op.1 (1763), two sonatas op.2 (1764) and a set of variations (1764) on the 'Menuet d'Exaudet' (All these works are edited by E. Reeser in *J. G. Eckard: Oeuvres complètes*, Kassel, 1956; the fugues and concertos referred to by Schubart are not extant.) Although the title-page of op.1 specifies only the harpsichord, Eckard's preface extends the performance of the work to the piano; and his meticulous indication of dynamic shadings (e.g. no.6, second movement), a practice previously unknown in this period, clearly shows his preference for the latter instrument. Both the piano and harpsichord are specified on the title-page of his op.2, and the music reveals an even greater consideration for the idiomatic characteristics of the new instrument.

Eckard's sonatas follow no set pattern with regard to formal organization: half are in three movements, two consist of only two movements, and two others are cast in a rather extended single movement (op.1 nos.4-5). Unlike the sonatas of Eckard's émigré compatriots in Paris, none calls for accompanying instruments to heighten expression. The texture is enlivened at times by the contrapuntal involvement of the left hand; and in an effort to make the accompaniment of greater musical significance, Eckard did not restrict himself to the Alberti bass pattern, but used it rather as one of several devices. Although his thematic material is not particularly distinguishable from that of his contemporaries, Eckard's ability to develop it anticipates the mature works of Haydn and Mozart (e.g. op.1 no.2, first movement). His style shows the influence of C. P. E. Bach (op.1 no.3, first movement) and is similar to that of his fellow expatriate Johann Schobert (cf. the first movements of Eckard's op.1 no.3 and Schobert's op.14 no.3). He also exerted a considerable influence on the young Mozart, who admired his works and adopted some of their traits in his keyboard music of 1762-4 (Mozart's accompanied sonata K6 is derivative of the first and third movements of Eckard's op.1 no.1). Fur-

thermore, in 1767 Mozart transcribed one of Eckard's one-movement sonatas (op.1 no.4) as the slow movement of his Piano Concerto K40.

HERBERT C. TURRENTINE

Eckardt, Hans (b Magdeburg, 29 Oct 1905; d Berlin, 26 Feb 1969) German musicologist. He studied musicology (1925-32) at Berlin, Paris and Heidelberg, where he took the doctorate in 1932 with a dissertation on French Romantic attitudes to music. While teaching German at the Kyushu High School and Imperial University, Fukuoka (1932-5), he enlarged his early interest in Japanese medieval music, and after studying at Tokyo University (1936-7) became academic director of the Japanese-German Cultural History Research Institute (1938) and lecturer at St Thomas's Philosophical College (1946-7) in Kyoto. On his return to Germany after the war he supported himself as a freelance writer. In 1954 he completed his *Habilitation* with a work on the *Kokonchomonshū* at the Berlin Free University, where he became lecturer, *ausserplanmässiger Professor* (1958) and professor (1964) of Japanese and devoted his energies to building up a department of East Asian studies. Concurrently he directed the Japanese section of the International Institute for Comparative Musical Research and Documentation in Berlin. Eckardt's thorough and comprehensive knowledge of Chinese and Japanese sources and his sympathy with their milieu enabled him both to give illuminating accounts of Japanese classical music and to gauge the impact of modern European music on East Asian culture. In his teaching of modern East Asian history he contributed to the reorientation of East Asian studies in Germany.

RUTH SMITH

Eckel, Matthias (fl early 16th century). German composer. A few isolated facts are known of his life: in 1516 he was associated with the Dresden ducal court as *Reinischreiber*; he was paid for a motet on '39. cap. Ecclesiastici' by the Leipzig city council; notations in a Budapest manuscript (*H-BA* 22) indicate the dates of three of his compositions as 1518, 1529 and 1537, the latter bearing the dedication to Duke Henry of Saxony. He is represented in several contemporary published anthologies of German polyphonic song (by Schöffler-Apinarius, Ott, Forster) as well as in various manuscript collections. However, his chief contribution as a composer was to the music of the Reformation Church, particularly as seen in the publications of Georg Rhau (*Selectae harmoniae*, 1538; *Symphoniae iucundae*, 1538; *Sacrorum hymnorum liber primus*, 1542, *Bicinia*, 1545) and manuscripts which were devoted primarily to use in this church (*D-Rp* B211-215, B220-222; *D-Z* 73, 78, 81; *H-BA* 22). The quality of his works, which show considerable Franco-Netherlands influence, would place him high among his contemporaries, pervading imitation is handled with a high degree of vitality; the tendency to write in simple chordal counterpoint with accented declamation, however, is a late feature of the second generation of German polyphonists

VICTOR H MATTFELD

Eckelt [Eckoldt], Johann Valentin (b Werningshausen, Erfurt, baptized 8 May 1673; d Sondershausen, 18 Dec 1732). German organist, composer and theorist. Although orphaned at the age of nine, Eckelt had a good grammar school education in Gotha and Erfurt. In the latter place he studied briefly with Johann Pachelbel. He became organist of the Liebfrauenkirche in Wernigerode in 1697. Andreas Werckmeister, who had connections with the town, may also have influenced his development. In 1701 or 1703 he moved to the Holy Trinity Church in Sondershausen and remained there until shortly before his death. One of his successors at Sondershausen was the court organist and lexicographer Ernst Ludwig Gerber, who subsequently acquired Eckelt's library.

In the monograph about Eckelt, Gerber cited three theoretical works which later disappeared: *Experimenta musicae geometrica* (1715), *Unterricht eine Fuge zu formiren* (1722) and *Unterricht, was ein Organist wissen soll*. A fourth study, the *Prolegomena de musica in genere*, attempted to justify Eckelt's theories about music with proof from the scriptures, an attitude typical in some Lutheran musical circles of the time. Although he gave himself the title 'componista' early in his career, it is virtually impossible to assess Eckelt's worth. Gerber knew a Passion setting of his, as well as sacred arias and instrumental pieces, but none of these survives. Except for his youth, Eckelt might be the composer of the anonymous pieces in the anthology he copied in 1692. This *Tabulaturbuch* (missing since World War II) was also an important source for Pachelbel and Froberger.

HUGH J McLEAN

Eckhardt-Gramatté, S(ophie)-C(armen) [Fridman-Kochevskoy, Sonia de, Friedman(-Gramatté), Sonia] (b Moscow, 6 Jan 1902, d Stuttgart, 2 Dec 1974). Canadian composer, pianist and violinist. She began piano studies with her mother, a pupil of Rubinstein, and went on to study the piano and the violin at the Paris Conservatoire. At the age of 11 she made her début on both instruments, when she played the Kreutzer and Appassionata Sonatas in the same evening. Subsequently she studied the violin with Huberman and with Thibaud, and in the early 1920s she toured with Edwin Fischer as a piano duo. In 1929 she made her American début with Stokowski, playing piano and violin concertos in one programme. She then

went to Germany and by 1936 had begun composition lessons with Trapp at the Prussian Academy, Berlin, having abandoned her career as a virtuoso. In 1939 she moved to Vienna where she won many composition prizes, received several commissions and was very active in the Austrian section of the ISCM. She settled in Canada in 1953. In 1970 she received a doctorate from Brandon University and was given the title of professor by the Austrian Ministry of Education. Her music bursts with the same controlled energy that marked her personality.

KEITH MACMILLAN

Eckoldt, Johann Valentin. See ECKEIT, JOHANN VALENTIN

Eckstein, Pavel (b Opava, 27 April 1911) Czech music critic and administrator. He studied law at Prague University (JUDr 1935) and learnt music privately. He was imprisoned during the German occupation (1941-5), and after the liberation worked as an organizer and popularizer in the secretariat of the Prague Spring Music Festival (1948-52). As a member of the Union of Czechoslovak Composers he was secretary of the secretariat (1952-71) and also directed the foreign section for many years, he did much for the growth of wider international cooperation and for the cause of Czech music abroad. He has written many informative articles about contemporary and older Czech music for various periodicals, including *Opera*, *Musical America*, *Opera News*, *Opernwelt*, *Oper und Konzert* and *Musik und Gesellschaft*. In *Hudební rozhledy*, of which he was an editor (1950-56), he published articles about important premières abroad and gave regular accounts of the domestic musical scene, especially opera. He was a member of the ISCM presidential committee and secretary of the national committee of the International Music Council (1969-71). His experience and his thorough understanding of opera led to his appointment as artistic adviser of the National Theatre, Prague, in 1969.

JOSEF BEK

Eckstine, Billy [Eckstein, William Clarence, Mr B] (b Pittsburgh, Penn., 8 July 1914). Black American singer and band-leader. After studies at Howard University in Washington, DC, he became a successful singer, especially of blues. In Chicago in 1939 he was engaged as the vocalist of Earl Hines's band, where he also learnt the trumpet. By 1943, largely through Eckstine's efforts, the band had taken on young bop musicians including Charlie Parker, Dizzy Gillespie and Sarah Vaughan, giving an important impetus to the newly emerging style and becoming the first major big band to show its influence. Eckstine's remarkable success as a singer enabled him to form his own big band in 1944; at various times it included such important early bop musicians as the trumpeters Gillespie, Fats Navarro, Kenny Dorham, Miles Davis and Freddy Webster, the saxophonists Parker, Gene Ammons, Lucky Thompson and Dexter Gordon, the pianist Clyde Hart, the bassist Oscar Pettiford, the drummer Art Blakey and arrangers Tadd Dameron and Budd Johnson. The band's style successfully blended contemporary urban blues with the harmonic and rhythmic innovations of bop, as in its fine recordings *Blowing the Blues Away* (1944, De Luxe 2001) and *Good Jelly Blues* (1944). By 1947 it had become economically unfeasible to maintain the orchestra, and Eckstine took up a highly successful career as a popular singer, his rich baritone voice having a particular appeal with black audiences. In 1954 he published an article on his band-leading experience entitled 'Leading my own Outfit' (*Melody Maker*, xxx).

GUNTHER SCHULLER

Eclisses (Fr.) RIBS.

Eclogue (Ger. *Eklog*). A piece of a pastoral nature. The word was originally used to denote a literary work, often in the form of a dialogue. The Greek derivation of the word is obscure, but it may come from roots meaning a dialogue between goatherds. The word has been applied to the *Bucolica* of Virgil, and eclogues were written earlier by Theocritus. In the Renaissance such poems were given a dramatic form, and the *egloga*, a pastoral play with music related to the zarzuela, was important in Spain in the 16th and 17th centuries. By the end of the 18th century the form was firmly established in European literature.

The term was applied to piano pieces in the 19th century, first by Tomášek, who wrote seven sets of eclogues, the earliest of which (op.35) appeared in 1807. His style in these pieces is suave and equable, and he freely used typical pianistic figuration and dialogue techniques. Most are in binary form. The pastoral sweetness is heard at its best in no.8, a 6/8 piece in F, but the variety of mood found in these pieces is wide and deliberate: no.9, for instance, is in two parts marked 'giocoso' and 'malinconico'. Later, there are eclogues by Franck (op.3, 1842), Liszt (no.7, 1836, of the Swiss

Années de pèlerinage), Dvořák (op.52 no.4, 1880, and four others of the same year published posthumously), and sets by Novák (op.11, 1896) and Wellesz (op.11, 1913).

MAURICE J. E. BROWN

Ecole d'Arcueil. A group of young French musicians who gathered around Satie from 1923. The members were Cluquet-Pleyel, Désormière, Sauguet and Jacob, and they took their title from the Paris suburb in which Satie spent his later years. They were first presented by Satie at a concert on 14 June 1923 at the Collège de France. The youthful audience gave them a warm reception, and a second concert was held a few days later in a makeshift theatre in the Boulevard St Germain. As a direct result of these two appearances Désormière was offered a post with the Ballets Suédois, Jacob was invited to compose the music for Achard's *Voulez-vous jouer avec moi?* and Sauguet received a commission for the opera *Le plumet du colonel*. During the next two years the group gave numerous concerts throughout Paris, though never in Arcueil, and they were much publicized in the press, notably by Cocteau. With the death of 'le Maître' (as Satie was affectionately called) in 1925, the four men gradually drifted apart.

The group had no specific programme beyond a pursuit of simplicity. They shared with Les Six the desire to create a music that was non-academic and unpretentious; again like the earlier group, they tended to be anti-Romantic and most determinedly anti-Wagner. Also, they were not unaffected by chauvinism: Sauguet's contribution to the first concert was a suite of dances for piano called *Trois françaises*, intended as a tribute to Debussy, Bizet and Satie, and, much in the spirit of Chopin's Polonaises, to their common country of origin. Two other composers, Jacques Benoist-Méchin and Robert Caby, were closely associated with the group, though never strictly members.

RICHARD COOKE

Ecole Royale de Chant. School founded in Paris in 1784; in 1795 it was absorbed into the newly founded Conservatoire. See PARIS, §VI, 5

Ecorcheville, Jules (Armand Joseph) (b Paris, 17 July 1872; d Perthes-lès-Hurlus, 19 Feb 1915) French musicologist. He studied composition with César Franck (1887-90) and while studying literature at the Sorbonne (bachelier ès lettres 1891, licencié ès lettres 1894) and history at the Ecole de Chartes, he was given an interest in musicology by Lionel Dauriac; he participated in founding the ISM (1899) and, with Dauriac and Prod'homme, its French section (1904) before studying musicology with Riemann in Leipzig (1905). He took his doctorate at the Sorbonne in 1906 with two dissertations on 17th-century French music (the Kassel Manuscripts and contemporary aesthetic doctrines).

In 1907 he transformed the ailing journal *Mercure musical* into the *Mercure musical et bulletin français de la S.I.M.* (later *Bulletin français de la S.I.M.*, 1908, *S.I.M. revue musicale mensuelle*, 1910, and *Revue musicale S.I.M.*, 1912), which numbered Debussy and Ravel among its contributors and quickly became an important mouthpiece for the modern school of composition. The Académie des Beaux Arts accepted his plan (1909) for a catalogue of the earlier material of the Bibliothèque Nationale, which eventually contained

over 10,000 incipits, and awarded him the Prix Debrousse. He succeeded Charles Malherbe as president of the Paris section of the ISM (1911) and his ideas on the internationalism of music provided the central theme of the 1914 Paris Congress, attended by over 600 musicologists of all nations. During this period he was also active in organizing concerts for subscribers to his journal, forming a federation of French music teachers, and planning to edit the complete Corpus Scriptorum de Musica and set up a commission to investigate musical iconography. He enlisted in September 1914 and died while leading his infantry company on an assault in Champagne.

Ecorcheville is remembered chiefly for his penetrating intellect, his contribution to the development of editorial practice, his dedication to scholarship, his support of new music and, above all, his devotion to the ISM (which occupied his thoughts even in the trenches). His valuable library, sold after his death, contained rare editions of early French violin and lute music.

JOHN TREVITT

Écossaise (Fr.: 'Scottish'). A kind of contredanse popular during the first part of the 19th century. It was quick and energetic, and the music was generally in 2/4 time. There were usually four figures danced in progressive combinations by the couples involved; in its later stages waltz-like turns were introduced (see SCHOTTISCHE).

The history of the écossaise is obscure. On the one hand it has been argued that its prototype was among the oldest Scottish dances performed to bagpipe accompaniment, originally of serious character and moderate movement. On the other hand Scottish origins have been

denied and it has been described simply as a French conception of what a Scots dance ought to be. The *écossaise* was familiar in 18th-century France as one of the favourite contredanses adopted by fashionable society. It came to rival even the minuet in popularity, but its character changed, and by the 19th century the quick form had replaced the earlier moderate-paced variety.

As a ballroom favourite in Vienna it elicited music from such composers as Beethoven, who wrote a number of *écossaises* for piano, orchestra and wind band between 1806 and 1810, and from Schubert, who contributed many sets for piano, including those in the dances published as opp. 18, 33 and 67. Weber dedicated his set of six *écossaises* (1802) 'to the beautiful sex of Hamburg'. Six was the usual number of dances in a set, each a binary movement of two balanced eight-bar strains. Beethoven unified his E♭ set (WoO 83) by making the second strain of each of the six dances identical. Chopin's three *écossaises* (op. 72 no. 3) are structurally somewhat exceptional.

The word '*écossais(e)*' also appears in titles simply to indicate that a piece is supposedly Scottish in origin or in some feature of style (e.g. Glinka's *Thème écossais varié*, based on the Irish tune *The Last Rose of Summer*, and John Field's *Rondeau écossais*). The *écossaise* in Jeremiah Clarke's Suite in D, however, simply belongs to the popular post-Restoration genre of the SCOTCH TUNE.

MICHAEL TILMOUTH

Ecuador. South American republic

I. Art music II. Folk music

I. Art music. There is substantial documentary evidence of relatively important musical activity in colonial Ecuador, but no polyphonic work by musicians active in Quito, Cuenca and Guayaquil has yet been found. In view of the splendid development of colonial architecture, painting and sculpture related to the church, it is likely that there were similar accomplishments in music.

The transplanting of European music to Ecuador began with the establishment in Quito in 1535 of a Flemish Franciscan order (by the monks Josse de Rycke of Malines and Pierre Gosseal of Louvain) in which the teaching of music was important. Indians were taught plainchant, mensural notation and performance on the main families of European instruments, particularly at their Colegio de S Andrés (founded 1555), where the standard was such that by 1570 even Francisco Guerrero's difficult four- and five-part motets could be performed. The mestizo Diego Lobato (c1538-1610), was appointed *maestro de capilla* at the cathedral in 1574; documentary evidence suggests that he composed *motetes* and *chansonetas*, but none have been found. Gutierre Fernández Hidalgo (1553-1620), considered the paramount South American Renaissance composer, came from Bogotá to succeed Lobato as *maestro de capilla* in 1588, but his stay in Quito was too short to be of lasting significance in the cathedral's

musical life. In 1682 the chapter appointed another distinguished composer, Manuel Blasco, from Bogotá; his works (now in the Bogotá Cathedral archive) include an eight-part *Confitebor-Laudate Dominum-Magnificat*, a 12-part *Dixit Dominus*, a 12-part *Laudate Dominum* (1683), a 12-part *Magnificat* and an *Officium defunctorum* (1681), all incomplete; two polyphonic villancicos (one from 1686), and *Versos al organo, con duo para chirimias* (1684). Blasco left his post at the cathedral in 1696 and was succeeded by José Ortuño de Larrea (d 1722).

There is little information about 18th-century church music in Ecuador; the city of Guayaquil seems to have superseded Quito, but no primary source remains.

After independence (1822) attempts to establish a professional musical life resulted in the foundation of a school of music in Quito, which was for a time under the direction of Agustín Baldeón (d 1847), a composer of symphonies and other orchestral pieces. This music school became the Sociedad Filarmónica de S Cecilia which lasted until 1858. Only in 1870, under the stimulus of the educational policy of the García Moreno regime, was the National Conservatory of Music founded and put under the direction of Antonio Neumann (1818-71), of German descent, the author of the national anthem and founder of the Philharmonic Society in Guayaquil. The Italian Domenico Brescia came from Santiago, Chile, to direct the conservatory in Quito, and during his years there (1903-11) established music education in Ecuador on a sounder base than had previously been possible. He was an early advocate of musical nationalism in Ecuador, with such works as *Sinfonía ecuatoriana* and *Ocho variaciones* (based on indigenous sacred songs). Several of his students adopted the nationalist style. Of these, Segundo Luis Moreno (1882-1972) wrote many works with indigenous elements, and Luis H. Salgado (b 1903) was the leading figure of his generation. His symphonic suite *Atahualpa* (1933), his *Suite coreográfica* (1946), the ballets *El amaño* (1947) and *El Dios Tumbal* (1952) and other works show strong nationalist feeling. Salgado also wrote two operas, *Cumandá* (1940-54) and *Eunice* (1956-7), that were never produced.

Pedro Pablo Traversari (1874-1956), a prolific composer and musicologist, combined a neo-Romantic style with some native characteristics. He wrote 22 dances in the style of the highlands, hymns (including the *Pentatonic Hymn of the Indian Race*), the tone poem *Glorias andinas*, and melodramas such as *Cumandá*, *La profecía de Huiracocha*, *Los hijos del sol*, all based on native legends. His teaching in the chief institutions of Ecuador, including the Central University, was influential. His important collection of native and foreign instruments is the basis of the instrument collection at the Casa de la Cultura Ecuatoriana in Quito.

Spanish Franciscan monks have also contributed greatly to 20th-century Ecuadorian music. Francisco María Alberdi (1878-1934) and Agustín de Azkúnaga (b 1885) have produced much church music, as well as secular music in native styles. Later Manuel J. Mola Mateau (b 1918), another Franciscan composer, directed the conservatory in Quito, held the position of cathedral organist and founded a school of church music.

Local conditions have not favoured the development of advanced techniques of composition. The younger generation of composers has not followed modern

European developments, with the notable exception of Mesías Maiguascha (*b* 1938), who was a student of Ginastera at the Di Tella Institute, Buenos Aires, and has been working in Cologne for several years. He has adopted the atonal idiom and has occasionally employed more modern techniques

II. Folk music. The Ecuadorian population of Indians, mestizos, blacks and Europeans (*creoles*) is distributed over three geographical areas. The first is the Sierra, including Andean regions with Quechua-speaking Indians as well as some black groups in Chota and Salinas (Imbabura) and Santo Domingo de los Colorados (Pichincha). The second, the Oriente, consists of two parts, the Montaña to the south, inhabited by Jivaro Indians, and the Selva, which extends to the Amazonian jungle and is inhabited by pre-agricultural Indians such as the Cofán, some of whom have undergone a degree of acculturation through missionary contact. The music of these Indians, however, has been insufficiently studied. The third area, the Litoral, includes blacks living in Esmeraldas and Manabí and descendants of all four racial groups, generally called *montubios*, living along the coast. The islands (including the Galápagos) constitute another sub-area of the Litoral, with their centre in Guayaquil: the population is predominantly *creole*, of Spanish descent. Each of these peoples and areas has its own distinctive music.

1. Collections and sound recordings. 2. Jivaro music. 3. Indian music of the Sierra. 4. Mestizo music of the Sierra. 5. Hispano-Ecuadorian music. 6. Afro-Ecuadorian music.

1. COLLECTIONS AND SOUND RECORDINGS. M. Jiménez de la Espada's collection of indigenous dances, arranged for chorus or solo voice with accompaniment, is an example of late 19th-century collections. The first systematic work on Inca music was by M. and R. d'Harcourt and included 52 Ecuadorian melodies. In 1916-18 and 1929 Rafael Karsten studied the music of the Jivaro Indians. Ecuadorian music has been most thoroughly investigated by Segundo Luis Moreno, whose research was based on pieces he and Raymundo M. Monteros transcribed by ear from live performances. Recorded sources are in the Instituto Ecuatoriano de Antropología y Geografía, the Casa de la Cultura

Ecuadoriana and the Instituto Azuayo de Folklore (all in Ecuador). The Instituto Lingüístico de Verano conducts investigations in the eastern jungle and provides research assistance. In 1958 a member of a filming expedition, C. Luzuy, taped some Jivaro music which was later analysed by the Ecuadorian musicologist Iñés Muriel. A disc of black music recorded in the frontier region between Ecuador and Colombia has been published by the anthropologist Norman W. Whitten Jr. In 1968 Ramón y Rivera and Aretz collected 176 pieces in Ecuador: these, with their corresponding documentation, are deposited in the archives of the Instituto Interamericano de Etnomusicología y Folklore in Caracas

2. **JIVARO MUSIC.** The Jivaro, who have inhabited southern Ecuador and northern Peru since pre-Columbian times, have a culture typical of the tropical forest: they subsist by hunting, fishing and minor cultivation and are especially known for their warlike disposition and head-hunting. According to Muriel, the Peruvian Jivaros have certain instruments currently unknown to the Ecuadorian Jivaros; the latter use *túnduy* (slit-drums) to transmit signals, double-headed drums to communicate with spirits and flutes with two finger-holes. Moreno (1949) noted the use of reed transverse flutes with two holes and a reed *pingullo* (fipple flute) with three finger-holes. Jivaro songs are generally spells or supplications sung for specific purposes. Shamans sing special songs, often accompanied by the drum. According to the transcribed sources, a restricted scale characterizes this music. Melodies are tritonic, equivalent to a major triad, resting on the fundamental, as in ex. 1, although intonation

Ex. 1 Shaman's supplication (Moreno 1930)

Allegro

may be slightly higher or lower in pitch. The rhythm is distinctive in each song, but is also irregular. According to Moreno the same tritonic scale has been found on archaeological specimens of fipple flutes from the coastal region of Ecuador

3. **INDIAN MUSIC OF THE SIERRA.** The descendants of the Quechuas, who once peopled the Andes from northern Argentina to Ecuador, maintain a distinctive pre-Columbian musical heritage with characteristic instruments and styles. One of their instruments is the *pallahua* or *pashagua*, a type of panpipe found in archaeological sites in Manabí. In Imbabura province similar panpipes are played, singly or in sets, sometimes accompanied by a fipple flute (*kena* or *pishacotullo*) and a drum (fig. 1). Both types of aerophone play a part in

ritual feasts. The Sierra Indians also play transverse flutes of varying sizes with five finger-holes, including flutes of large diameter, called *tundas* after the name of the cane from which they are made. However, the *quena* (notched flute) is not found. The *curiquingue* or *curiquinga* is a pre-Columbian dance in which dancers in costume imitate the flight of the bird of prey of that name. The *yumbo* is one of the most important indigenous dances of the mountain area. The dancers, also called *yumbos*, representing an eastern tribe of the same name, carry wooden spears to symbolize a large invasion that took place in the 4th century AD in the central provinces. They celebrate festivities connected with the equinox cycle and religious feasts such as Corpus Christi, Christmas and the Virgin of the Snow by enacting plays such as *La matanza*. The *yumbos* are sometimes joined by dancers representing devils. (They have been described by Moreno (1949), Costales Samaniego and A. de Carvalho Neto.)

The indigenous repertory also includes many lively dance-songs and instrumental pieces accompanied by drums. Melodies fall into one of the five modes of the anhemi-pentatonic scale. Short repeated descending phrases and binary rhythm are also characteristic, as in ex 2, a *curiquinga*. This *curiquinga* is similar in structure to the Ecuadorian *vanquimuto* (see §5). Indian Quechua poetry is also distinctive, and differs markedly from Spanish verse traditions.

Ex 2 *Curiquinga* dance (Moreno, 1949)

Marchal $\text{♩} = 120$

Religious songs are rhythmically free and sung in a whining voice, with marked portamentos. There are also recitative-like songs commemorating the virtues of the deceased. Work songs accompany sowing and reaping, cooking maize and preparing the *vamor* or *chicha* (fruit liquor). According to Guevara the Indians who inhabit the provinces of Chimborazo, Cañar and Azuay, descendants of the Puruhâes and Cañaris, accompany the *munga* (communal work) with songs and drum music, as in pre-Columbian times. They also sing *tonos* to celebrate a marriage and to bless a new home, and other songs and instrumental pieces connected with tending and herding sheep.

4 MESTIZO MUSIC OF THE SIERRA. In Ecuador, as elsewhere in Latin America, the indigenous celebration of the solstices was assimilated to the Christian festivities. The groups of disguised dancers who perform on these occasions are called *danzantes*, and therefore the corresponding music is known as *danzante*, although it may also be called *tono* or *toque*. These melodies belong to a type characterized by its 6/8 rhythm, usually divided

quaver-crotchet followed by three quavers, as in ex.3, a *danzante*.

Ex 3 *Danzante* (Moreno, 1949)

Allegro $\text{♩} = 112$

Some pieces make use of the Spanish sesquialtera rhythm, alternating 6/8 and 3/4 time. The accompaniment on the *tamboril* (drum) provides a rhythmic figure that may be crotchet-quaver or quaver-crotchet. Often, however, the melodies are characterized by the binary rhythm typical of the Quechua *huayno* dance as practised in Peru and Bolivia. Many of the pieces are based on a pentatonic scale, as in Sierra indigenous music, although diatonic scales are not uncommon. Melodic doubling in 3rds, common in creole music, has been adapted to the *rondador* (panpipe). Among the European instruments adopted by the Indians are the *pifano* (transverse flute with six finger-holes, made of cane, cut at the node or otherwise stopped at the upper end with a block of wood or wax) and the diatonic harp, the most characteristic Ecuadorian chordophone (fig.2)

2. Ibarra (diatonic harp), 1968

5. HISPANO-ECUADORIAN MUSIC. The repertory of the creoles or Spanish descendants includes lullabies, children's play songs and villancicos, and religious music (especially Passion music), in which the Spanish origins are particularly evident. Other forms in the creole repertory are the *pasillo*, the *pasacalle* and the *sanjuanito*. The *pasillo*, also found in Colombia, is a popular genre derived from the waltz, danced on a variety of occasions throughout Ecuador. It is well documented in both literature and recordings; frequently the *pasillos* are by known composers. Other forms are more localized, such as the *cachullapi*, a lively dance-song of a popular character in 6/8 metre, performed by regional bands during festivals and bullfights (see Carvalho Neto). Another popular genre is the *pasacalle*, of Spanish origin. While the Spanish *pasacalle* is played to accompany promenades through the streets, the Andean *pasacalle* has many diverse musical styles, some of which are intended to accompany dancing, as they do in Ecuador. The *sanjuanito*, a dance in duple time, is performed at celebrations in honour of St John, for whom there are many local shrines in Ecuador, although the name could also be derived from *huayno*, to which it is clearly related musically.

Instruments include the diatonic harp, *bandores* or mandolins, six-string guitars and guitars with four double courses, all of which are manufactured locally. The musical style is characterized by the use of parallel 3rds and harmonic accompaniment on guitars (*rasgueado*) and harp (*punteado*). The European major and

minor scales are used, as well as other diatonic modes. The sung repertory includes the *contrapunto* (song whose text is improvised by alternating poets), sung by *montubio* singers, *coplas* sung during carnival time; and songs of a romantic type such as the *albazo* or serenade and the *yaravi*. A special genre of dance-song may be heard in Chota (Carchi province): called the *bomba* (or sometimes *corrido*) the name is usually qualified, as in 'dance *bomba*' or 'Christmas *bomba*' or related to its texts, which are usually descriptive. Many pieces in the repertory are by known composers, who are usually the performers themselves. The accompaniment is provided by an 'orchestra' consisting of guitar, *bomba* (bass drum) and *rasqueta* (scraper, see fig.3), or by a *banda mocha* ('clipped', see fig.4, p.834): this includes various aerophones made from gourd or hollow canes (or *cahuaya*), a drum and cymbal, and a European trumpet which leads the ensemble. The rustic aerophones are called *pistón*, *sarso* (from saxophone), *bajo*, *bajo andante* and *barito* (from bass and baritone). Contrary to popular theory, and despite the African origin of many of the inhabitants of the Chota, this music does not have African characteristics. Songs connected with cattle-herding are also found in the Chota province.

6. AFRO-ECUADORIAN MUSIC. In the music of certain groups of African extraction living in the coastal area there is a characteristic timbre, resulting from the use of instruments of African origin. The most important of these is the marimba (xylophone), forming the basis of

3. Guitar, *rasqueta* (scraper) and *bomba* (bass drum) for the dance-song *bomba*, Chota, 1968

Ex.4 *Bambuco*, transcr. L. P. Ramon y Rivera (Ramon y Rivera, 1967-8)

The musical score is for a piece titled 'Bambuco'. It features three instrumental parts: Marimba (top staff), Bombo a Cucluno (middle staff), and Maraca a Guacharaca (bottom staff). The Marimba part includes markings for 'triple', 'freely', and 'p' (piano). The Bombo a Cucluno part includes a 'bordon' marking. The Maraca a Guacharaca part includes a 'p' marking. The score includes vocal lines with lyrics in Spanish: 'A la ma no ma no voy no voy a voy por-que no ten-go'. The score also includes a 'CHORUS' section and a 'solo' section. The tempo is marked 'freely' and the dynamics include 'mf' (mezzo-forte) and 'p' (piano).

instrumental ensembles in Esmeraldas province, other instruments include the *cununo* (single-headed conical drums, designated 'male' and 'female'), the *guacharaca* (shaken idiophone, made from a piece of bamboo containing achira seeds, also called *alfandogue* or *guasá*), and maracas, played singly by both men and women. The music is performed in the 'marimba house', where the instruments are kept, hanging from the ceiling. Here the *marimberos* (marimba players) and performers on other instruments accompany male and female singers and dancers. The women singers can perform as soloists or in chorus as *respondedoras* to the leading male singer: much of this *baile de la marimba* (marimba dance) music is responsorial, as in the *bambuco* (ex.4). Men or women can also sing in alternation, one strophe to each singer, as in a *caramba* recorded by Ramón y Rivera (1968).

The repertoire includes various types of dance-song, the *torbellino*, *bambuco* (which bears no relation to the Colombian *bambuco*), *patacoré*, *caramba* and *agua larga* (which is also called *fuga*, and incorporates elements of creole music). Particular characteristics of Afro-Ecuadorian music are imprecision of pitch in the case of such instruments as the marimba; pitch variation

between repeats of a melody or bass line; parallel 3rds; the almost continuous use of syncopation; and melodic independence from the accompaniment, resulting in polyrhythm (ex.4). In San Lorenzo the local repertoire also includes lullabies for the infant Jesus and for 'little angels' (or dead children), as well as *salves* and *loas* for St Anthony and other saints, a notable example of religious syncretism.

GERARD BÉHAGUE (I), ISABEL ARETZ (II)

Eddy, Clarence (b Greenfield, Mass., 23 June 1851, d Chicago, 10 Jan 1937). American organist and composer. He first studied the organ under Dudley Buck at Hartford, Connecticut; in 1871 he went to Berlin and studied under Haupt and Löschhorn. On his return to America in 1874 he played church organs and became prominent as a teacher. He gave organ recitals in many cities of the USA as well as in Europe. In 1876 he published a translation of Haupt's *Theory of Counterpoint and Fugue*. He composed many pieces for the organ.

RICHARD ALDRICH/R

Ede, Gilles [Aegidius] **van den**. See EEDEN, GILLES VAN DEN

Edel, Yitzhak (b Warsaw, 1 Jan 1896, d Tel-Aviv, 14 Dec 1973) Israeli composer and teacher of Polish birth. He was brought up in his grandfather's hassidic home, where he absorbed Jewish folk and liturgical music and learned to play the violin. A period in cosmopolitan Russia (1913-22) caused him to doubt the significance of his Jewishness, but back in Warsaw he regained his faith through Zionism. He taught music in Hebrew high schools, conducted the Hashomer Hatzair Choir and founded the Hevrat Dorshei Musika Ivrit (Society for the Promotion of Hebrew Music) in 1928. In the previous year he had graduated from the State High School of Music, where he concentrated on theory and composition under Rytel and Statkowsky, though the violin was his principal subject. He moved in 1929 to Palestine, where he worked as a teacher and choir director at the Lewinsky Teachers' Seminary for 36 years, his aim being to develop his pupils' Jewish consciousness. A deep attachment to Jewish musical traditions is evident in almost all of Edel's modal themes, and is fully expressed in the hazanic recitatives of his major work, the folk cantata *Lamitnadvim haam* ('To the volunteers of the people'), and other compositions. His skill in developing and transforming these favourite materials into unified classical structures is best shown in the Capriccio, the Israeli Dance and the *Tehilim* ('Psalms').

Edelawer, Hermann. See EDLERAWER, HERMANN.

Edeling [Edling], **Johann** (b. Falken, nr Eisenach, c1750, d. Weimar, ?1786). German clarinetist and composer. He was a clarinetist in the Weimar court orchestra. Gerber mentioned symphonies and other instrumental works by him, but his only extant published work is the incidental music for Friedrich Justin Bertuch's tragedy *Elfriede*, consisting of introduction, interludes, a ballad and pantomime music (vocal score, Berlin, 1789). Although Bertuch's play was first produced in 1773 at Weimar, Edeling's music seems to have been written for a revival in 1787.

ALFRED LOEWENBERG, R

Edelmann, Jean-Frédéric [Johann Friedrich] (b. Strasbourg, 5 May 1749, d. Paris, 17 July 1794). Alsatian composer, harpsichordist and pianist. He studied law at Strasbourg University, and in about 1774 moved to Paris, where he at first lived at the home of the music patron Baron Bagge. He quickly gained fame as a composer in the Italian style and as a harpsichord and piano teacher (his pupils included Méhul and Jean-Louis Adam, father of Adolphe Adam). About 1781 he may have made a trip to London, as an edition of his op. 9 bears the imprint 'Sold by the Author in London'. After returning to Strasbourg in 1789 he was appointed administrator of the Lower Rhine. He was soon involved in a factional dispute with the mayor of Strasbourg, Philippe-Frédéric Dietrich, Edelmann's former classmate at university and a close associate in Paris. Edelmann's deposition and evidence against Dietrich played a part in the latter's execution in 1793. Following various intrigues Edelmann and his brother, the organist and keyboard maker Geoffrey-Louis (or Gottfried Ludwig) Edelmann (1753-94), were also guillotined, though their names were officially cleared during the subsequent reaction against the Reign of Terror. The reputation for treachery imputed to Edelmann by Gerber and later commentators is apparently unfounded.

During his lifetime Edelmann's works were widely published and reprinted throughout Europe and won the praise of such observant critics as Mozart (letter of 14 October 1777). He was among those who supported the growing popularity of the piano in France. Although his last collection (op. 16, 1788) is the only one whose title-page names the piano as an alternative to the harpsichord, dynamic markings in all the works suggest that he wrote with the piano in mind. The theatrical quality of the instrumental works may derive partly from his association with Gluck, several of whose works he arranged for keyboard (his supposed study with Gluck, however, remains undocumented). The keyboard often imitates orchestral instruments, and the works feature

rapid dynamic changes, frequent use of the minor mode and many expressive, even sentimental, directions or sub-titles. In the sonatas for accompanied keyboard the violin plays only a subordinate role, doubling the melody or filling out the harmony. Edelmann's tendency to avoid complex structures and polyphonic textures may have been the result of inadequate training. His short opera *Ariane dans l'île de Naxos* (1782), praised by Grimm and dedicated (ironically, in the light of later events) to Guillotine, continued to be produced in various European capitals (and perhaps in New York) as late as 1810.

RITA BENTON

Edelmann, Moritz (b. Greiffenburg [now Gryfów Śląski], Silesia, d. Zittau, 6 Dec 1680). German composer and organist. His first documented position was as organist at Torgau between 1660 and 1663. From the latter year he lived at Halle, first as organist of St Ulrich, then, from 1672, as organist to the court of Duke Albrecht as well as at the Liebfrauenkirche and the cathedral. Although his duties included the composition of a considerable amount of church music, only a single work by him seems to survive, *Triumph! denn Jesu lebt*, for five voices (in *D-Z*). In 1676 he moved to Zittau, near his birthplace, to succeed Hammerschmidt as organist of the Johanniskirche. While at Zittau he composed the incidental music (now lost) to the school plays of CHRISTIAN WEISE. Mattheson stated that in 1673 he wrote a treatise, *Vom Gebrauch der Con- und Dissonanzen*, but this too seems not to have survived.

GEORGE J BUELOW

Edelmann, Otto (b Brunn am Gebirge, nr. Vienna, 5 Feb 1917). Austrian bass-baritone. He studied at the Vienna Academy of Music with Lierhammer and Grüner Graarud, and made his début in 1937 at Gera as Mozart's Figaro. From 1938 to 1940 he was engaged at Nuremberg, but his career was interrupted when he was conscripted into the army and later taken prisoner by the Russians. In 1947 he joined the Vienna Staatsoper, where he made his début as the Hermit in *Der Freischütz*, and was soon fulfilling engagements abroad. At the first two postwar Bayreuth Festivals in 1951 and 1952 he sang Hans Sachs, a role in which he was also heard in New York and at the Edinburgh Festival. He sang Baron Ochs in the first opera performance in the new Salzburg Festspielhaus in July 1960. His repertory also includes Leporello, Rocco, Amfortas, Heinrich (Lohengrin), Gurnemanz, Plunkett (*Martha*) and Dulcamara. He was made an Austrian Kammersänger in 1960.

HAROLD ROSENTHAL

Eden, Gilles [Aegidius] **van den**. See EFDEN, GILLES VAN DEN

Eden-Tamir Duo. Israeli piano duo. It was formed in 1952 by Bracha Eden (b Jerusalem, 15 July 1928) and Alexander Tamir (b Vilnius, 2 April 1931). They both studied at the Rubin Academy of Music, Jerusalem (Tamir with Schroeder, Eden with Schroeder and Tal), graduating in 1952, in 1955 they continued studies with Vronsky and Babin at the Aspen Music Festival. They made their début in Israel in 1954, then appeared in New York (1955) and Rome (1956), where they won the 1957 Vercelli Competition, in 1957 they also appeared in London and Paris. They are directors of the Fannie and Max Targ Music Centre, Jerusalem, and Tamir teaches at the Rubin Academy. The duo have had considerable influence on the development of the repertory and have made an important contribution to the revival of neglected works for two pianos and piano duet, including works by Czerny, Clementi, Dussek and Hummel, and the original two-piano version of Brahms's Piano Quintet in F minor. Besides many works from the standard repertoires they play much contemporary music: in 1955 they gave the American première of Lutoslawski's Paganini Variations, and in 1968, with Stravinsky's permission, gave the first public performance of the piano duet version of *The Rite of Spring*. Tamir has made several transcriptions for piano duo and duet (including those of Weinberger's *Schwanda* and Rakhmaninov's Symphonic Dances), and has written a few works for piano duo, generally using electronic and *musique concrète* elements.

WILLIAM Y. ELIAS

Eder, Helmut (b Linz, 26 Dec 1916). Austrian composer and choirmaster. After graduating from the Linz Conservatory in 1948, he studied with David in

Stuttgart and with Orff and Fritz Lehmann in Munich. Eder then taught composition, basic principles and choral studies at the Linz Conservatory, where he was made professor in 1962. He was conductor of the Linz Singakademie (1953–60) and in 1959, together with Hans Paluj, he founded the first electronic studio in Linz and organized a series of concerts of avant-garde music there between 1966 and 1969. In 1967 he was appointed professor of composition at the Salzburg Mozarteum. He made a name primarily through his dramatic works, some of them broadcast by Austrian television.

WORKS

(selective list)

Chamber music, org pieces, songs, choruses, music for stage and radio.

MONIKA LICHTENFELD

Eder, Joseph. Austrian firm of music publishers. It was founded by Joseph Eder (b Vienna, 26 July 1760, d Vienna, 17 Feb 1835), who originally sold fancy goods and cheap engravings by the Prague publisher Balzer in the provinces. He later became a partner in the Vienna branch of Balzer's firm, and in 1789 its proprietor. On 16 September 1789 he opened a fine art and copper engraving shop in the Trattnerhof, Vienna, which moved from there to the house 'Zum Goldenen Krone' in the Graben on 20 June 1792. With his first music prospectus on 19 April 1794, Eder began a series of isolated attempts at publishing, which gained considerable impetus when Ignaz Sauer became a partner (of Joseph Eder & Comp.) on 2 November 1796, the partnership ended in January 1798, when Sauer founded his own music publishing firm Zu den Sieben Schwestern. Eder's brisk publishing activity is demonstrated by the fact that 511 works had appeared by 1808, the disturbances of war in 1809 and 1814, however, caused a standstill.

Eder's daughter married Jeremias Bermann (b 1770, d 2 Jan 1855), and Eder took his son-in-law into the firm in 1811 (from 25 April 1812 the firm was once again known as Joseph Eder & Comp.). At the time of the Vienna Congress (1815) numerous works appeared in joint publication with the Vienna firms Steiner, G. Cappi, Mollo, Mechetti, Mäusch, Weigl and Traeg. When Eder retired in 1817 Bermann took over the business, adopting the name Besitzer der Joseph Ederschen Kunst- und Musikalienhandlung. The firm had been stagnating since 1816; despite a revival of activity that can probably be attributed to Joseph Czerný's collaboration, from 1828 it issued printed music only sporadically. In that year Jeremias Bermann took on his son Joseph Bermann as a sleeping partner, which legal position was recorded when the firm was renamed Bermann & Son. The firm had become unimportant as music publishers, and on 19 October 1847 Jeremias Bermann returned his licence (Joseph Bermann had obtained a licence for a music business on 11 August 1847).

The firm's output consisted mainly of compositions by minor masters resident in Vienna as well as occasional arrangements of works by Haydn and Mozart.

the only original edition is Beethoven's op.10 (Beethoven's 'Pathétique' Sonata and the variations on *Tändeln und Scherzen* were taken over from F. A. Hoffmeister, and *Das Glück der Freundschaft* op.88 from H. Löschenkohl). J. B. Vanhal is represented by 60 works from his late period.

ALEXANDER WEINMANN

Edgecumbe, Richard, 2nd Earl of Mount-Edgecumbe *See* MOUNT-EDGECUMBE, RICHARD.

Edinburgh. Capital city of Scotland and its seat of government until 1707. It was the largest town in Scotland before 1800 and its artistic capital until 1880, when these features were ceded to Glasgow. Edinburgh's main periods of musical excellence were the 16th and 18th centuries, though there have been interesting, but so far inconclusive, local developments since the mid-1960s. The city's modern musical reputation, however, rests largely on its annual festival, inaugurated in 1947.

1 General history 2 Festival

1 **GENERAL HISTORY** During the 16th century Edinburgh's musical life revolved round the court at Holyrood Palace. A native school of partsong and instrumental composition grew up, modelled largely on the French school but with its own characteristic sentiment and delicacy. With James VI's removal to London in 1603 this tradition was broken, and its records nearly lost also, since music printing did not reach Scotland until 1610 and even then was rigorously controlled by the Reformed Church. Although a nominal Chapel Royal was retained at Holyrood for some decades into the 17th century, Charles I brought musicians from London for his Scottish coronation (1633). 1635 saw Edinburgh's outstanding musical publication before the mid-18th century: *The Psalmes of David*, edited by Edward Millar and printed by Andro Hart, a collection of 200 harmonized metrical psalm tunes, some set contrapuntally.

After 50 years of stagnation Edinburgh's music re-awoke with the growing fashion for Baroque music and secular concert life; the first Edinburgh public concerts are thought to have been given in 1693. In 1728 the Edinburgh Musical Society was formed and gave weekly concerts; St Cecilia's Hall was built for it in 1762. Music publishing, especially of local chamber and orchestral music by McGibbon, McLean, Oswald, Barsanti and Kelly, restarted in Edinburgh in 1727 and had grown to a sizable business by 1760; by 1800, however, it had declined to ephemeral pulp-production, a decline from which Edinburgh music publishing has not recovered, despite some fine isolated folksong publications during the 19th century.

Around 1800 improved communication with London and a sharp withdrawal of aristocratic interest in art music combined to quench local performance and com-

position. The Edinburgh Musical Society ceased to exist in 1798. However, a new popular interest in choral music led to the mounting of four Edinburgh festivals in 1815, 1819, 1824 and 1843 in the Assembly Rooms in the New Town; the Edinburgh Choral Union (later the Edinburgh Royal Choral Union) was founded in 1858. By the late 1880s there were signs that Edinburgh was ready for resident professional music-making: the Choral Union's concerts became increasingly adventurous (narrowly averting financial disaster in 1886 and 1887), interest was being taken in local composers (MacCunn, Drysdale and Sveinhjörnsen) for the first time since 1800; and an ill-fated journal, the *Scottish Musical Monthly*, appeared for a few issues in 1894. At this point, however, the Scottish Orchestra (later the Scottish National Orchestra) was formed in Glasgow; it depended heavily for its survival on regular visits to Edinburgh, and attained an unchallengeable position as Scotland's leading instrumental ensemble.

The University of Edinburgh, founded in 1583, established a music department (the first in Scotland) in 1861. Tovey, the seventh holder of the chair of music there, created the Reid Orchestra in 1916 in an attempt to provide Edinburgh with a home-based ensemble. His programme planning was highly imaginative, including both the standard repertory and pioneer performances of works of such diverse composers as C. P. E. Bach and Hindemith, but he was hampered by having to use part-time players, by inadequate rehearsal time and by an unsympathetic local press. The orchestra broadcast frequently until 1935, when the BBC formed its own orchestra in Glasgow, its most noteworthy performance was probably that of Tovey's own Cello Concerto, with Casals as soloist, in 1934.

The Edinburgh Festival (see below) was inaugurated in 1947, and has since presented an annual display of international talent; but it is generally agreed that this does more for Edinburgh's tourist trade than for its indigenous musical life. Scottish Opera was founded in Glasgow in 1962 and has given regular seasons in Edinburgh, but tended to strengthen Glasgow's position even further as Scotland's artistic centre. It was only from 1968, the year that Leonard Friedman created the Scottish Baroque Ensemble, that Edinburgh entered an era of musical professionalism comparable to that of Glasgow after 1890. The reopening of St Cecilia's Hall by the University of Edinburgh and the foundation of Napier College music department (also in 1968), together with the foundation of St Mary's Junior Music School (1972) and of the Scottish Chamber Orchestra (1974), have revitalized Edinburgh's musical life. There has also been an upsurge of interest in modern opera, unprecedented in the city's history. Premières have been given of John Purser's *The Undertaker* (Scottish Opera, 1969), Bryan Kelly's *The Queen in the Golden Tree* (Lansdowne House School, 1974), Reginald Barrett-Ayres's *Hugh Miller* (Opera Sigma, 1974), Edward Harper's *Fanny Robin* (Edinburgh University Opera Club, 1975), Robin Orr's *Hermiston* (Scottish Opera, 1975) and David Johnson's *Thomas the Rhymer* (South Side Opera, 1976). After long years of debate Edinburgh still had no opera house in 1980, despite the evident demand for one.

2 **FESTIVAL.** The Edinburgh Festival features musical and non-musical arts. It is organized by the Edinburgh Festival Society with funds principally provided by the

City of Edinburgh and the Scottish Arts Council. Since its inception in 1947 the festival's musical character has been international in outlook, with an emphasis on established artists and ensembles of wide renown performing an assortment of standard and some contemporary works. The festival usually begins on the third Sunday in August, and continues for three weeks.

The scheme grew from a suggestion by Rudolf Bing which originally aimed at finding an additional outlet for the Glyndebourne Festival (of which he had been the pre-war general manager) when its opera productions were resumed after the war, coupled with the desirability of renewing cultural contact with other countries. Bing was appointed artistic director at Edinburgh and organized the first three festivals. He was succeeded in 1950 by Ian Hunter, from 1956 the director was Robert Ponsonby, from 1961 the Earl of Harewood; from 1966 (when the appointment was renamed 'festival director') Peter Diamand; and from 1979 John Drummond.

On matters of policy and finance the director is responsible to the Festival Society, of which the chairman *ex officio* is the Lord Provost of Edinburgh with strong civic representation. The festival is dependent on a grant voted annually from city funds £20,000 in 1947, rising eventually rather than steadily to £106,500 in 1976, plus £90,000 from the Lothian Regional Council and £195,000 from the Scottish Arts Council (In 1977 the Lothian Regional Council voted not to make a grant to the festival.) Artistic aims have consequently been questioned by the civic authorities on several occasions, and increases in the grant opposed in spite of the festival's proven economic benefit to the community. This was put at more than \$35,000,000 a year (£15,200,000 at 1974 rates of exchange) by a study carried out in 1974 by the Greater Philadelphia Cultural Alliance in preparation for a planned Philadelphia Festival in 1976, and summarized in its report.

Besides its historical significance and distinctive architectural character, Edinburgh had the initial advantage for a festival of an adequate concert hall (the Usher Hall) and three principal theatres. The King's and Royal Lyceum Theatres are now municipally owned, the Empire Theatre has become a gaming-house, and from 1967 was too expensive to rent for festival purposes.

The city corporation was repeatedly advised that a festival of Edinburgh's scope and standing justified the building of an opera house, but it equally repeatedly declined to take the financial responsibility. An agreement in principle to build was nevertheless accepted in 1960; a site was reserved near the Usher Hall, and plans were commissioned from an architect. The site continued to remain vacant even after an offer by the national government in 1971 to meet half the cost of building on condition the city financed the rest. The government's offer was withdrawn in the straitened economic circumstances of 1975 and the scheme was then abandoned – one of the worst examples of civic procrastination in Britain.

Structural and electrical improvements have helped the King's Theatre to house a variety of opera productions as a primary festival feature each year. Until 1955 these were regularly presented by the Glyndebourne Festival company, except in 1952 when the Hamburg Opera became the first foreign opera company to appear at the festival. Visiting companies have successively

presented productions from: Hamburg (1952, 1956, 1958); Milan (1957); Stuttgart (1958, 1966); Stockholm (1959, 1974); Belgrade (1962); Naples (1963); Prague (1964, 1970); Holland (1965); Munich (1965); Florence (1969, 1971); Frankfurt (1970); West Berlin (1971, 1975); Düsseldorf (1972, 1976); Palermo (1972); Budapest (1973) and Zurich (1978).

In some years these have alternated with, or been supplemented by, certain domestic companies, including a further visit by Glyndebourne (1960), and seasons by the Covent Garden Opera (1961, 1965), the English Opera Group (1962, 1963, 1968, 1973) and Kent Opera (1979). Scottish Opera, formed in 1962, first participated in the festival in 1967, and has since done so in each year except 1969 and 1973. The Edinburgh Festival Opera, an ad hoc ensemble for specific productions, was first formed in 1973 to present *Don Giovanni*, which was repeated in 1974 and followed by *Le nozze di Figaro* in 1975–6 and *Carmen* in 1977.

Much attention has always been given to the scope and character of festival concerts. The standard was set by the early consent of Bruno Walter and the Vienna PO to perform at the first festival, although the inaugural concert fell to the Orchestre des Concerts Colonne from Paris, under Paul Paray. Most of the principal European orchestras have since taken part, as have several American orchestras and an annual succession of leading international solo artists and ensembles.

Attempts have occasionally been made to give some overall pattern to the planning of concerts. In 1953 the programmes illustrated 'Four Centuries of the Violin', and in 1961 Lord Harewood introduced the practice of featuring representative selections from the work of individual composers, beginning with Schoenberg, but this did not continue after Peter Diamand succeeded him. Direct commissions of new works have been few and irregular, preference being given to the repetition of contemporary works which have already made an impact elsewhere. An Edinburgh Festival Chorus (originally the Scottish Festival Chorus) was formed in 1965 with Arthur Oldham as chorus master, and has annually participated in choral concerts with widespread acclaim.

The festival has featured a variety of classical, ethnic and modern dance, with performances by domestic and/or foreign companies each year except 1965 and 1969. Some of the wider international contacts at which the festival has aimed were first established through the medium of dance: the Yugoslav Ballet in 1951 was the first participant from eastern Europe; the Azuma Kabuki Dancers from Japan brought the first oriental representation in 1955, and the Ballets Africains in 1957 was the first illustration of an indigenous African idiom.

Scotland's native musical heritage has been represented through the *ceilidh*, programmes of Gaelic songs and pipe music. What began as a demonstration of Scottish regional dancing and piping in the precincts of Edinburgh Castle developed into one of the most popular annual entertainments with a mass audience, the military tattoo, for which the organizing responsibility is undertaken by the army authorities.

Besides the official events, which have included late-night musical revue and cabaret, each festival attracts a polyglot assortment of supplementary entertainments collectively known as the 'Fringe'. Most of these ventures, utilizing all manner of small halls and other available premises, incline to forms of theatrical drama.

mixed-media and revue, but may occasionally embrace opera, dance and other music. The performances may have an amateur or professional basis, and the presentations usually include a high proportion of university representation (mainly British, Commonwealth and American).

DAVID JOHNSON (1), NOEL GOODWIN (2)

Edison, Thomas (Alva) (b Milan, Ohio, 11 Feb 1847; d West Orange, NJ, 18 Oct 1931). American inventor. He had only a few months of formal schooling, then was a newsboy and a food hawker on trains, then a telegraph operator; he was deaf from the age of 12. In 1870 he invented an improvement to ticker-tape apparatus for which he received \$40,000. He invested this in a laboratory and began the systematic pursuit of inventions that characterized the rest of his life. His chief contribution to musical acoustics was his invention (1877) of the 'talking machine' or phonograph. In some respects it resembled, in principle, Léon Scott's 'phonograph' of 1857 improved upon by K. R. Koeng. The sound was focussed through a horn vibrating a diaphragm and an attached stylus. For the phonograph, this device provided a visualization of the motion on a carbon-coated disc, but for Edison's phonograph it made a permanent record as a groove on a cylinder. For

Edison's instrument a reversal of the process provided the reproduction of the sound.

Editing. The editing of music is the art of preparing it for publication, especially music composed by someone other than the editor.

1. General 2. Music to 1400 3. Music of the 15th and 16th centuries 4. Music from 1600 to 1750 5. Music from 1750 to the present day

1. **GENERAL** The problems of editing music are so many and so varied that this article aims merely to explain fundamental principles and report some of the most widely adopted solutions for works from various periods; it cannot serve as a set of instructions for editing a particular composition or works from any one repertory, each of which poses different sets of questions and requires different solutions. The most detailed information about the techniques of editing particular repertoires can be found in the sets of guidelines prepared for editions of the complete works of individual composers and for historical editions in general. Sets of instructions for editors are sometimes printed in the first volume of a series, or separately as pamphlets. *Editionsrichtlinien musikalischer Denkmäler und Gesamtausgaben*, edited by von Daelen, contains declarations of the editorial principles followed in several series that publish music from a number of different historical periods; and Georgiades's *Musikalische Edition im Wandel des historischen Bewusstseins* includes essays dealing with the techniques of editing various kinds of music.

With some notable exceptions (like Tylman Susato's publication of Josquin Desprez' music in the 1540s, more than 20 years after the composer's death), musicians in earlier times did not show much interest in editing older music until the 18th century, as the brief history of editing in the article **HISTORICAL EDITIONS**, makes clear. With the greater confidence of past ages, and the total absence of that stylistic selfconsciousness that characterizes the 20th century, earlier editors often 'improved' on the work of the composer whose music they were editing by bringing it into line with the aesthetic and technical standards of a different age. Our greater awareness of our own ethnocentric limitations and our greater respect for the artefacts of the past have led us to set for ourselves different ideals. In general, 20th-century musicians feel that the responsible editor should try to make as clear as he can the best intentions of the composer, and he should differentiate as simply as possible between his own suggestions for realizing the composer's intentions and the markings found in the musical sources on which he bases his work. But whereas the ideals of an editor are simple to understand and easy to state in the abstract, many problems arise in practice that are either extremely difficult to resolve without great good taste, skill, patience and hard work, or else they cannot be resolved at all within the guidelines stated above, because the musical sources are either ambiguous (intentionally or not) or contradictory. Before he can finally determine all the details of his edition, the ideal editor must, first, assess the reliability of the sources that transmit the composition he is preparing for publication; second, if the composer revised his work, or changed it in any way, the editor must take all the competing versions into account; third, he must consider the original notational system and how best to translate it into equivalent or nearly equivalent

Thomas Edison with his cylinder phonograph in the West Orange laboratory, New Jersey, 1906

modern terms; fourth, he must investigate the traditional relationship between the written versions of compositions in a particular repertory and the way they actually sounded in performance; and fifth, he must make his editorial decisions keeping in mind the nature of the audience for which his edition is intended and what use they will make of it. Those five aspects of the process of editing constitute, in fact, the principal difficulties encountered by editors, regardless of the style or genre of music with which they are dealing.

If only a single source for a composition exists, an edition must obviously be based on it alone, regardless of its reliability. If the first edition of a composition is the only one known to have been prepared by the composer, if he supervised the copying of the sole manuscript source, or if a holograph of the composition survives, the editor's task in selecting the best version is made relatively simple. (Difficulties however arise when, for example, a holograph and an early printed edition supervised or used by the composer both survive, and they supply contradictory evidence; in such cases some editors, such as Georg von Dadelsen, Wolfgang Schmieder and Wilhelm Altmann, prefer to accept the readings of the printed edition, while others, such as Heinrich Schenker and Paul Mies, give preference in principle to the manuscript.) If a composition survives in a variety of sources, manuscript and printed, none of which is known to have been approved by the composer, then the editor must take pains to determine the reliability of his sources and their mutual relationships. In the first place, a careful and accurate description of the sources is a prerequisite in assessing how closely each reveals the intentions of the composer. Besides considering the contents of the entire source, the editor must often take into account the way a manuscript was put together (its structure in fascicles, for example, and whether or not there are indications that it was assembled at one time), the evidence of watermarks in helping to establish its date and provenance, the number and character of the scribes, whether or not it contains corrections (and whether they are in a contemporary or a later hand), and so on. Once they have been described, the sources must be evaluated. Some editors adopt the procedures of classical philology in attempting to establish relationships among manuscripts (filiation). Most modern editors agree that it is better to base a new edition on one good source than to publish a conflation resembling nothing that existed at or soon after the period of the work itself.

Whatever the policy in choosing a single reliable source, an editor must also test the composition for inner consistency and must correct patent errors, either by conjecture or by emending the adopted version by readings from other sources. Such corrections and emendations must be noted in the edition, either in footnotes or in a critical commentary. No consensus of opinion has been reached, however, about the additional information that needs to be included in a critical commentary: musicians increasingly agree that a comprehensive list of variant readings from all sources serves little purpose. Masses of small details are so difficult to control that most supposedly comprehensive lists contain many errors and omit much. Moreover, long lists of uncritically assembled variants are not only untrustworthy but also difficult to use, since unimportant details are mixed with significantly different readings in a jumble that is virtually impossible for the

reader to disentangle. It may be, then, that if a critical report were to include ample descriptions and evaluations of each of the sources, the list of variant readings could best be restricted to important or musically significant differences.

If a composer changed his composition in some way – by reworking some passages, for example, or by revising the orchestration, deleting sections or rearranging them – the editor must make an interpretative judgment about the version that he intends to publish. Such judgments are seldom easy to make, and there are apt to be valid arguments to support every possible alternative. It does not always follow that the composer's final judgment on the form his work should take must be respected. Composers of opera in the 18th and 19th centuries, for example, often wrote new arias for revivals and rearranged sections or roles to meet local conditions; in such cases, a version of the opera close to that of its first performance may be most appropriate for the critical edition of the work (an attitude taken by the editors of the new edition of the works of Rossini). Some might argue, too, that the versions of Bruckner's symphonies and Musorgsky's operas made by musicians other than the composers are to be preferred to the originals on aesthetic grounds, although others hold the view that an editor has the responsibility to present all the evidence in a way that enables each reader to form his own opinions.

Editors must carefully consider the nature of the notational system originally used for the composition they intend to publish in order to decide how best to make the composer's intentions intelligible to performers and scholars. Such problems become more acute the earlier the music. But even 19th-century scores raise problems not easily solved. Puccini, for example, often wrote phrase markings into his composing scores that were later translated (by someone else) into practical directions for bowing and articulation, the modern editor must accordingly decide whether to indicate his musical intentions (leaving the performer to adapt them for practical use), or to include the tonguing and bowing marks from the scores used at the first performances under the composer's supervision (while possibly leaving the scholar or conductor in doubt about Puccini's original conception). 18th- or 19th-century scores sometimes indicate phrasing and articulation in an abbreviated fashion, one or two slurs, for example, serving to indicate that an entire movement or section should be phrased in similar fashion; in such cases, an editor must sometimes make difficult decisions about the original intentions of the scribe or composer. Moreover, not all 18th- and 19th-century performing directions mean the same now as they did when they were first used, and an editor must decide whether to leave the original markings and explain their meanings in a footnote or preface or to change the markings to correspond with their current meaning. Following the general principle that it is best to present the evidence in a way that allows each individual to form his own judgment, the former course is generally to be preferred, especially since the precise meaning of many earlier signs of articulation and ornamentation may be in doubt (or may have expressed some ambiguity or a possibility of choice on the part of the performer).

The notational systems of music before 1600 are so different from current ones that the problem of translating them into equivalent or nearly equivalent modern

terms is more difficult than for later music, and in some cases it is insuperable. Diastematic notation of some medieval monophony and polyphony indicates only the general shape of a melody already known to the performers who used the manuscripts; and the notation of secular monophonic music in the Middle Ages and some early polyphony does not indicate rhythm precisely (or else scholars do not agree about its meaning). Modern editions of those repertoires necessarily involve a high degree of speculation and subjective conjecture on the part of the editor.

With later medieval and Renaissance polyphony, the meanings of almost all rhythmic signs are clear (although there is still some doubt about the precise significance of, say, proportional signs). But the question arises about how best to indicate the original longs, breves and semibreves in modern note values. To transcribe a breve in 16th-century polyphony as a modern breve, for example, may mislead modern musicians into supposing that the tempo of the music was very slow. On the other hand, to transcribe a 16th-century breve as a modern minim presents a note picture that is equally misleading in suggesting too fast a tempo; most modern editions of 16th-century music thus transcribe breves as semibreves. For that reason modern editions are traditionally said to be in a rate of reduction of 2:1 (and 13th- to 15th-century music is generally reduced by 4:1, 8:1 or even 16:1, depending on the period and style). It might be better to call such a change one of 'translation' rather than of 'reduction', that is, the modern note values purportedly suggest to modern musicians approximately the same musical responses as the original notation did to earlier musicians.

Moreover, most polyphonic music before 1600 is transmitted not in score but as separate parts without bar-lines (either laid out on two facing pages of a manuscript in so-called choirbook format, or in individual partbooks). The process of making a score from the parts inevitably raises the question of barring. Many scholars have felt, however, that bar-lines imply a strong metrical structure, foreign to many of the musical styles of the late Middle Ages and the Renaissance, in which melodic lines unfold in irregular groupings of note values. To avoid this difficulty Heinrich Besseler devised *Mensurstriche* – lines that go between but not across the staves at regular intervals – to make clear the way the musical lines coincide while preserving their irregular rhythms. Following Besseler's lead, many modern editors have used *Mensurstriche* in their editions of Renaissance music, even though Lowinsky has shown that the earliest scores, beginning in the mid-16th century, did in fact use regular barring across the staves. Various other solutions to the problem of metrical organization in 15th- and 16th-century music (like Gombosi's irregular bars, which in effect furnish an analysis of the rhythmic foreground of a composition, or Van Crevel's *tactus* wedges, small triangles placed above the staves at regular intervals) have not been widely adopted.

A central difficulty in preparing editions that attempt to reveal the composer's intentions and yet supply modern musicians with versions of the music from which they can perform concerns the fact that composers in earlier times often left aspects of their compositions incomplete in order to accommodate the desires and resources of varying groups of performers. In short, there was often a discrepancy between the way

a composition looked on paper and the way it sounded in performance. Thus composers in the 17th and 18th centuries supplied by means of figured basses more or less complete sets of instructions to keyboard players for inventing their own accompaniments, but the character of the accompaniment – whether thick- or thin-textured, contrapuntal or homophonic, or imitative or chordal – was left entirely to the judgment and good taste of the player, who might vary his realization according to the kind of instrument he played, the number and proficiency of the musicians he accompanied, the size and acoustic of the hall, and so on. Thus no ideal realization, equally appropriate for all circumstances, can be made; and Baroque composers notated their music in the most efficient way possible to achieve good performances by leaving some options open to the performers. Some modern editors, among them those responsible for the Neue Bach-Ausgabe, have adopted the attitude that respect for the composer's intentions suggests that the figured basses be left unrealized, even though that decision makes the music more difficult of access to musicians not trained in Baroque performing techniques. Other modern editors, including many of those who make so-called 'performing editions' of Baroque music, write out their realizations in four real parts that seem more like academic exercises than stylish and idiomatic versions for performance. But stylish and idiomatic versions – like the musicianly realization by Thurston Dart of Purcell's *Dido and Aeneas*, a model of its kind – are open to the charge that they are personal and idiosyncratic, and not equally appropriate for all conditions and occasions. A middle ground between the two extremes of a wholly idiomatic realization and a full contrapuntal one has also been sought by some editors, who supply a thin and mostly chordal accompaniment fashioned in a way to enable the inventive performer to devise a more elaborate part relatively easily, and yet minimally acceptable as it stands. That solution, too, is not completely satisfactory.

Similar irreconcilable problems face the editor of music from before 1600, much of which fails to indicate compositional details that later came to be considered a part of the original conception of a work. Thus 15th- and 16th-century composers omitted accidentals that they evidently expected performers to supply by the rules of *MUSICA FICTA*. 14th- and 15th-century composers failed to make clear their precise intentions with regard to the way syllables of text fitted the notes. Throughout the Renaissance and probably earlier, certain composers tolerated (and some may even have encouraged) a degree of unwritten melodic ornamentation in performance; and most allowed and expected performers to score compositions for the combinations of voices or instruments (or both) that seemed to them best. The evidence of the sources seems to suggest that all these aspects of a composition were a part of the largely unwritten tradition of *PERFORMING PRACTICE*, that is, features of the music that the composer had not fixed immutably, either in writing or in his mind. Accidentals, for example, had to be applied differently if certain kinds of instruments without a full chromatic compass were employed, and depending upon the kind and amount of ornamentation added. It seems likely that much music in the 15th century was composed without attempting to invent melodic lines that expressed either the meaning or the formal structure of the text in all its details; hence singers may have been trained to apply

the text to music following conventions that may have changed from time to time and from place to place, and that survive only in late and partial explanations. Moreover, most music in the Renaissance did not exploit the idiosyncrasies of particular instruments or of the human voice, and hence it can be performed – and was evidently intended to be performed – by varying combinations of musicians: unaccompanied singers, instrumental ensembles, some combination of the two, or even in arrangements for solo voice (or voices) and lute (or lutes). The modern editor who attempts to fix in writing a version acceptable to the composer or the performers of the time runs the risk of misleading modern musicians by implying that the printed version is the only acceptable, or the best, one. On the other hand, the modern editor who includes only as much information as he can convincingly demonstrate was a part of the composer's original fixed intentions may produce a quasi-facsimile that must be 'edited' again (either in writing or in performance) before it can be used. And there seems to be no single solution to the problem of editing medieval and Renaissance music that does not involve equally unsatisfactory compromises between scholarly idealism and pragmatic realism.

The final form an edition takes must be determined in large part by the purpose for which it is intended, whether for scholars in libraries or performers in the concert hall. On one extreme, a facsimile of the original source, or a diplomatic transcription which attempts to translate into modern typography all the details of the original, will satisfy some needs better than a more heavily edited version. For many purposes scholars can work with facsimiles nearly as easily as with the original printed scores or manuscripts, and even performers have begun to realize the importance of learning to play directly from old notations, an exercise that illuminates many aspects of performing practice by forcing musicians to solve problems in the way their earlier counterparts did. So-called Urtext editions – which purport to reproduce the composer's score without editorial intervention – are a special kind of diplomatic transcription. The term is used chiefly in connection with German editions of keyboard music of the late 18th and early 19th centuries, for which the earliest printed edition (or the version in the collected works of a particular composer) clearly offers a good reading of the compositions. Urtext editions gained wide acceptance among 20th-century musicians who were reacting against the heavily edited versions of the German classics made by virtuoso performers or famous teachers of the late 19th and early 20th centuries.

At the other extreme, some editions attempt to include all the information necessary for a performance of the composition: precise tempo indications, detailed dynamics, phrasing and articulation markings, and so on, and even, for medieval, Renaissance and Baroque music, suggestions for scoring and ornamentation. Such decisions about the details of performance go beyond what can be demonstrated as historical truth, and at least some of the suggestions are based on an intuitive understanding of the music, presumably on the basis of the editor's superior knowledge of the style. Such editions are as necessary and valuable as facsimiles, but serve different needs. Heavily edited 'practical' editions make the music immediately accessible to a wide range of musicians, and furnish a basis for a continuing scholarly dialogue about the state of knowledge of older

performing practices. Moreover, if the editor has taken care to distinguish his emendations and suggestions from the information supplied by the original sources, many performing editions can at the same time satisfy scholarly standards.

The purely scholarly edition, which carefully indicates all or at least the most important variants and reproduces as many of the features of the original notation as the editor supposes are important to an understanding of the composer's intentions, has the great advantage of presenting all the information necessary for each individual to form his own judgment about any particular feature of the work. But that advantage is sometimes won at the expense of presenting a complicated note picture. Moreover, scholarly editions do not necessarily concern themselves with those aspects of the score that most help the musician to prepare a convincing performance. Scholarly editions are thus sometimes difficult or impossible to use for performances without more or less extensive re-editing. Performing editions which include detailed instructions for phrasing, tempo and dynamics, but place little emphasis on variant readings and the less obviously practical features of the original notation often simplify the note picture to make the volume easier to play from, but may do so at the expense of including enough information to allow a critical user to challenge any of the editor's decisions. Obviously the desire to show the performer exactly what to play, without giving him confusing alternatives, must to some extent conflict with the scholar's desire to present all the evidence, whether or not its relevance is immediately clear. Moreover, performing editions run the risk of introducing the precepts and prejudices of the editor's own time, thus obscuring or obliterating altogether the composer's intentions. In many cases, of course, a combined-purpose edition, offering enough essential source information for scholars with enough practical advice about interpretation for performers, is not only possible but desirable, and in fact there are relatively few practical editions that cannot be used at all by scholars, or scholarly editions that are impossible to adapt for performance.

Along with establishing the best version of the notes of a composition, editors of vocal music must in addition take responsibility for editing the literary text set by the composer. The sources of the text may need to be investigated separately from the sources of the music in an effort to ensure that the words appear in the form intended by the composer. Moreover, whenever possible, editors should help the scholar or performer by furnishing translations of obscure or difficult texts into languages known to the audience for whom the edition is intended. In many instances, and probably more often than is now the case – the text should be established by a philologist as expert in literary matters as the principal editor is in musical ones.

Not the least of the editor's tasks is to supply the publisher with a clean copy of the music, carefully written out and ready for the printer. Copy should be carefully read over before being sent to a publisher, and editors should try to be consistent about matters of detail. For example, they need to adopt a standard policy about key signatures (whether or not to modernize them); about the order of instruments in an orchestral score (whether or not to retain the composer's original layout or to follow modern conventions); about the transposition of orchestral instruments; about clefs

(whether to preserve C clefs, for instance, or to make use only of treble, bass, and treble transposed down an octave); and other such apparently minor matters that, unattended, may needlessly delay publication or, after publication, will confuse those who try to play or study the music. Donato's *Preparing Musical Manuscript* (Englewood Cliffs, NJ, 1963) gives detailed instructions for copying music clearly and unambiguously; and the small pamphlet *Editing Early Music* (London, 1963), prepared by editors from Novello and Co., Oxford University Press and Stainer & Bell, offers excellent practical advice in succinct form on the preparation of printer's copy.

2. MUSIC TO 1400. Some early chant manuscripts and a few sources of medieval polyphony, such as the Winchester Troper, indicate neither the precise pitch nor the rhythm for each note. Musicians who wish to study these repertoires must work either with the original sources or with facsimiles. Properly speaking an edition cannot be made, since the sources do not furnish sufficient information to clarify the nature of the music. Scholars can get an approximate idea of the music by comparing whatever versions exist of the same compositions in later and more fully notated manuscripts, or they can make largely conjectural transcriptions, based not on verifiable evidence but on intuition. Similarly, music originally notated in a system that indicates pitch clearly but not rhythm – plainchant, secular medieval monophony and early polyphony – poses almost insurmountable problems to the editor.

The desire to reinstate Gregorian chant in its proper place in the Roman Catholic liturgy furnished the most important impetus to the preparation of new editions. In the late 19th and early 20th centuries scholars in the Benedictine monastery of Solesmes in France, Pothier, Mocquereau and others, led the investigation which resulted in the publication of the *Liber usualis* and many other chant books, and Paléographie Musicale, a series of facsimiles with extensive commentaries and some transcriptions. To an extent the practical requirements of the liturgy have conflicted with the purely scholarly aims of discovering and understanding the earliest forms of the chants. Pothier and his circle, for example, were not above composing some chants and were understandably more interested in the place of music in the liturgy than in historical and philological research. The liturgical reforms of the Second Vatican Council, which reduced the importance of chant, may, paradoxically, stimulate more historically and paleographically centred studies of the repertoire.

One of the central concerns of chant scholars has been the interpretation of rhythm. The monks of Solesmes believe that all notes are equal in duration, in opposition to the mensuralists (Jeannin, Dechevrens and others), who claim that early medieval manuscripts indicate at least two durations, long and short. Even the Solesmes school, however, has not been unanimous in its interpretation of rhythm. Pothier, an 'accentualist', believed that chant should be stressed according to word accent, whereas his student Mocquereau, whose views have prevailed in the Solesmes editions, rejected the view that text accent is the principal rhythmic element in favour of a more complex theory that sees chant divided into groups of two, three or more notes, each group articulated by a stress or ictus more or less independent of the text. The chant editions prepared by the Solesmes

monks are quasi-facsimiles, with indications for rhythm following Mocquereau's theories. That is, the music is written in neumes – single notes and ligatures in square notation – on a four-line staff using C and F clefs and with the rhythm indicated by various signs evolved at Solesmes (they are explained in more detail in the prefaces to most editions of the *Liber usualis*). This method of transcription has been widely accepted even though it does not necessarily constitute the ideal method for revealing the nature of the original sources. Some scholars have modernized the forms of individual notes in editing chant: they write round black note heads (that is, present-day crotchets without stems) for individual notes, and tie together by a slur series of notes originally written as ligatures.

Some editors of secular medieval monophony, such as VanderWerf, advocate editing the songs of trouvères and troubadours in similar fashion, as a series of stemless note heads, neutral in rhythm. Some earlier scholars, notably Aubry and Beck, devised the theory that all or most trouvère songs were sung in modal rhythms, and they imposed their views in their editions of secular monophony. Editions of medieval secular songs have thus largely depended on an assessment of the nature of the rhythm, which was not clearly indicated by the sources. While many present-day scholars reject the modal theories, no consensus of opinion has been reached about the best way to present the music, either in neutral rhythms or in a way that leaves the individual scholar or performer free to make his own judgments.

None of the manuscripts containing early medieval polyphony – neither the 12th-century Codex Calixtinus associated with the pilgrims of Santiago de Compostela in Spain, nor the several sources that reveal the 12th-century repertory of the monastery of St Martial in Limoges – indicates with certainty the rhythm of the music. As with chant and secular monophony, the principal difficulty in preparing editions of these repertoires involves the method devised to indicate rhythm. Some scholars (Bruno Stäblein, for example) have imposed modal rhythms on the music, others (like Theodore Karp) attempted to assign particular meanings to notational signs, such as two-note (binary) ligatures; and still others (notably Friedrich Ludwig and Higiní Anglés) offered transcriptions either in free rhythms like those of plainchant, or in time values determined by a subjective interpretation of the sense of the music. The latter sort of transcription makes no claims to historical authenticity, of course, but offers a method of performing the music today.

13th-century motets and the two- and three-part organa associated with the Cathedral of Notre Dame in Paris in the 12th and 13th centuries are more clearly notated with respect to rhythm than earlier manuscripts. Many scholars hold, for example, that two-part organa in the style of Léonin were originally sung with modal rhythms, but they disagree about transcriptions of particular compositions. Many of the details in the edition of the *Magnus liber* offered in William Waite's *Rhythm of Twelfth-century Polyphony* (1954), for instance, have been challenged by other medievalists.

Later organa in the style of Pérotin and 13th-century motets are generally notated in a manner that clearly differentiates between longs and breves, but often leaves smaller note values ambiguous: a circumstance that partly explains why notational styles changed so rapidly

during the 13th century, and why modern scholars disagree over the merits of editions and transcription methods. Moreover, much of the polyphony of the late 12th and 13th centuries consists of compositions constructed by adding lines to previously written pieces or by incorporating elements of pre-existent musical material into the new work. Two-part clausulas (composed as sections of organa), for example, can be transformed in various ways into two- or even three- or four-part motets with the addition of new texts and new melodic lines. Perhaps critical editions of this music should include all the available related compositions (even though the transformations sometimes involve considerable changes of detail), a task Hans Tischler set himself in preparing an edition of the earliest motets. A central problem of planning such an edition is the difficulty of incorporating all the information from a complex of compositions into easily readable form.

By the 14th century, notational systems had been devised capable of recording unambiguously almost every conceivable rhythm (the French system, explained by Vitry, is more flexible than the Italian, and eventually replaced the latter everywhere in western Europe). Apart from solving the not inconsiderable problems of transcribing rhythmically difficult passages and eliminating the errors of the original scribes, editors of 14th-century music do not have to face fundamental issues about the meaning of notational signs that editors of earlier music must deal with. On the other hand, 14th-century music does contain a number of mensuration signs – C, Ċ, O and Ȯ, for example, and the letters that indicate Italian *divisiones* – which presumably establish tempos and rhythmic relationships according to a simple arithmetical scheme. Moreover, by the end of the 14th century notation had become so complicated, partly through the addition of special signs invented to express composers' rhythmically intricate conceptions, that the correct rhythm is not always easy to determine, and a transcription into modern notation may obscure the character of the original. Thus Willi Apel, in his editions of late 14th-century French music, sometimes included alternative versions above the staves to clarify details of the original notation (and his editions have been criticized as containing errors of transcription). Some editors of 14th-century music, and especially of isorhythmic motets, attempt to offer a simple analysis of the structure of the music in the way it is barred: that is, the cantus firmus in the tenor voice is presented in longer bars than the faster-moving upper voices, and double bars or more heavily printed barlines mark off repetitions of the tenor's rhythmic patterns or pre-existent melody.

The convention has grown up that most music of the *Ars Antiqua* – that is, of the late 12th and early 13th centuries – be transcribed in a reduction of 8:1, with the original breve equal to a modern crotchet. Music of the 14th century and early 15th is generally transcribed in a reduction of 4:1, an original breve equalling a modern minim; Renaissance music is now often transcribed in a reduction of 2:1 or even with no reduction at all. Reducing the original note values and setting down the rhythms in a way intelligible to modern musicians and yet true to the sources are among the principal problems of editing medieval music, once the fundamental difficulties of establishing the literary text and the music (assembling and evaluating all the known sources for each composition) have been dealt with. So

little is known of the performing conventions of the Middle Ages that editors have (probably wisely) avoided adding directions for performance more detailed than *musica ficta* and text underlay.

3. MUSIC OF THE 15TH AND 16TH CENTURIES. Unlike medieval manuscripts, 15th- and 16th-century musical sources offer no fundamental ambiguities about the notation of rhythm, save for a few relatively unimportant details, such as the transcription of *minor color*. (Coloration – the use of red notes or filled-in note heads to designate variations from normal note values – generally indicates triplets, usually at the level of breves and semibreves, *minor color*, consisting of a blackened semibreve followed by a blackened minim, however, is more often transcribed in dotted note values, as a dotted quaver followed by a semiquaver in the normal reduction of 4:1, a solution challenged by some scholars.) One outstanding difficulty in transcribing Renaissance music – perhaps the chief remaining ambiguity of the mensural system – concerns the interpretation of proportions, those mensuration signs that indicate changes of tempo or of rhythmic relationships according to a simple arithmetical scheme. For example, a number of signs designate a shift from duple to triple mensuration, among them 3, 3/2, C³ and C³. Most of them indicate either *proportio tripla* (a tempo three times as fast as the original), or *proportio sesquialtera* (a tempo one and a half times as fast as the original, with three semibreves, say, of the new tempo equal to two of the old), but scholars do not agree either about the meanings of particular signs (which may, indeed, have been used inconsistently by scribes) or about the solution of particular passages. Even the simplest proportional sign, Ċ, which designates duple proportion (note values twice as fast as normal), apparently did not have a completely fixed meaning. It became the most common mensuration sign for most late 15th- and early 16th-century music, and by then may merely have suggested a tempo slightly faster than C. On the other hand not infrequently a composition was copied under the sign C in some manuscripts and under Ċ in others, but with the same note values, to confuse the situation further, a few compositions from the late 15th century are copied under the sign C in some manuscripts and under Ċ in others, but with the note values halved. Towards the middle of the 16th century, moreover, C came to identify special repertoires, such as madrigals notated with many small values – so-called *madrigali a note nere* or *madrigali cromatici* (the latter because of the fast notes and not the presence of accidentals) – and it may be argued that such compositions ought to be transcribed at a different rate of reduction from the main corpus of mid-16th-century music.

The designation of simple triple and duple proportions are among the least complex of the problems facing editors of certain repertoires of Renaissance music. Ockeghem, for example, on occasion made use of extremely intricate proportional systems, and Heinrich Isaac's *Choralis constantinus* poses similarly difficult questions of interpretation. The meaning of the proportional signs is relatively clear when two or more are used simultaneously, since the melodic lines fit together in only one correct way; it is more difficult to interpret proportional signs used successively, because there is no equally convincing way to prove the correctness of the editor's interpretative decision. In general, an editor

should include in his edition the original mensuration signs, so that the reader can challenge editorial decisions which, as we have seen, may affect the rate of reduction.

As complicated as the proportional system is, however, its decipherment does not usually constitute an editor's main problem, since most 15th- and 16th-century music is not notated with complicated combinations of mensuration signs. Rather, the principal difficulties in editing most Renaissance music generally come about either from the uncertainty of determining the provenance and date of the sources, or because composers left many decisions to performers and hence did not fix them in writing. Many 15th- and 16th-century compositions appear in a number of manuscripts and printed volumes of music. Very few of the sources can be shown to be in the hand of the composer, or even to have been prepared in a city or court at a time when the composer was active there. Some sources date from after the composer's death, and some come from places where he never worked. In short, it is seldom possible to be certain that the composer himself supervised the preparation of his music, or that he would have approved the form in which it appears in the sources. The first and often the most difficult and time-consuming task of the editor of Renaissance music is to assemble and evaluate all known sources in an effort to determine which is closest to the composer's conception.

Having compared the sources, established their relationship to one another, and dealt with all variant readings, the editor is still faced with the fact that most 15th- and 16th-century music has survived in a form that leaves undetermined some features that were later considered to be a part of the composer's original conception, notably *musica ficta*, text underlay and scoring. Apparently these were aspects of the music that performers varied to meet different circumstances of performance, hence there is no single correct way of editing, or performing, the music (since there was no single 'correct' version). As composers became more concerned to write a kind of music that closely reflected both the form and the meaning of the texts they set, they began to invent melodic lines to fit single words, phrases or even complete texts. Beginning with the later works of Josquin and the music of Adrian Willaert – that is, during the first half of the 16th century – music came to express either the form or the content of the words, or both, so well that problems of text underlay either disappear, or become easier to solve, especially since several theorists (Lanfranco, Zarlino and Stocker) set down rules for adding words to music. But accidentals were applied to written music not only following the conventions of *musica ficta*, but also taking into account the limitations of certain instruments, and, to judge from the corpus of lute intabulations of vocal music published during the 16th century, personal taste. And most music could be sung *a cappella*, or with instruments doubling or substituting for singers, or played by instruments alone. Thus the conventions of performance during the Renaissance present the modern editor with a quandary. Either he fixes in print a single possible reading of a piece, at the risk of misleading modern scholars and performers by suggesting to them that his version is 'definitive', or he leaves open all the choices that the composer gave performers, and risks omitting sufficient information to allow the composition to be performed or even studied intelligently without being subjected to a further and possibly more conjectural editorial process.

In transferring the separate parts of the original sources into modern score, the editor must decide whether to use bar-lines, *Mensuralriche* or some more radical procedure. The convention has grown up that editors should precede the actual transcription by a few bars in quasi-facsimile, indicating the original clefs, key signatures, time signatures and one or more of the original note shapes (to remind the user of the rate of reduction). Most modern editors substitute modern clefs (treble, bass and transposing treble) for the original C clefs, and indicate ligatures by square brackets above those notes tied together in the source, and coloration by interrupted brackets.

A special problem arises in transcribing the tablatures for lute, guitar, cittern and other plucked string instruments that began to be copied and published in the 16th century. Tablatures indicate which fingers are to be pressed down on the fingerboard, and in which order; they do not specify pitches. Transcriptions into staff notation thus invariably limit the player's choice to an instrument tuned to a particular pitch. Moreover, tablatures do not show how long each note is to sound, but merely specify when it should begin. Accordingly, a literal transcription will obscure the part-writing implied but not explicitly set down in the tablature. Some modern editors (Schrade, Gullino and Lefkoff, for example) have published 16th-century lute music on single staves, in the manner of guitar music, but the preferred method of transcription (recommended, for example, by the colloquium on lute music sponsored by the Centre National de la Recherche Scientifique in Paris in 1957, and described in the report on the meetings, *Le luth et sa musique* CNRS Neuilly-sur-Seine 1957) is to write out the implied contrapuntal texture on two staves, as in keyboard music, even though such a procedure may occasionally produce results that cannot be played literally on the instrument for which it was intended (for example, when one note is sustained against another, although both must be played on the same string).

4. MUSIC FROM 1600 TO 1750. Some of the more difficult editorial problems of medieval and Renaissance music do not apply to music written after 1600. The editor of Baroque music need not, for example, concern himself with the propriety of adding bar-lines when transforming sets of parts into score, for the convention of the bar-line was firmly established in the 17th century (even though it was often applied inconsistently; the editor must decide whether to preserve the details of the source or adopt modern conventions). Baroque sources generally indicate more clearly than earlier manuscripts and printed books how the syllables of text are to be added to the notes in vocal music; and accidentals are more copiously supplied in Baroque than in earlier sources (Donington's *A Performer's Guide to Baroque Music* explains in detail how different Baroque conventions concerning accidentals were from modern practice, he offers excellent advice on translating these discrepancies into sound editorial policy).

Some of the problems of editing Baroque music, however, are in principle no different from those facing editors of earlier music. The first, that of assembling, comparing and evaluating all known sources of a composition, remains. In many cases, the process of identifying the best source is easier for Baroque than for earlier music, because more autographs and more edi-

tions supervised by the composers themselves survive (which is not to say that source evaluation is any less important). The recent study of the sources of Bach's cantatas has forced a revision of the chronology of those works; the continuing evaluation of Handel's manuscripts will certainly produce versions of his music closer to his own conception than those now available; and similar investigations, not yet undertaken, of the manuscript sources of music by other composers (for example Schütz) may lead to reassessment of both the modern editions and the chronological order of their works. Moreover, critical editions of compositions in certain genres – 17th- and 18th-century operas and cantatas, for example – can be made only after a search for concordances among many manuscripts hitherto little studied. On the other hand, autographs, authorized copies, and early printed editions of music by Bach, Handel and Schütz necessarily constitute the principal core of material used in the preparation of critical editions of their works, just as, for instance, the 28 volumes of manuscripts from Marc-Antoine Charpentier's own library, now in the Bibliothèque Nationale, or the three sets of *grands motets* (two manuscript and one printed) by Michel-Richard de Lalande, will inevitably become the most important sources for critical editions of the works of those composers.

Certain features of Baroque music create editorial difficulties special to that period, notably the realization of figured basses, the indication (or otherwise) of wholly or partly unwritten traditions of ornamentation, and the interpretation of directions about performance that are inconsistently applied. There is no completely satisfactory solution to the dilemma posed by the presence of a figured bass, given that composers intended performers to prepare their accompaniments themselves and to vary them according to inclination and performing conditions. The modern editor may choose to leave the figured (or unfigured) bass unrealized, following the composer's intentions but possibly hindering a satisfactory performance of the work by insufficiently trained modern performers. He may choose to realize it in what he takes to be a stylistically authentic manner, in which case his version may be not only subjective and idiosyncratic, but also possibly inappropriate for some circumstances and misleading to performers who may (mistakenly) take it as definitive. He may choose to offer a very simple accompaniment, indicating the correct harmonies and arranged in a way to facilitate a more elaborate version by an inventive performer; but that solution leaves him open to charges that he is unimaginative and insensitive to the style of the music. Too many editors prepare a thick, full accompaniment in four real parts, which demonstrates their proficiency at academic counterpoint but does not supply an adequate version for intelligent performers.

The convention has grown up that signs used to indicate graces – ornaments on a single note or used to connect two notes, such as trills, mordents, turns, appoggiaturas and the like – should be left in modern editions as they were in the sources, with some explanation of their meaning, if need be, added by the editor in footnotes or prefaces. That solution seems to be preferable to the writing-out of such ornaments, not only because of possible ambiguities in interpreting obsolete signs (and ambiguities inherent in the signs themselves), but also it preserves the psychological difference between understanding a note as principal or as decora-

tion. If further ornaments are added by editors, they should be clearly distinguished from the originals, by the use of brackets or a different typeface or by some other means. No similar convention about divisions or *passaggi* – longer melodic variations performed in some circumstances by Baroque musicians – has grown up. Some editors print their own alternative, highly decorated versions of, for example, Italianate slow movements (where such divisions were commonly applied, and may even have been obligatory) above the staff, in the manner of Telemann's *Methodische Sonaten*, where alternative versions, highly decorated, are supplied for specimen movements of almost every sort. Some editors suggest in a footnote or preface that such divisions ought to be added, but make no specific suggestions; others merely print the simple version without comment. Editors of Baroque operas, on the other hand, seldom include proposals for the varied repeat sections expected of singers in da capo arias or suggest which phrase-endings in recitatives can or should be sung with appoggiaturas (as for example is done in the Neue Mozart-Ausgabe).

Directions for performance – dynamics, phrase markings and the like – are often entered inconsistently into Baroque sources. One or two slurs may suffice to suggest how an entire section should be phrased, a rhythm may be dotted for the initial bar and left plain for the rest of the section; a section marked *p* may imply that the previous section needs to be played *forte*. In such cases an editor is doubtless justified in making explicit what probably were the implicit intentions of the composer. But in his zeal for consistency he must guard against making interpretative decisions that are properly within the province of the individual performer. Thus he ought not to resolve some kinds of inconsistency that are open to more than one acceptable manner of performance. Passages in which triplets coincide with dotted figures, for example, ought to be left as they were in the original score, since there is room for disagreement about which rhythm should predominate or whether the two should sound simultaneously. Similarly, it may be prudent to leave unmodified upbeat figures in which the first note should almost certainly be played short since disagreement is often possible about the 'correct' resolution of such passages, some discretion in the matter may well have been left to the Baroque performer. To write out passages where overdotting is implied or where *notes inégales* are appropriate (in 17th- and 18th-century French music, and music influenced by French practice) would be even more questionable, but the wise editor will indicate clearly the possibility of alterations to the printed score in small notes or rhythmic symbols above the staff, a preface, or footnotes, and not obscure the original notation.

5. MUSIC FROM 1750 TO THE PRESENT DAY. Late 18th- and 19th-century composers marked their scores much more completely than earlier composers had done. Beethoven best represents this new attitude towards written music: he specified dynamics, phrasing and articulation, and even attempted to fix tempo precisely with the aid of the newly invented metronome (more precise than the measurements by heartbeat, walking speeds or pendulums used by some Baroque theorists). Most later composers followed his example by preparing their scores in so detailed a way that virtually every decision about performance was set down in writing.

leaving performers merely to follow their instructions. The composers' care in controlling the details of their work also affects the role of the editor, who is called upon to make many fewer musical judgments. Indeed, the new relationship between written music and the way it was intended to be performed constitutes the biggest single difference between editing music written after the late 18th century and earlier music.

Since an editor of late 18th- or 19th-century music may often hope to discover the composer's intentions with regard to the smallest details of the score, he must be doubly on his guard to identify the best possible source on which to base his edition. This goal is not always easy to accomplish, partly because so few basic bibliographical works – necessary to identify and locate copies of compositions – deal with the 19th century. Moreover, in some genres (such as early 19th-century German opera) full scores were never published, and manuscript copies have either been lost or are difficult to locate. Even when autographs, authorized copies or first editions supervised by the composer exist, an editor must still sometimes reconcile contradictory evidence found in apparently equally reliable sources. Thus the three versions of some of Chopin's music published in various European cities during his lifetime include significantly different readings; there seems to be no way to determine which source most reliably records the composer's intentions. In dealing with longer works, like operas, where cuts or conflations of two or more versions (often originally made to suit particular singers or opera-house circumstances) have become traditional even though they distort the composer's ideas, editors can sometimes exert a crucial influence in correcting a corrupt situation.

Since late 18th- and 19th-century scores were so frequently issued in a form that suggests the composer's expectations are fully explained, editors must take extra precautions, too, to mark clearly those compositions or passages from compositions that are not fully written out, or where the performer still has options from which to choose. Thus the editor of Mozart's piano concertos should make his readers aware of the fact that the piano parts include some abbreviations (simple chords where arpeggios were probably intended, passages in slow movements that should be ornamented, figured basses during *tutti*s, and the like). Moreover, the editor should alert the performer or scholar to the passages where cadenzas or 'lead-ins' may be added, and to the sorts of cadenza that might be stylistically appropriate. Similarly, editors of 19th-century operas should explain the conventions that permitted singers to decorate their lines, and perhaps they should even indicate where and how such decoration might be applied.

As 19th-century scores are so fully marked, editors must serve the same function as copy-editors of prose, that is, they must try to make the work as consistent within itself as they can in an effort to clarify the composer's real intentions. Thus, if a passage is written differently when it repeats (if, for example, the first theme group in a sonata-allegro form has dynamics or articulation different in the recapitulation from those in the exposition), the editor must decide whether or not the differences are intentional; if they are merely oversights on the composer's part, he must reconcile them or at least call attention to them in a footnote. An editor must also consider carefully whether or not to modify passages where the composer's intentions apparently

had to be modified to take into account the limitations of the instruments for which he was writing, limitations that do not exist on present-day instruments. Thus the editor of Beethoven's symphonies must decide whether to adjust those passages where notes were omitted that are impossible to play on a hand horn but entirely feasible on a modern valve horn. In 'correcting' such passages, an editor might argue that he is following scrupulously the composer's real intentions, even while departing from his explicit instructions. Such 'improvements' must be made sparingly, and must be clearly marked as editorial additions, however, for such a line of reasoning easily leads to over-confidence and encourages an editor to suppose that he knows more than the composer.

HOWARD MAYER BROWN

Editio Musica Budapest. Hungarian firm of music publishers. It was founded on 1 July 1950 as Zeneműkiadó Vállalat, the successor of the Hungarian music publishing companies Rózsavölgyi és Társa, Rozsnyai, Kálmán Nádor, Ferenc Bárd, Magyar Kórus (publishers of choral music) and Imre Cserépfalvi (the youngest of them). Editio Musica is now the only music publishing firm in Hungary, in accordance with the socialist reorganization of economic life.

The first publication was the first book of Bartók's *Gyermekeknek* ('For children'), which represented the guiding principle of the enterprise: 'to serve Hungarian music, particularly music for the training of musicians and the education of the common man wishing to improve and advance his or her knowledge'. The first managing director, László Korvin, and the artistic director, András Rékai, had to rely on 'outworkers' for editorial and similar work; but in 1953 the firm acquired its own printing works and thus was able to make long-term plans and cooperate with music publishing companies outside Hungary. In 1955 Béla Tardos, a professional pianist and composer, was appointed director; he organized the editorial side into two separate departments, one for music and another for musical literature, and encouraged the employment of professional musicians with practical ability and theoretical knowledge. From the 1960s connections were established with similar undertakings abroad, and in

1961 László Eöszé was appointed deputy director and artistic manager. After the death of Béla Tardos (1967) László Sarlós was appointed director.

The firm is active in six main areas: publishing contemporary Hungarian music; early music, particularly from the Esterházy Archives now in the National Széchényi Library, the main series being *Musica Rinata*; major Hungarian works, including early Hungarian music and a new complete edition of Liszt; modern Hungarian classics, including works by Bartók, Dohnányi, Kodály and Leó Weiner, and a series edited by the Bartók Archive of the Hungarian Musicological Institute; educational works (the best-known aspects of the company); and musical literature, notably the collected editions of writings by Bartók and Kodály, the folk music collections edited by László Lajtha, and *Melodiarum Hungariae Medii Aevi* edited by Benjámín Rajeczky.

Editio Musica Budapest has exchange arrangements with Boosey & Hawkes (London, Paris and Bonn), Eulenburg (Zurich), Suvini Zerboni (Milan) and Universal (Vienna).

JOHN S. WEISSMANN

Editions, historical. The term 'historical edition' may be applied to any music publication that is devoted to a past repertory. The class of historical edition most valuable for the study of original versions of past music is the 'scholarly' or 'critical' edition. Prepared on the basis of a critical evaluation of all known primary sources, this class of edition is designed to present the most authoritative authentic version of its contents, with editorial material clearly distinguished from the original. The scholarly edition may be contrasted with the 'practical' or 'performance' edition, which is usually produced from unstated or secondary sources and may incorporate additions or changes designed to help the modern performer.

Historical editions are subdivided here according to content. 'Collected editions' refer to those publications that present a complete repertory, either the complete works of a single composer (also known as a 'complete edition' or 'Gesamtausgabe') or those multi-volume series in which the majority of individual volumes present a unified musical repertory derived from the same or from closely related original sources (also known as 'Denkmäler' or 'monuments'). 'Anthologies' refer to historical publications of selections and excerpts from a variety of musical sources; these are subdivided into 'small anthologies' and 'extended anthologies' (containing five or more volumes published over a period of five or more years).

Facsimile series (not, strictly speaking, editions), in which sources are reproduced with or without additional editorial comment, are included under collected editions of music and collected editions of theoretical works.

1 Introduction 2 Single-composer complete editions 3 Other collected editions 4 Collected editions of theoretical works 5 Anthologies: (i) Extended (ii) Small vocal (iii) Small instrumental (iv) Small general.

1. INTRODUCTION.

(i) *Historical editions to c1850.* Until the second half of the 18th century music publications were devoted principally to new or nearly new works. When an older work was printed, it was almost certainly one that was sufficiently popular to have remained in the performing

repertory of the locality of the publication: for instance, works of Palestrina were still printed in 1689 in Rome (*RISM* 1689¹), and Tudor church music was published as late as 1641 in London (1641²). The awakening interest in music of the past which produced the first modern histories of music also led to the first true historical editions, and it is significant that early writers of music histories also edited historical music collections (Burney's *La musica che si canta . . . nella Cappella pontificia* (1771) and Martini's *Esemplare, ossia Saggio . . . di contrappunto* (1774–5)). Paralleling this interest in the revival of forgotten music was the recognition that music of the past still in use ought to be presented accurately in its own terms, and editors began to search out original sources in order to produce authentic readings. Early examples of such editions are Boyce's *Cathedral Music* (1760–63) and Arnold's publication of the same name (1790). The same interest in an accurate musical text also led to efforts to produce uniform editions of the entire musical works of favourite individual composers. The first of these, also edited by Arnold, was intended to comprise the works of Handel, but was never completed (1787–97). Other early complete-works editions similarly remained unfinished. Mozart (1798–9 and 1798–1806), Haydn (1802–43), Clementi (1803–19), Beethoven (1828–45), Schubert (c1835) and again Handel (1845–58).

Apart from these unsuccessful attempts at complete editions, most historical editions of this period were small anthologies containing vocal polyphony from the 16th century onwards. Instrumental anthologies began to appear around the turn of the century in smaller quantity, they include Cartier's *L'art du violon* (1798) and Clementi's *Selection of Practical Harmony* (1801–15). By the early 19th century the success of the small historical anthology was such that more extensive publications and series began to appear, such as Latrobe's *Selection of Sacred Music* (1806–25) and the *Auswahl vorzüglicher Musikwerke in gebundener Schreihart*, published in 16 volumes under the auspices of the Königl. Akademie der Künste in Berlin (1835–41).

A few early editors prepared anthologies with quite specific limitations, thereby foreshadowing the future development of the historical edition. Burney's collection cited above presents only music performed in the papal chapel during Holy Week, and Vincent Novello's *The Fitzwilliam Music* (1825) confines itself to works of Italian composers found in manuscript in the Fitzwilliam Museum. A geographically selected repertory is presented in Cichocki's *Chants d'église . . . des anciens compositeurs polonais* (1838–9), and a special and cohesive repertory is singled out in F. H. von der Hagen's *Minnesinger* (1838–61). The second volume of Crotch's *Specimens of Various Styles* (c1807–9) may be considered the first history of music in examples.

Editorial criteria did not, properly speaking, exist during this early period. Each editor followed his own judgment, which was often tempered by an assumption that the integrity of the source could be superseded by his own more advanced musical knowledge. For instance, having made an agreeable piano accompaniment from a figured bass line, an early editor could see no reason to encumber his edition with the now unnecessary figuration. He was also likely to accept a single source as authoritative in attributions, and rarely sought out concordant sources. Furthermore, many aspects of early notation were clarified only by later

scholars. For these reasons, early historical editions are useful today less for their content than as illustrations of the history of music scholarship.

(ii) *Historical editions c1850–c1950.* A second phase in the development of historical editions may be said to have started around the mid-19th century, characterized by the publication of large collected editions in which completeness became the rule rather than the exception, and by publications in which the criteria of modern editing began to be established. The new phase was first apparent in collected editions of single composers. In 1851 the Bach-Gesellschaft issued the first volume of a critical edition of Bach's complete works, inaugurating an era of vigorous activity in complete editions that lasted until World War II. A very large number of these were published by Breitkopf & Hartel in Leipzig, with initiation dates as follows: Bach (1851), Handel (1858), Palestrina (1862), Beethoven (1862), Mendelssohn (1874), Mozart (1877), Chopin (1878), Schumann (1880), Grétry (1884), Schubert (1884), Schütz (1885), Lassus (1894), Berlioz (1899), Schein (1901), Victoria (1902), Haydn (1907) and Brahms (1926). Other sets attaining completion or substantial proportions during this period are: Purcell (1878), Sweelinck (1894), Rameau (1895), Obrecht (1908), Josquin Desprez (1921), Scheidt (1923), Monteverdi (1926), Monte (1927), Musorgsky (1928), M. Praetorius (1928), Lully (1930), Byrd (1937) and Pergolesi (1939), as well as several smaller complete presentations, such as Adam de la Halle (1872) and Machaut (1926). While some series failed to attain their goal of completeness (such as the Lassus edition of 1894–1926, which ceased before publishing any masses, and the Haydn edition of 1907–33, abandoned after 11 volumes), most are at least reasonably complete, and many remain the standard reference editions of today.

Collected editions of other kinds also first appeared during this period. An early example of the new type which became a model for later publications is Chrysander's *Denkmäler der Tonkunst* (1869–71). Two features of this edition that have become standard in later large-scale publications are the use of different editors for individual volumes, coordinated by a general editor, and sub-series (in this case, the complete works of Corelli and Carissimi, proposed, but not completed in this series). Eitner's more extensive *Publikationen alterer praktischer und theoretischer Musikwerke* (1873–1905) shows the same tendency to completeness within individual volumes or sub-series, several of its volumes being devoted to complete 16th-century printed sources. Less praiseworthy is his double numbering system (volume and Jahrgang), a practice used widely in later collected editions and one that has created confusion for both librarians and researchers.

The repertory of collected editions is generally limited, often to a specific geographical region. *Denkmäler deutscher Tonkunst*, initiated in 1892 by a committee of German musicians including Chrysander, Brahms, Spitta, Joachim and Helmholtz, with the support of the German government, was the first major national series. It was soon followed by the *Denkmäler der Tonkunst in Österreich* (1894), also supported by government funds, under the general editorship of Guido Adler. So predominant did the geographical orientation of series become that many bibliographic lists of historical editions observe a subdivision by

country (as in the excellent listing by Basso cited below).

Along with complete-works series and other kinds of collected edition, the older anthology type, and particularly the extended anthology of five or more volumes, continued to appear, exemplified by the well-known publications of Proske (*Musica divina*, 1853–59) and Maldeghem (*Trésor musical*, 1865–93). These and other anthologies remained for decades the only modern sources of a sizable body of music, particularly the Renaissance repertory, not then available in complete works or collected editions, and many have still not been completely superseded.

The growing awareness in this period that a modern edition should mirror the composer's intention in terms of his own time rather than repaint it in terms of the editor's time is demonstrated by the development of more sophisticated techniques of editing. Although the individualistic and intuitive approach continued to be used, editors increasingly felt it important to indicate original notation (such as ligatures and continuo figures), note editorial changes, and compare and evaluate sources.

(iii) *Recent historical editions.* A new phase in historical editions started shortly after World War II with a strong upsurge in the number of new publications and a renewal of activity in many dormant series. This growth can be attributed partly to the solid foundation laid by earlier historical editions, which had to some extent facilitated the rapid growth of the study of historical musicology. Another important factor is the advance in reprographic techniques, which has enabled scholars to consult a variety of widely distributed sources by means of relatively inexpensive microfilms or prints, and publishers to produce editions and facsimiles more economically as well as to reprint important earlier editions for wider distribution.

An important trend in recent years has been the reassessment of many older complete-works sets, leading in some cases to revised editions (e.g. the works of Purcell, rev. 2/1961–, and Victoria, rev. 2/1965–) and in others to the appearance of supplementary series containing material omitted in earlier series (e.g. Hess's 14-volume supplement to the old Beethoven edition and the Leipziger Ausgabe of Mendelssohn's works). But the most important result of critical re-examination has been the commencement of entirely new complete editions under the direction of international committees of scholars, such as the new complete works of Bach (initiated in 1954), Handel (1955), Mozart (1955), Beethoven (1961), Schubert (1964) and Berlioz (1967). Most of these new editions propose a broader coverage than their predecessors, including such material as the composer's arrangements of other works, early versions, sketches, documentary or pictorial biographies, and facsimiles.

Numerous other complete-works series have appeared in recent years for composers whose works have not previously been published in this way. Many are extensive separate publications (e.g. the complete editions of several Russian composers published by the Moscow State Music Publishers), while others are embedded in other collected editions, distributed at random like the Morales edition in *Monumentos de la música española*, or in proper sub-series such as the Berwald edition in *Monumenta musicae svecicae*. Extremely important in this last category is *Corpus mensurabilis*

musicae, a collected edition devoted mainly to complete editions of medieval and Renaissance composers.

Activity in the publication of other collected editions has paralleled that in complete editions: many older sets or parts of sets are appearing in revised editions, and many new series have been inaugurated. A high proportion of these select a coverage limited by geographic or chronological bounds, including several new national sets as well as a growing number devoted to smaller local divisions, such as territories, counties or cities.

Three types of publication previously found only occasionally are now appearing in increasing quantity. The first is the edition that includes both editorial information needed by the scholar and that required for a modern performance, while retaining the relatively inexpensive format of the typical performing edition. Early examples of this type are *Das Chorwerk* (initiated in 1929) and *Hortus musicus* (1936), and two among a host of recent series are *Le pupitre* (1967) and *Musica da camera* (1972). The second type of publication enjoying greater popularity is the facsimile series. Of the few that can be cited from the previous period, only *Paléographie musicale* (1889) attained substantial size, a more recent example is *Veröffentlichungen mittelalterlicher Musikhandschriften* (1957). A third type of modern publication which was rare in earlier periods is the extended series devoted exclusively to music theory, either editions of the original (as in *Corpus scriptorum de musica*, 1950–), translations (as in *Musik Theory Translation Series*, 1963–) or facsimiles (as in *Documenta musicologica*, 1st ser., 1951–).

Editorial techniques used in modern historical editions are discussed in EDITING. A critical commentary (or textual commentary; in German *Kritischer Bericht* or *Revisionsbericht*) is generally provided to discuss any pertinent aspects of the original source(s) that cannot conveniently be incorporated into the printed musical text; this is frequently issued as a separate publication. The need for additional commentary will vary according to the nature of the music concerned, as, for example, translations of texts in obsolete languages, evaluation of multiple sources, inclusion of related music (e.g. the model of a parody mass), thematic lists of related works, comments on performing problems, biographies of obscure composers and facsimiles of original sources.

2 SINGLE-COMPOSER COMPLETE EDITIONS. An attempt has been made to list the major complete editions, including those that from their titles appear to have been intended as such. Also included are editions of a composer's complete works in a particular medium if these comprise almost his entire output. The complete editions of minor composers which form only part of a volume have been omitted. Titles (omitting the composer's name), editor(s) (if they are named on the title-page), sponsoring organization(s) and publication details as they appear in the edition are given. If no more volumes are to be published, the date of the last volume and the total number of volumes in the edition is provided, the total number of volumes is not given if the edition is complete in one volume, or if the edition is still in progress. (The details of publication for Russian editions are in some cases incomplete.)

Abel, C. F. *Kompositionen, gesammelt neuengerichtet*, ed. W. Knape

(Cuxhaven: Knape, 1958–74), critical commentary published separately. Adam de la Halle *Oeuvres complètes (poésies et musicales)*, ed. E. de Coussemaker, Société des Sciences, des Lettres et des Arts, Lille (Paris: Durand & Pédone-Lauriel, 1872/1965).

Agnicola, A.: *Opera omnia*, ed. E. R. Lerner, CMM, xxii/1–5 (1961–70), 5 vols.

Alain, J.: *L'œuvre d'orgue* (Paris: Leduc, 1943–6), 3 vols.

Albert, Prince Consort: *The Collected Compositions*, ed. W. G. Cusins (London: Metzler, 1882/1969).

Albinoni, T.: *Gesamtausgabe der Instrumentalmusik*, ed. W. Kolneder (Berg: Amadeus, 1974–), unnumbered ser.

Arcadelt, J.: *Opera omnia*, ed. A. Seay, CMM, xxxi/1–10 (1965–71), 10 vols.

- Asola, G.: *Opera omnia*, ed. G. Vecchi, AntMI, *Monumenta veronensis*, II (1963-).
- Bach, J. S.: *Werke*, Bach-Gesellschaft, Leipzig (Leipzig: Breitkopf & Härtel, 1851-99/R1947), 61 vols in 47 Jg.
Neue Ausgabe sämtlicher Werke, Johann-Sebastian-Bach-Institut, Göttingen, and the Bach-Archiv, Leipzig (Kassel and Basle: Bärenreiter, 1954), c86 vols planned, in 8 ser., suppl., critical commentary publ separately
- Bakfark, B.: *Opera omnia*, ed. I. Homolya and D. Benkő (Budapest: Editio Musica, 1976-), 6 vols planned
- Banchieri, A.: *Opera omnia*, ed. G. Vecchi, AntMI, *Monumenta hononiensis*, XII (1963).
- Barbington: after the Barbireau edition was published, Barbireau and Barbington were found to be two composers. See Barbireau below
- Barbireau, J.: *Opera omnia*, ed. B. Meier, CMM, vii/1-2 (1954-7), 2 vols., incl. collected works of Barbington
- Beethoven, L. van: *Collected Works* (Vienna: Haslinger, 1828-45) [inc., missing 3rd and 4th ser. and all after 11th]
Sämtliche Compositionen erste vollständige Gesamtausgabe, ed. F. Liszt and C. Geissler (Wolfenbüttel: Holle, 1857-69) [inc.]
Werke vollständige kritisch durchgesehene überall berechnete Ausgabe (Leipzig: Breitkopf & Härtel, 1862-88/R), in 25 ser.
Supplemente zur Gesamtausgabe, ed. W. Hess (Wiesbaden: Breitkopf & Härtel, 1959-71), 14 vols.
Werke, ed. J. Schmidt-Görg, Beethoven-Archiv, Bonn (Munich and Duisburg: Henle, 1961-), (40 vols planned, in 14 ser.)
- Benevoli, O.: *Opera omnia*, ed. L. Feininger, Societas Universalis Sanctae Ceciliæ (Trent, 1966-), some vols duplicated in Monumenta liturgiae polychoralis Sanctae Ecclesiae Romanae
- Berlioz, H.: *Werke*, ed. C. Malherbe and F. Weingartner (Leipzig and elsewhere: Breitkopf & Härtel, 1899-1907/R), 20 vols in 18 ser. [inc.] repr. with addl items
 New Edition of the Complete Works, ed. H. Macdonald, Berlioz Centenary Committee, London, and Calouste Gulbenkian Foundation, Lisbon (Kassel and elsewhere: Bärenreiter, 1967), 25 vols planned, in 7 ser.
- Berwald, F. A.: *Sämtliche Werke/Complete Works*, Berwald Kommittee, MMS, 2nd ser. (1966), 25 vols planned
- Billings, W.: *Complete Works*, ed. H. Nathan, American Musicological Society, Colonial Society of Massachusetts, Boston (Charlottesville: U. of Virginia Press, 1977).
- Boccherini, L.: *Le opere complete*, ed. P. Carmirelli, Istituto Italiano per la Storia della Musica (Rome, 1970).
- Boely, A. P. F.: *Oeuvres complètes pour orgue*, ed. A. Gastoue N. Dufourcq (Paris: Boreman, 1958-74).
- Bohm, G.: *Sämtliche Werke*, ed. J. Wolgast, Veröffentlichungen des Kirchenmusikalisches Instituts der Evangelisch-Lutherischen Landeskirche in Sachsen, I, III (Leipzig: Breitkopf & Härtel 1927-32, Wiesbaden, rev. 2/1952-63 ed. J. Wolgast and H. Kummerling), 2 vols., rev. in 4 vols.
- Boyvin, J.: *Oeuvres complètes d'orgue*, ed. A. Guilmant and A. Pirro, Archives des maîtres de l'orgue, VI (Paris: Durand, 1905/R1972).
- Brahms, J.: *Sämtliche Werke*, ed. H. Gal (vols i-x) and E. Mandyczewski (xi-xxvi), Gesellschaft der Musikfreunde, Vienna (Leipzig: Breitkopf & Härtel, 1926-7/R), 26 vols.
- Brassart, J.: *Opera omnia*, ed. K. E. Mixter, CMM, xxxv 1-2 (1965-71), 2 vols.
- Bruckner, A.: *Sämtliche Werke kritische Gesamtausgabe*, ed. R. Haas and A. Orel, Nationalbibliothek, Vienna, and Internationale Bruckner-Gesellschaft (Vienna, 1930-37, and Leipzig, 1938), Musikwissenschaftlicher Verlag, 1930-44/R), some with critical commentary [inc.], Vienna, rev. 2/1951 ed. I. Nowak, incl. rev. of some vols. publ. in 1st edn.
- Bruhns, N.: *Gesamt Ausgabe der Werke*, ed. F. Stein, FDM, 2nd ser., *Schlewig-Holstein und Hansestadt*, I, II (1937-9), 2 vols [inc.]
- Brumel, A.: *Opera omnia*, ed. B. Hudson, CMM, v/1 6 (1969-72), 6 vols.
- Buxtehude, D.: *Werke*, ed. W. Gurlitt (vols i-III), G. Harms (III-IV), H. Trede (V-VII), A. Adrio and D. Kilian (VIII). Glaubensgemeinde Ugrino (I-IV) (Klecken, later Hamburg: Ugrino, 1925-58/R1977).
- Byrd, W.: *The Collected Vocal Works* [vols xv-xx, devoted to kbd music, as *The Collected Works*], ed. E. H. Fellows (London: Stainer & Bell, 1937-50, rev. 2/1962-5 ed. T. Dart, 1970 various eds., as *The Collected Works*), 20 vols.
- Cabanilles, J.: *Musici organici opera omnia*, ed. H. Anglés, PBC, IV, VII, XIII, XVII (1927-56).
- Cabezón, A.: *de Gesamtausgabe der Werke/The Collected Works*, ed. C. Jacobs, Gesamtausgaben, IV/1 (Brooklyn, 1967).

The Flute Library, ed. F. Vester (Amsterdam: Knuf, 1973)

Corrette (vi), Delusse (x), Devienne (vii), Fürstenau (viii), Granom (xi), Giann (ix), Heron (xii), Lindsay (xiv), Mahaut (iv), Ribick (xiii), Tromlitz (i ii), J. de Vaucanson (v), others, post-1800 (iii)

Translations, Colorado College (Colorado Springs: Colorado Music Press, 1967)

Aaron (iv), Aurelian of Réôme (iii), Coclenco (v), Enchiridion (vii), Johannes de Grocheo (ii), Lippius (viii), Listenius (vii), Tinctoris (iii)

Veröffentlichungen der Musik-Bibliothek Paul Hirsch (VMPH), ed. J. Wolf (Berlin: Breslau, 1922-30, Kassel: Barenreiter, 1934, and Cambridge: Novello, 1947), for vols of music, see §3 above

Bottrigari (v), Caza (i), Conforto (ii), Listenius (viii), Spataro (vii)

Veröffentlichungen des Fürstlichen Instituts für Musikwissenschaftliche Forschung zu Buckeburg (Buckeburg, and Leipzig: Siegel, 1919-23, and Kistner & Siegel, 1924-); 2nd ser.: *Tafelwerke*, vol. iii devoted to a treatise of Ganassi, for 1st ser., see §3 above

5 ANTHOLOGIES. The anthologies listed below are all printed collections devoted to works in the concert repertoire. Other types not included here

are ethnomusicological collections, tune books, hymnals or other editions designed for liturgical use, or collections with a large proportion of arrangements. Although the list contains some early anthologies of special interest, emphasis has been laid on those published after 1930 because the editorial standards in these publications are generally higher. Earlier editions of special interest, however, have also been included. Because the list is selective only a small number of anthologies devoted to a single type of composition, e.g. sonatas, have been cited. Sheet music series (e.g. *Latin Church Music of the Polyphonic Schools*) and unnumbered series (e.g. *Antica musica instrumentale italiana*, ed. R. Fasano) have been excluded. General editor, sponsoring organization and publication details as they appear in the edition are provided for each entry. Earlier copyright dates are given in angular brackets / . If the anthology contains more than one volume, the number of volumes is also given. A list of composers is provided for extended anthologies of special interest.

(i) *Extended*

- Accademia musicale*, ed. C. H. Sherman (Columbia, Missouri: U of Missouri Press and Mainz: Universal, 1969.). Bach, Biber, Charpentier, Haydn, Holer, Hummel, Martin y Soler, Ordóñez, Scarlatti, Vanhal, Wagenseil.

SYDNEY ROBINSON CHARLES
(lists with JULIE WOODWARD)

Editions Russes de Musique. Russian music publishing firm. It was founded in 1909 by Sergey Koussevitzky and his wife Natalya with the aim of subsidizing the propagation of new Russian music. Any losses were borne by the Koussevitzkys, and all profits accrued to the composers. The venture was highly successful, both artistically and financially. To ensure copyright protection the firm was first legally established in Berlin as the Russischer Musikverlag, with offices in Moscow and Paris, and later in London, New York and Leipzig. The main office was moved to Paris in 1920. Originally, to ensure artistic integrity, selection of works was determined by majority vote of a jury composed of Scriabin, Rakhmaninov, Metner, Ossovsky, Struve and Koussevitzky. However, their rejection of Stravinsky's *Petrushka* was reversed when Koussevitzky threatened to withdraw from the jury. Such conflicts were obviated when, in 1914, Koussevitzky purchased the firm of A. Gutheil, which became an autonomous branch of Editions Russes under his control. Gutheil's catalogue, begun in Moscow in 1880 as successor to the St Petersburg house of F. Stellovsky, already contained important works by Prokofiev and Rakhmaninov, and the purchase included valuable unpublished manuscripts by Glinka, Dargomizhsky and others. From its beginning, Editions Russes offered substantial advances and profit sharing both to promising young Russian composers and established Russian masters. These circumstances, combined with artistic foresight, accrued significant benefits to the composers, the firm and the art. Among the most noteworthy publications are Scriabin's *Prometheus*, Stravinsky's *Petrushka*, *The Rite of Spring* and *Symphony of Psalms*, as well as works by Metner, Prokofiev, Rakhmaninov and Taneyev. Other composers well represented include Arensky, Balakirev, Berezovsky, Catoire, Konyus, Vernon Duke, Grechaninov, Lopatnikov, Nabokov and Ziloti. The firm also published Rimsky-Korsakov's *Principles of Orchestration* in Russian, French, German and English, and the Musorgsky Ravel *Pictures at an Exhibition* (commissioned by Koussevitzky). On 1 March 1947 the catalogue of Editions Russes de Musique was purchased by Boosey & Hawkes who continue to publish much of it and hire out its opera and orchestral works.

ROBERT S. NICHOLS

Edlerawer [Edelawer], **Hermann** (fl. 1440-45). Composer, and Cantor at the Cathedral of St Stephen in Vienna. The assertion that he was a theologian is false. He was merely the reader of replies made by Aeneas Silvius Piccolomini to theses propounded at the University of Vienna (*D-Mbs* Clm. 5311, f. 165). In his *Lauda Sion* the superius paraphrases the chant, and the verse 'In figuris' has an indication for 'faulx bourdon' (in *D-Mbs*). Edlerawer's other compositions are less elaborate and largely functional. They are important as evidence of what is apparently the earliest surviving Viennese polyphony. Fauxbourdon should probably be added to the Credo and *Que corda*, but will not fit the Kyrie, *Beata viscera* and the textless piece.

WORKS

- All Edlerawer's works appear with their ascriptions in *D-Mbs* Clm 14, 274.
- Kyrie domnicale, 2vv (superius paraphrases Kyrie 'Dominator Deus').
- Credo domnicale, 2vv (superius closely follows Credo 1 the

following 'Amen', 3vv, is unrelated)
 Lauda Syon, 3vv (sequence, also in *I-TRmn* 93, superius paraphrases chant, Ct missing from last verse and cannot be replaced by fauxbourdon)

Que corda nostra, 2vv (sequence, text by Notker, superius paraphrases chant, with migration to I)

Verbum bonum, 2vs (sequence, chant in T marked 'Faulx bourdon')

Beata viscera, 2vs (superius closely follows chant)

[textless on f 103], 2vv (form like that of a rondeau)

DAVID FALLOWS

Edle van Ghelenschen Erben. Austrian firm of music publishers, founded as VAN GHELEN.

Edlund, Lars (b Karlstad, 6 Nov 1922) Swedish composer, teacher, conductor and harpsichordist. After attending the Ingesund Music School and the Stockholm Musikhögskolan (1942-7) he went to study further at the Basle Schola Cantorum and elsewhere. He was a church organist (1948-60) and was then appointed to the Stockholm Musikhögskolan as teacher of aural

training, the subject of his internationally known *Modus novus* and *Modus vetus*. Previously a composer of liturgical music, after his move to Gotland in 1971 he produced a number of original, intense and effective pieces. In 1967 he founded the Camerata Holmiae, an ensemble of vocal soloists, which he conducts.

WORKS

(selective list)

Salighsprisningarna [The beatitudes], youth/children's chorus, chorus, fl, elec gui, vc, db, org, 1971, *Elegi* (G Ekelöf), chorus, 1971, rev 1972, *Körstudier I III*, chorus, 1972-3, *Tracce*, hpd, 2 perc, chamber orch, 1972, *Triad* (Hammar skjöld), chorus, wind orch, 1973, *Cirkus* (N Å Nilsson, H Martinson, U Torkhamn, N Ferlin), 4 songs, Bar, pf, 1974, *La cigale et la fourmi* (La Fontaine), S, A, T, B, chorus, 1975, *Nenia* (vocalise), chorus, 1975, 4 ord-språk av Kung Salomo, male chorus, 1975

Principal publishers: Gehrman, Nordiska musikförlaget
